ACKNOWLEDGEMENTS

This Health Assessment of the Glades Region is a subset of the overall Palm Beach County Community Health Needs Assessment, which was complete in December 2016. At the request of the Health Care District of Palm Beach County and the Florida Department of Health in Palm Beach County, the Health Council of Southeast Florida (HCSEF) collected and analyzed both qualitative and quantitative data for both reports specific to the defined areas. Throughout the process, community leaders and residents worked in unison to identify the health disparities present in their communities and address the ill effects of geographic isolation that the communities experience.

The Glades Region Health Assessment was created in large part due to the dedication and participation of Lakeside Health Advisory Board Members. Their voices and input were instrumental throughout this process. Additionally, HCSEF would like to thank the Florida Department of Health in Palm Beach County and the Health Care District in Palm Beach County for the assistance, guidance and funding support for this Community Health Assessment. Furthermore, we would like to extend our sincere appreciation and gratitude to all the community members who participated and contributed to this comprehensive body of work. Their compassion and dedication to this process and to improving the health and wellbeing of residents in the Glades communities in Palm Beach County was invaluable.

Participating Organizations:

FoundCare	School District of Palm Beach County
Genesis Community Health Center	St. Mary's Medical Center
Glades Initiative	Tabernacle Missionary Baptist Church
Health Care District of Palm Beach County	United Way Palm Beach Count

EXECUTIVE SUMMARY

The goal of this report is to identify unmet health needs of community residents and to inform and guide future health planning initiatives to meet those needs within four communities in the Glades region of Palm Beach County. In 2016, the Health Council of Southeast Florida (HCSEF) was enlisted by the Health Care District of Palm Beach County and the Florida Department of Health in Palm Beach County to facilitate a comprehensive, county-wide health needs assessment for Palm Beach County. As part of the Health Assessment Report, data was collected and analyzed on a county level.

Additional indicators and data were collected specific to four identified zip codes in the Glades region to glean more insight into the unique needs of the communities. HCSEF conducted a comprehensive review of secondary data sources to obtain the most reliable and current information for the Community Health Assessment. HCSEF also collected, compiled and analyzed primary data to capture the community's perspective.

This report is organized into four main sections:

1. Demographic and Socioeconomic Profile
2. Health Status Profile
3. Health Resource Availability and Access
4. Community Perspective

The demographic and socioeconomic profile includes data on many of the key demographic, social and economic indicators, such as population, income, poverty status, educational attainment, employment, housing and transportation.

The health status of the county provides details on various indicators including: maternal and child health (such as prenatal care, birth rates, infant and fetal mortality, child immunization rates); behavioral health; hospital utilization data; and morbidity and mortality trends of chronic diseases, infectious diseases and leading causes of death.

The health resources availability and access profile section presents information pertaining to the obtainability of health care resources in Palm Beach County and includes information on health insurance coverage, Federally Qualified Health Centers (FQHCs), and medically underserved populations and areas (MUPs/MUAs).

The section titled Community Perspective includes insight gleaned from individuals and organizations in the community.

Below are highlights of each of the four sections.

Demographic and Socioeconomic Profile

- In 2014, there were approximately 34,509 individuals residing in the Glades, representing 2.5% of Palm Beach County's total population.
- Canal Point had the highest median age (39.4), while Belle Glade had the lowest, or youngest, median age among the Glades communities.
- A majority of the individuals residing in the Glades identified as Black or African American and Non-Hispanic or Latino than any other race and ethnicity.

- Of the Glades residents that identified as foreign-born, most were from Latin America, the Caribbean, and Central America.
- In 2014, in the Glades communities, the highest percentage of residents who lived in poverty were female.
- In 2014, rates of unemployment were higher among all zip codes in the Glades when compared to Palm Beach County.

Health Status Profile

- Overall, birth counts have declined steadily from 575 in 2011, to 490 in 2015.
- In 2015, Canal Point had the highest fetal death rate at 142.9 per 1,000 deliveries.
- In 2015, the rate of infant deaths climbed from 7.7 per 1,000 to 12.2 per 1,000 deliveries.
- The most common cause of death in the Glades in 2015 was malignant neoplasm (cancer), responsible for 54 deaths, followed by heart disease, responsible for 49 deaths, and unintentional injury, responsible for 26 deaths.
- Among the Glades communities, homicide counts were the highest in Belle Glade, followed by Pahokee for years 2011-2015.

Health Resources Availability and Access

- Among the twelve medically underserved areas/populations in Palm Beach County, Glades holds the third lowest score.
- In 2014, those who identified as Hispanic or Latino (of any race) were more likely to be uninsured.

Community Perspective

- Four focus groups were conducted in the Glades communities in three languages: English, Haitian-Creole and Spanish.
- Focus group participants discussed several key health issues: : diabetes, mental health, substance abuse, heart disease and hypertension, obesity, cancer, asthma/COPD, oral health, and environmental toxicity.
- HCSEF conducted 21 key informant interviews with a diverse set of community members, including but not limited to healthcare providers, local leaders, business owners, and members of law enforcement.
- Populations with unmet needs mentioned by key informants included: low income, uneducated, minority, immigrant and migrant, formally-incarcerated, uninsured, elderly, and the homeless

METHODOLOGY

In 2016, the Health Care District of Palm Beach County and the Florida Department of Health in Palm Beach County engaged the Health Council of Southeast Florida (HCSEF) to facilitate comprehensive health assessments for both Palm Beach County and, more specifically, the Glades Region. The following report will focus on the information specific to the Glades region in an effort to identify health indicators within the community that present areas of concern, gaps in care or services and opportunities for improvement.

The Glades Region Health Assessment includes information and data on the following areas:

- Demographic characteristics
- Socioeconomic characteristics
- Maternal and child health
- Behavioral risk factors
- Death, illness and injury
- Infectious diseases
- Health resource availability

HCSEF conducted a comprehensive review of secondary data sources to obtain the most reliable and current data for the Community Health Assessment. Secondary data sources include but are not limited to the US Census Bureau – American Community Survey, Florida Department of Health, Florida Department of Education, Florida Department of Law Enforcement, and Agency for Health Care Administration (AHCA). Some sources are rotated and asked in alternate years; therefore, results may be presented in varying years or multi-year counts. In addition, geographic data are presented in the format in which they are available (i.e., zip code and census county division).

The information within this report may be used to identify health needs in the community and guide future health planning initiatives in the Glades Region.

DEMOGRAPHIC AND SOCIOECONOMIC PROFILE

The geographic region commonly referred to as “The Glades” (also referred in this assessment as the “Glades Region”) is in the western part of Palm Beach County and along the southeastern rim of Lake Okeechobee. Four communities make up this vast and mostly agricultural region: South Bay, Belle Glade, Canal Point and Pahokee.

The City of South Bay is settled at the crossroads of East-West State Road 80 and North-South U.S. 27 intersect. The city is a haven for agriculture and recreation, with its rich black soil and vast lake waters. Although the population in Palm Beach County has increased significantly in the last decade, South Bay has remained smaller with an estimated 5,161 residents within its city limits.

Belle Glade is the largest city within the 2,862,000-acre subtropical Everglades in the heart of Florida.¹ The city was incorporated in 1928 with a population of less than 500 at the time. That population has grown to over 21,000. From its incorporation to present day, agriculture has played a significant role in the area’s development.

Canal Point was founded in 1914 and is located on the Southeast shore of Lake Okeechobee in Northwest Unincorporated Palm Beach County. It a census-designated place (CDP) with a population of 337 residents.

The City of Pahokee was founded in the early 1900’s and was named after the Seminole word “Pahokee” meaning “grassy waters.” In 1992, Pahokee was incorporated as a city by the Municipal Government. It is a relatively small city with a total area of 5.4 square miles, with residents referring to it as Palm Beach County’s “Other” coast due to its proximity to Lake Okeechobee.²

The demographic and socioeconomic characteristics of the residents of South Bay, Belle Glade, Canal Point and Pahokee are presented in the following section stratified by each city’s respective zip code. To aid in the identification of barriers and gaps, regional data is presented alongside county data when applicable. The selected indicators provide background context for specific health needs in the community and provide information imperative to the identification of barriers and gaps in the health care system. It is important to note that although the county is not designated rural by federal entities, the Glades region has been denoted as a state-designated priority rural area. South Bay, Belle Glade, and Pahokee are also designated rural areas of critical economic concern by the state.

DEMOGRAPHIC CHARACTERISTICS

POPULATION

TOTAL POPULATION

The total population of Palm Beach County has steadily grown over the past decade. As the population increases, the healthcare system must adapt to the growing demand for services. In 2014, the population in Palm Beach County was 1,359,074. The residents of the Glades Region accounted for 2.6% of the county population.

TABLE 1: TOTAL POPULATION, GLADES REGION AND PALM BEACH COUNTY, 2014

Glades Region (33430, 33438, 33476, 33493)		Palm Beach County
Population	% of Palm Beach County's Population	Population
34,846	2.6%	1,359,074

Source: U.S. Census Bureau, American Community Survey (ACS), 2014

Compiled by: Health Council of Southeast Florida, 2017

In 2014, Belle Glade and Pahokee residents accounted for over three-quarters of the total population in the four defined zip codes. During this time, Belle Glade had a population of 21,286 and Pahokee recorded a population of 8,062.

TABLE 2: TOTAL POPULATION BY ZIP CODE, GLADES REGION, 2014

	Number	Percent
Glades Region (33430, 33438, 33476, 33493)	34,846	34,846
Belle Glade (33430)	21,286	61.1%

Compiled by: Health Council of Southeast Florida, 2017

POPULATION BY AGE

The healthcare needs of a population vary significantly between age groups. Table 3 shows the population by age in the Glades and Palm Beach County in 2014. The median age in Palm Beach County was 43.9 years, which was higher than the median ages in all four communities that compose the Glade Region. The median ages in the Glades ranged from 33.3 in Belle Glade to 39.4 in Canal Point.

TABLE 3: POPULATION BY AGE, GLADES REGION AND PALM BEACH COUNTY, 2014

	Palm Beach County	Belle Glade (33430)		Canal Point (33438)		Pahokee (33476)		South Bay (33493)

POPULATION BY RACE AND ETHNICITY

The diversity in an area is another important consideration for health planning, as health behavior, health care utilization, and subsequently, health outcomes often differ between races and ethnicities. Table 4 and Figures 2 and 3 depict population by race and ethnicity in the Glades Region and in Palm Beach County for the year 2014. During this time, a majority of Belle Glade, Pahokee and South Bay residents identified as Black or African American. All four Glades communities had a higher percentage of residents that identified as Hispanic or Latino (of any race) when compared with the county.

TABLE 4: POPULATION BY RACE AND ETHNICITY, GLADES REGION AND PALM BEACH COUNTY, 2014

PLACE OF BIRTH

Identifying an individual's place of birth can provide an idea of the competencies (ex. language skills, cultural idiosyncrasies, etc.) needed among providers. The table below shows the population by place of birth in the Glades for the year 2014. Belle Glade and Pahokee had the highest number of foreign-born residents (6,378 and 1,471, respectively). A majority of these individuals were born in the Caribbean and Central America.

TABLE 6: POPULATION BY PLACE OF BIRTH, GLADES REGION AND PALM BEACH COUNTY, 2014

LANGUAGES SPOKEN AT HOME

Language is often a barrier to health care access. The table below depicts the language spoken at home by individuals age 5 years and over residing in the Glades communities. In 2014, over one-third of residents living in the Glades region spoke a language other than English. Of those individuals, over half (57.6%) were reported to speak English less than “very well.” Of the residents that reported speaking a language other than English, 76.9% reported speaking Spanish or Spanish Creole at home.

TABLE 8: LANGUAGE SPOKEN AT HOME, GLADES REGION, 2014

	Total	Percent of specified language speakers	
		Speak English "very well"	Speak English less than "very well"
Population 5 years and over	32,325	79.1%	20.9%
Speak only English	63.6%	--	--
Speak a language other than English	36.4%	42.4%	57.6%
Spanish or Spanish Creole	76.9%	45.2%	54.8%
French Creole	20.1%	24.9%	72.2%
Other languages	3.0%	68.6%	31.4%

POPULATION BY CENSUS COUNTY DIVISION

A Census County Division (CCD) is a subdivision of a county that is a relatively permanent statistical area established jointly by the Census Bureau and the state and local government authorities. In Palm Beach County, there are 11 areas designated as CCD's. The table below shows the population for each of the 11 divisions. In 2014, Boynton Beach-Delray Beach CCD was the most populous, accounting for nearly one-quarter of the county's total population. Conversely, the Glades CCD, Western Community CCD and Belle Glade-Pahokee CCD were the least populous, making up less than 5% of the county's total population. Figure 4 provides a visual depiction of the areas included in each CCD.

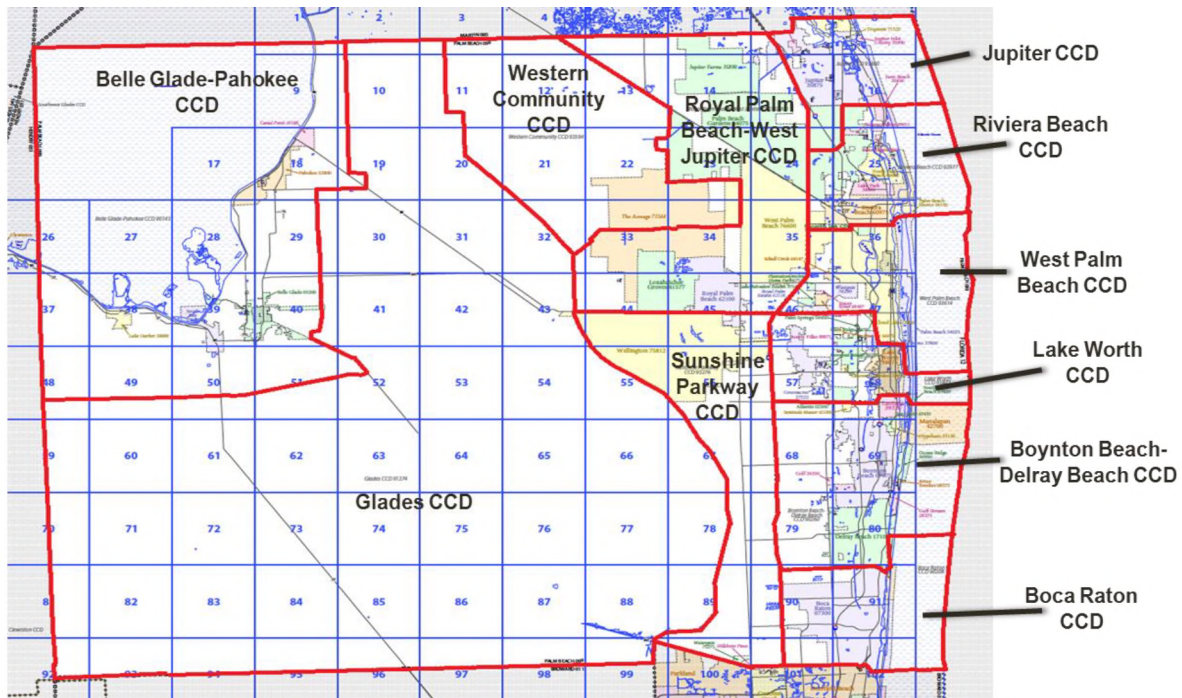

TABLE 10: POPULATION BY CENSUS COUNTY DIVISION, PALM BEACH COUNTY, 2014

	Number	Percent
Total Population	1,359,074	1,359,074
Belle Glade-Pahokee CCD	34,623	2.5%
Boca Raton CCD	130,671	9.6%
Boynton Beach-Delray Beach CCD	316,198	23.3%

According to the World Health Organization (WHO), people with disabilities report seeking more health care and have greater unmet needs than others.³ The following table shows the population with a disability by age and type within the Glades communities in 2014. Glades residents ages 65 years and older has the highest percentage of individuals with disabilities across all communities, with the highest (62.3%) in South Bay and lowest (30.6%) in Belle Glade.

SOCIOECONOMIC CHARACTERISTICS

An individual's socioeconomic status can influence their access to care, as well as their health outcomes. Communities of lower economic status often lack the services and resources necessary for residents to maintain their health. The following section of the report focuses on socioeconomic indicators including measures on poverty, income, education, employment/unemployment status, housing, and crime.

POVERTY

For many individuals, families and communities, poverty can create many difficulties. Poverty often hinders access to many services including medical care and nutrition. The table below shows the poverty status in the past 12 months by age and gender in the Glades communities and Palm Beach County for the year 2014. During this time, the percentage of residents below the poverty level was more than double in the Glades communities than in the county.

TABLE 13: POVERTY STATUS IN THE PAST 12 MONTHS BY AGE AND GENDER, GLADES REGION AND PALM BEACH COUNTY, 2014

	Palm Beach County		Belle Glade (33430)		Canal Point (33438)		Pahokee (33476)		South Bay (33493)

A further breakdown of populations living in poverty can highlight possible disparities among different subgroups and ultimately lead to a well-informed health planning process. The table below shows residents of the Glades and Palm Beach County by race and ethnicity that fell below the poverty line in the past 12 months. In 2014, residents of Belle Glade, Pahokee and South Bay that identified as Black or African American experienced higher rates of poverty than residents that identified as White.

TABLE 14: POVERTY STATUS IN THE PAST 12 MONTHS BY RACE AND ETHNICITY, GLADES REGION AND PALM BEACH COUNTY, 2014

The following table illustrates the poverty status in the past 12 months among families living in the Glades and Palm Beach County during 2014. Within the four communities in the Glades, Canal Point saw the highest percentage of families living below the poverty level (58.3%) with children under 18 years of age. All communities in the Glades region had higher rates of families living below the poverty level when compared to the rate in Palm Beach County during the same time.

TABLE 15: FAMILY POVERTY STATUS IN THE PAST 12 MONTHS, GLADES REGION AND PALM BEACH COUNTY, 2014

INCOME

Income is an important indicator when looking at the health of a community. Income often dictates an individual's access to services and resources including: healthy food, safe housing, health insurance and medical services.

PER CAPITA INCOME

Per capita income is calculated by adding all income in an area and then dividing by the total population. While this provides some insight into the financial situation in an area, it does not provide information pertaining to the distribution of wealth or disparities within an area.

The table below displays the per capita income and earnings for the Glades and for Palm Beach County during 2014. Among the Glades communities, Canal Point had the highest per capita income (\$13, 891) followed by Belle Glade (\$13,641). South Bay had the lowest per capita income (\$6,187). In comparison, Palm Beach County had a per capita income of \$33,072.

TABLE 16: PER CAPITA INCOME AND EARNINGS, GLADES REGION AND PALM BEACH COUNTY, 2014

	Palm Beach County	Belle Glade (33430)	Canal Point (33438)	Pahokee (33476)	South Bay (33493)
Per capita income (dollars)	33,072	13,641	13,891	12,336	6,187

Household income reflects the total amount of income collected by all workers within a single household. A household is classified as all people who occupy a housing unit; the occupants may or may not be related. Shown below is the household income for the Glades Region and Palm Beach County in 2014. All four Glades communities had higher percentages of households with food stamps/SNAP benefits when compared to the county; the highest percentage was in Belle Glade at 34.0%.

TABLE 17: HOUSEHOLD INCOME, GLADES REGION AND PALM BEACH COUNTY, 2014

GINI INDEX

The Gini Index is a measurement of the income distribution of residents living in a defined area. The number varies between 0 and 1 and is based on residents' net income. A value of 0 indicates perfect equality, where there is a proportional distribution of income throughout an area. A value of 1 indicates perfect inequality, where one household possess all the income and others have no income.

The table below depicts the Gini Index in the Glades Region and Palm Beach County in 2014. In 2014, Palm Beach County had a Gini Index of 0.51. Across all communities, the Glades fell lower on the index scale; South Bay being the lowest (0.41).

EDUCATIONAL ATTAINMENT

Educational attainment often influences socioeconomic status. Low socioeconomic status can hinder access to health care services and can result in less desirable health outcomes.

The table below shows the educational attainment by gender in the Glades and in Palm Beach County for the year 2014. During this time, the Glades communities had a higher percentage of individuals 25 years and over with less than 9th grade education than the county.

TABLE 21: EDUCATIONAL ATTAINMENT BY GENDER, GLADES REGION AND PALM BEACH COUNTY, 2014

		Population 25 years and over	Less than 9th grade	9th to 12th grade, no diploma	High school graduate (includes equivalency)	Some college, no degree	Associate's degree	Bachelor's degree	Graduate or professional degree

HIGH SCHOOL GRADUATION RATES

In the following table, the graduation rates among the Glades communities and Palm Beach County for the school years 2011-2012 through 2015-2016 are shown. From 2011 through 2015, the Glades communities consistently had lower graduation rates than Palm Beach County. For the 2015-2016 school year, the graduation rate in the Glades region was 62.5%. During the same time period, Palm Beach County experienced a graduation rate of 82.3%.

TABLE 22: GRADUATION RATES, GLADES REGION AND PALM BEACH COUNTY, 2011-2012 THROUGH 2015-2016

SCHOOL PERFORMANCE

Schools play a critical role in the lives of youth by helping to promote the health and safety and planting the seeds to establish lifelong healthy behaviors.⁴ When assessing the needs of a community, school performance can prove to be a valuable indicator.

The table below shows the school grades by year for the years 2010-2014. In 2014, over one-third (38.5%) of schools in the Glades region received a "D" followed by 30.8% receiving a "C".

TABLE 23: SCHOOL GRADES BY YEAR, GLADES REGION, 2010-2014

BUSINESS AND EMPLOYMENT

UNEMPLOYMENT

High rates of unemployment can affect the financial stability of individuals and the community in which they reside. It can lead to decreased expenditures for services and higher rates of uninsured.

The table below shows the employment status of residents in the Glades and in Palm Beach County in 2014. The rate of unemployment was significantly higher in all Glades communities (the highest in Pahokee at 25.7%) than in Palm Beach County (10.8%).

TABLE 24: EMPLOYMENT STATUS, GLADES REGION AND PALM BEACH COUNTY, 2014

EMPLOYER SIZE AND INDUSTRY

The table below displays the employment by industry in the Glades region for the year 2014. With the exception of Pahokee, the highest percentage of workers were employed in the 'Educational services, and health care and social assistance' industries. During this same time, Pahokee had more residents employed in the 'Agriculture, forestry, fishing and hunting, and mining' industries (21.8%).

TABLE 25: EMPLOYMENT BY INDUSTRY, GLADES REGION, 2014

SNAP

In 1990, the Food Stamp Act was amended to include a provision for an optional nutrition education program to be paired with the distribution of food stamps.⁵ Access to healthy, nutritious foods can lead to better health outcomes among residents. The table below displays SNAP and free lunch participation in Belle Glade in September of 2016. Over a third (34.4%) of the population in Belle Glade were SNAP recipients.

TABLE 29: SNAP AND FREE LUNCH PARTICIPATION, PALM BEACH COUNTY, SEPTEMBER, 2016

HOUSING

The availability of safe, affordable housing contributes greatly to the mental and physical wellbeing of communities.

HOUSING UNITS

The table below shows housing occupancy in the Glades in 2014. The vacancy rates in the Glades communities ranged during this time from 10.4% in Pahokee to 43.6% in Canal Point.

TABLE 30: HOUSING OCCUPANCY, GLADES REGION, 2014

	Belle Glade (33430)		Canal Point (33438)		Pahokee (33476)		South Bay (33493)

The table below shows the percentage of householders living alone in the Glades communities. Overall, Belle Glade had the highest percentage of householders living alone (25.3%). Among those 65 and over living alone, Canal Point had the highest percentage (21.8%), while South Bay had the lowest (7.1%).

TABLE 31: HOUSEHOLDER LIVING ALONE, GLADES REGION, 2014

MEDIAN HOUSING PRICE

Shown below is the housing value of owner-occupied units in the Glades in 2014. During this time, the median dollar amounts varied throughout the communities, with the highest in South Bay (\$94,600) and the lowest in Canal Point (\$85,000). Across all communities, a majority of owner-occupied units had a housing value of \$50,000 to \$99,999.

TABLE 32: HOUSING VALUE, OWNER-OCCUPIED UNITS, GLADES REGION, 2014

TRANSPORTATION

Lack of transportation often hinders individuals from accessing necessary services.

NUMBER OF VEHICLES AVAILABLE

Lack of transportation makes it harder for residents to access health services and resources. Access transportation is important in all communities, but it is especially important in rural communities. During the health planning process, it is important to consider the location and availability of service providers to ensure that residents, regardless of their transportation needs, can access needed services. The table below shows the vehicles available by household in the Glades in 2014. There were higher percentages of households with at least one vehicle available. During this time, Belle Glade had the highest percentage of households with no vehicle available (20.2%).

TABLE 34: VEHICLES AVAILABLE BY HOUSEHOLD, GLADES REGION AND PALM BEACH COUNTY, 2014

	Palm Beach County		Belle Glade (33430)		Canal Point (33438)		Pahokee (33476)		South Bay (33493)

CRIME

Crime in a community may influence health status in numerous ways. The table below shows total arrests in the Glades Region and Palm Beach County for the year 2015. In Palm Beach County, the arrest rate per 100,000 was 3,526.5. Among the local community police departments, the arrest rate per 100,000 was the lowest in South Bay (1,184.2 per 100,000) and the highest in Belle Glade (2,762.5 per 100,000.)

TABLE 35: TOTAL ARRESTS, GLADES REGION, 2015

Agency/County	Population	Total Arrests	Arrest Rate per 100,000	Total Adult Arrests	Total Juvenile Arrests
Palm Beach County	1,378,417	48,610	3526.5	44,539	4,071
Palm Beach County Sheriff's Office	612,469	21,598	3526.4	19,803	1,795
Belle Glade Police Department	17,448	482	2762.5	441	41

HEALTH STATUS PROFILE

The following section provides data on the health status in the Glades region for various health indicator categories including: Maternal and Child Health, Behavioral Health, Morbidity and Mortality. It is important to note and take caution while interpreting the data, that in smaller communities, rates and counts become unstable due to the small number of events.

MATERNAL AND CHILD HEALTH

PRENATAL CARE

Early prenatal care is associated with positive pregnancy outcomes. The table below shows the births to mothers with first trimester prenatal care in the Glades communities for the years 2011-2015. Trimester prenatal care is calculated as the time elapsed from the date of the last menstrual period to the date of the first prenatal care visit.

TABLE 38: BIRTHS TO MOTHERS WITH 1ST TRIMESTER PRENATAL CARE, GLADES REGION, 2011-2015

	Belle Glade (33430)	Canal Point (33438)	Pahokee (33476)	South Bay (33493)

KOTELCHUCK INDEX

The Kotelchuck Index, also called the Adequacy of Prenatal Care Utilization (APNCU), uses initiation of prenatal care and number of prenatal visits for calculating adequate prenatal care. The table below shows births by the Kotelchuck index and by the mother's education level for the year 2015.

TABLE 41: BIRTHS BY KOTELCHUCK PRENATAL CARE INDEX BY MOTHER'S EDUCATION, GLADES REGION, 2015

OVERWEIGHT AND OBESITY

Being overweight or obese while pregnant can place a mother and her baby at risk for multiple adverse health outcomes. Rural communities experience higher rates of obesity and overweight than the nation as a whole, yet they often lack the resources to address these concerns.⁷ Weight that is higher than what is considered a healthy weight for a given height is described as overweight or obese. A screening tool called the Body Mass Index (BMI) is used to indicate the severity of overweight and obesity. A BMI between 25.0 to <30 falls within the overweight range while a BMI 30.0 or higher is considered obese.⁸

The table below shows the births to overweight and obese mothers at the time pregnancy occurred.

TABLE 42: BIRTHS TO OVERWEIGHT MOTHERS AT THE TIME PREGNANCY OCCURRED, GLADES REGION, 2011-2015

	Belle Glade (33430)	Canal Point (33438)	Pahokee (33476)	South Bay (33493)

WIC

The Special Supplemental Nutrition Program for Women, Infants, and Children (WIC) provides federal grants to States for supplemental foods, health care referrals, and nutrition education for low-income pregnant, breastfeeding, and non-breastfeeding postpartum women, and to infants and children up to age five who are found to be at nutritional risk.⁹

The table below shows the number and rate of births by mothers participating in WIC from 2011 to 2015.

TABLE 44: BIRTHS BY MOTHERS PARTICIPATING IN WIC, 2011-2015

BIRTH RATES

Birth rates are an indication of the increase, plateau, or decrease of population among communities.

TOTAL BIRTHS

During the health planning process, a community can better adapt to the services needed by a growing, younger sector of the population. The table below shows the birth counts and rates in the Glades region from 2011 to 2015.

TABLE 45: TOTAL RESIDENT LIVE BIRTHS, GLADES REGION, 2011-2015

BIRTH WEIGHT

Engaging in proper prenatal care and healthy behaviors can reduce the likelihood of a low birth weight baby. A low birth weight baby can be born too small, prematurely, or both. This can be due to a variety of factors such as health problems with the mother, genetic factors, problems with the placenta and substance abuse by the mother.¹⁰

VERY LOW BIRTH WEIGHT

Having a low (<2500 grams) or very low (<1500 grams) birth weight can cause serious health problems for some babies. Very low birth weight babies can develop certain health conditions later in life, including diabetes, heart disease, high blood pressure, metabolic syndrome, and obesity.

The table below depicts the count and rate of live births under 1500 grams (considered very low birth weight) among the Glades communities.

TABLE 47: LIVE BIRTHS UNDER 1500 GRAMS (VERY LOW BIRTH WEIGHT), GLADES REGION, 2011-2015

INFANT MORTALITY

Fetal and infant mortality are critical components in determining the overall health status of a community.

FETAL DEATHS

Fetal death refers to the death of a fetus prior to the complete expulsion or extraction from its mother if the 20th week of gestation has been reached; the death is indicated by the fact that after such expulsion or extraction the fetus does not breathe or show any other evidence of life such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles.¹²

The table below shows the fetal death rate per 1,000 deliveries in the Glades from 2011-2015. It is important to use caution when interpreting rates that are derived from a smaller number of events.

TABLE 50: RESIDENT FETAL DEATH RATE PER 1,000 DELIVERIES, GLADES REGION, 2011-2015

	2011	2012	2013	2014	2015
33430 – Belle Glade	11.0	8.5	5.7	21.0	9.5
33438 – Canal Point	0	0	0	100.0	142.9
33476 – Pahokee	0	0	0	7.9	0
Total	6.9	5.3	3.7	17.0	8.1

Source: FloridaCHARTS, Florida Department of Health, Bureau of Vital Statistics, 2015

Notes: Use caution when interpreting rates based on small numbers of events.

Rates are considered unstable if they are based on fewer than 5 events or if the denominator (population at risk) is fewer than 20.

Compiled by: Health Council of Southeast Florida, 2017

INFANT DEATHS

Infant mortality is defined as the death of a child before his or her first birthday. The table below shows the infant death rate per 1,000 deliveries in the Glades region from 2011-2015. Again, it is important to recognize that the rate was based on a relatively small number of events.

TABLE 51: RESIDENT INFANT DEATH RATE PER 1,000 DELIVERIES, GLADES REGION, 2011-2015

	2011	2012	2013	2014	2015
33430 – Belle Glade	11.2	2.8	2.8	6.1	16
33438 – Canal Point	0	0	0	0	0
33476 – Pahokee	13.3	19.7	7.9	16	8.3
33493 – South Bay	0	61.2	23.8	0	0
Total	10.4	12.5	5.6	7.7	12.2

Source: FloridaCHARTS, Florida Department of Health, Bureau of Vital Statistics, 2015

Notes: Use caution when interpreting rates based on small numbers of events.

Rates are considered unstable if they are based on fewer than 5 events or if the denominator (population at risk) is fewer than 20.

BREASTFEEDING

Research has shown breastfeeding as critical to improved health outcomes for both mother and baby. Breastfeeding provides all the vitamins and nutrients the baby needs in the first six months of life, providing antibodies that help fight off viruses and bacteria and lowering the baby's risk of developing allergies.

The table below shows the number of mothers who initiated breastfeeding among the Glades region between 2011-2015.

TABLE 52: MOTHERS WHO INITIATED BREASTFEEDING, GLADES REGION, 2011-2015

MORTALITY

Mortality is a term used when referring to death. The following section will highlight some key health issues affecting the Glades communities.

LEADING CAUSES OF DEATH

The table below shows the leading causes of death in the Glades Region in 2015. The most common cause of death was cancer, responsible for 54 deaths in 2015, followed by heart disease (49) and unintentional injury (26).

TABLE 53: LEADING CAUSES OF DEATH, GLADES REGION, 2015

	Belle Glade (33430)	Canal Point (33438)	Pahokee (33476)	South Bay (33493)	Total
Malignant Neoplasm (Cancer)	35	0	12	7	54
Heart Diseases	24	3	13	9	49
Unintentional Injury	13	0	11	2	26
Cerebrovascular Diseases (I60-I69)	14	1	7	1	23
Diabetes Mellitus (E10-E14)	9	0	6	1	16

FEDERAL HEALTH PROFESSIONAL SHORTAGE AREA (HPSA)

Health Professional Shortage Area (HPSAs) are populations, areas or institutions that were designated by the Health Resources and Services Administration (HRSA) to have shortages of primary health care, dental or mental providers. To be designated as HPSA, several criteria are referenced including: a rational need for services, a provider population ratio that falls below a set standard, and an occurrence of current health providers being over-utilized or inaccessible.

HPSA scores range from 1 to 25 for primary care and mental health, 1 to 26 for dental health, with higher scores indicating greater need. All Federally Qualified Health Centers and Rural Health Clinics that provide health services regardless of the ability to pay receive automatic facility HPSA designation.

When looking at the tables, HPSA FTE refers to the number of practitioners providing ambulatory patient care in the HPSA expressed as full-time equivalents.

PRIMARY CARE HEALTH PROFESSIONAL SHORTAGE AREA

The following table depicts the primary care health professional shortage areas in Palm Beach County as of December, 2016. HPSA are scored on a scale of 0-25 with higher scores indicating greater need. The Low-Income/Migrant Farmworker – Belle Glade/Pahokee/Palm Beach presented a HPSA Score of 9. The South Bay Correctional Facility also presented a HPSA score of 9.

TABLE 65: PRIMARY CARE HEALTH PROFESSIONAL SHORTAGE AREAS, PALM BEACH COUNTY, AS OF DECEMBER 2016

HPSA Name	Designation Type	HPSA FTE	HPSA Score
Low Income - Delray Beach	HPSA Population	5.0	8
Low Income - Lantana/Lake Worth	HPSA Population	8.0	10
Low Income - Boynton Beach	HPSA Population	1.0	16
Low Income - West Palm Beach	HPSA Population	24.0	11

FEDERAL MEDICALLY UNDERSERVED AREAS/POPULATIONS

Medically Underserved Areas/Populations (MUAs/MUPs) are designated by Health Resources Service Administration (HRSA) using the following indicators: provider per 1,000 population ratio, percent of population at 100% of the Federal Poverty Level (FPL), percent of the population 65 and over, and infant mortality rate.

Eligibility of for MUA/P designation depends on the Index of Medical Underservice (IMU) calculated for the area or population proposed for designation. Under the established criteria, an area or population with an IMU of 62.0 or below qualifies for designation. The IMU scale is from 0 to 100, where 0 represents completely underserved and 100 represents best served or least underserved. The IMU is calculated by assigning values to the four demographic and health indicators previously mentions, then adding the weighted values together. The figure below depicts the IMU scoring process.

FIGURE 5: INDEX OF MEDICAL UNDERSERVICE

MUPs are comprised of groups of individuals who face economic, cultural or linguistic barriers to accessing health care. MUAs are a county or a group of urban census tracts in which residents have a shortage of personal health services.¹⁴

The table below shows the Medically Underserved Areas/Populations (MUA/Ps) in Palm Beach County designated as of December, 2016. There are a total of eight designated MUA/Ps in the county. The Low Inc/ M F W - Belle Glade/ Pahokee area holds the third lowest score at 53.60.

TABLE 68: MEDICALLY UNDERSERVED POPULATIONS AND AREAS, PALM BEACH COUNTY, AS OF DECEMBER, 2016

Name	Identification Number	Index of Medical Underservice Score	MUA/P Designation Date
Low Inc - Boynton Beach	00570	56.20	9/4/2002
Low Inc - West Palm Beach	07064	59.90	6/22/2001
Low Inc - Greenacres	07245	47.50	7/25/2002

HEALTH INSURANCE

Stable health insurance coverage helps individuals get into the health care system. Uninsured people are: less likely to receive medical care, more likely to die early and more likely to have poor health status.¹⁵ Lack of adequate coverage makes it difficult for people to get the health care they need and, when they do receive care, burdens them with medical bills. Access to comprehensive, quality care services is imperative for the achievement of health equity and for increasing the quality of a healthy life for everyone.

The table below shows health insurance coverage for individuals with disabilities in the Glades in 2014. A significant number of individuals with a disability have some type of health insurance among all communities and ages groups. It should be noted that the largest percentage of individuals with disabilities with no insurance were among the 18-64 age group in Belle Glade (23.4%).

TABLE 69: HEALTH INSURANCE COVERAGE FOR INDIVIDUALS WITH DISABILITIES BY AGE, GLADES REGION, 2014

FEDERALLY QUALIFIED HEALTH CENTERS (FQHC)

Federally Qualified Health Centers (FQHCs) include all organizations receiving grants under Section 330 of the Public Health Service Act (PHS). FQHCs qualify for enhanced reimbursement from Medicare and Medicaid, as well as other benefits. FQHC must serve an underserved area or population, offer a sliding fee scale, provide comprehensive services, have an ongoing quality assurance program, and have a governing board of directors.¹⁶

The figure below provides a visual depiction of the distribution of Federally Qualified Health Centers in Palm Beach County as of December 2016. The Glades Region is home to three of those centers.

COMMUNITY PERSPECTIVE

COMMUNITY FOCUS GROUPS

The Health Council of Southeast Florida conducted focus groups in the Glades Region from October 2016 through November 2016 to obtain insight and knowledge from the residents of this area. The goal of each focus group discussion was to understand the experiences and unique needs of the community and its residents with an emphasis on health issues and health services. The following section outlines the focus group methodology and provides a summary of the common themes identified throughout the discussions.

METHODOLOGY

The Health Council of Southeast Florida (HCSEF) has developed and fine-tuned protocols and questions for community focus groups. Local community organizations aided in the recruitment of participants and provided a location for the discussion. The following segments of the population were recruited: individuals residing in the Glades communities, individuals over 65 years of age, youth, homeless, low-income populations, individuals with primary languages other than English (Haitian Creole and Spanish) and individuals with disabilities.

Prior to starting each focus group, participants were given a demographic questionnaire to complete. Assistance was provided to individuals requiring it. To incentivize the process, HCSEF provided refreshments and gift cards to all individuals that participated.

Three of the four focus groups held in the Glades Region has 15 participants. One focus group had 11 participants. The groups had concrete questions and probes to utilize if they were needed to further the discussion and lasted approximately 60 to 90 minutes. The participants were assured that no names would be included in the summarization of answers. Only common themes expressed by participants from across different focus groups were included in this report. Thus, not everything said in the groups were included in the summary.

The following tables depict the information collected from the demographic questionnaires.

TABLE 72: SITE, DATE, TIME AND NUMBER OF PARTICIPANTS IN FOCUS GROUPS

Site	Date	Time	# of Participants
Glades Initiative	10/31/2016	10:00AM	15
Glades Initiative	11/2/2016	10:00AM	15
Farmworker Coordinating Council	11/7/2016	10:00AM	15
Bridges at Pahokee	11/15/2016	5:30PM	11

TABLE 73: FOCUS GROUPS ZIP CODES

Zip Code	City	# of Participants	% of Participants
33430	Belle Glade	30	75.0%
33438	Canal Point	0	0.0%
33476	Pahokee	9	22.5%
33493	South Bay	1	2.5%

TABLE 74: FOCUS GROUPS GENDER

Gender	# of Participants	% of Participants
Female	50	89.3%
Male	5	8.9%
No Response	1	1.8%

TABLE 75: FOCUS GROUPS AGE

Age Group	# of Participants	% of Participants
0-18 years	2	3.6%
19-24 years	6	10.7%
25-44 years	22	39.3%
45-64 years	19	33.9%
65-84 years	6	10.7%
85+ years	0	0.0%
No Response	1	1.8%

TABLE 76: FOCUS GROUPS RACE

Race	# of Participants	% of Participants
Asian	0	0.0%
Black or African American	34	60.7%
Native Hawaiian or Other Pacific Islander	1	1.8%
American Indian, Alaskan Native, or Indigenous	1	1.8%
White/Caucasian	17	30.4%
No Response	3	5.4%

TABLE 77: FOCUS GROUPS ETHNICITY

Ethnicity	# of Participants	% of Participants
Hispanic or Latino	19	33.9%
Non-Hispanic or Non-Latino	30	53.6%
No Response	7	12.5%

TABLE 78: FOCUS GROUPS EDUCATIONAL ATTAINMENT

Educational Attainment	# of Participants	% of Participants
6th Grade or <	15	26.8%
Some Middle School or Some High School, no Diploma (Grades 7-11)	13	23.2%
High School graduate or GED (grade 12)	15	26.8%
Some College, No Degree	4	7.1%
Associate's Degree/Certificate from Vocational, Business or Trade School	3	5.4%
4 yrs of college or higher, with Bachelor's degree or higher	3	5.4%
Other:	2	3.6%
No Response	1	1.8%

TABLE 79: FOCUS GROUPS EMPLOYMENT

Employment	# of Participants	% of Participants
35 or more hrs per week	15	26.8%
< 35 hours per week	13	23.2%
Unemployed	15	26.8%
Other: Retired/Disabled/Maternity Leave	4	7.1%
No Response	3	5.4%

TABLE 80: FOCUS GROUPS ANNUAL INCOME

Annual Income	# of Participants	% of Participants
\$0 - \$20,000	24	42.9%
\$20,001 - \$40,000	5	8.9%
\$40,001 - \$60,000	1	1.8%
\$60,001 - \$80,000	1	1.8%
\$80,001 - \$100,00	0	0.0%
\$100,001 or more	0	0.0%
No Response	11	19.6%
Prefer Not to Answer	14	25.0%

TABLE 81: FOCUS GROUPS INSURANCE COVERAGE

Insurance Coverage	# of Participants	% of Participants
Yes (Medicaid, Medicare, Private Insurance)	28	62.2%
No	10	22.2%
Don't Know/Not Sure	0	0.0%
Prefer Not to Answer	2	4.4%
No Response	5	11.1%

RESULTS

Four focus groups were conducted with a total of 56 participants in three languages: English, Haitian-Creole, and Spanish. Twelve questions were asked to focus group participants beginning with questions related to overall quality of life then transitioned to access and barriers to health care and general conversation about the healthcare system in the Glades Communities. In addition, probes were utilized by facilitators to clarify responses and glean additional information when needed. The following information are the common themes that emerged during the focus groups with relation to the community, health services and the health care system in the Glades region. Themes are not listed in any order of significance.

Quality of Life

- General sentiment is that the area is not safe
 - Theft, home invasions, gun violence, and murder are concerns
- Workplace safety is a concern for field workers
- Concerns of racial discrimination against Latino communities
- Concerns of drug use among youth, and that it is not a safe area to raise children due to violence
- Senior services available, but are difficult to qualify for (mention of church services being more accessible)

Key Health Issues

- Diabetes
- Mental health
 - Stress, anxiety, trauma and depression
- Substance abuse
 - Drugs and alcohol
- Heart disease and hypertension
- Obesity
- Cancer
- Asthma/COPD
- Oral health
- Environmental toxicity (mentioned among field workers)

Causes of Health Issues

- Lack of health insurance
- Lack of knowledge and education regarding the existing community services and programs
- Lack of health education
 - Exercise
 - Healthy cooking and nutrition
 - Understanding health coverage and navigating the health care system
- Lack of access to affordable health services
 - Mental health and oral health services
- Lack of green space/parks to exercise safely

Barriers to Care

- Lack of continuation of care and communication among health care providers
- Shortage of providers accepting specific insurance coverages, especially specialists
- Shortage of all specialty doctors
- Long wait times, especially for mental health
- Lack of medical facilities/clinics
- Lack of affordable transportation
- Lack of Affordability
 - Health insurance
 - Healthy, nutritious food
- Language barriers and lack of interpreters in health settings
- Cultural norms
 - Fear, lifestyle and dietary habits
- Unemployment

Community Strengths/Assets

- Department of Health clinics
- Safety Nets
 - Health Care District
 - Hospital
 - Federally Qualified Health Centers
- Local churches
- Senior Center
- Community health fairs, mobile immunizations

Health Services Needed

- Specialists
 - Mental health and oral health providers
- Broader safety net coverage
- Education
 - Healthy cooking, nutrition
 - Healthy lifestyles
 - Navigators to help understand the health care system and insurance options
- Affordable health care coverage
- Interpreters available at physician offices, clinics, hospitals, pharmacies

Opportunities to Note

- Career services
- Increase marketing and outreach of existing services currently available
- Community policing
- Increase health education opportunities

- Preventative care
- Increase access to physicians, dentists, and mental health providers
 - Qualified specialists
 - Extended health service hours
 - Shortage in rural areas
- Free or low-cost health coverage
 - Increase awareness and assistance applying for benefits

KEY INFORMANT INTERVIEWS

The Health Council of Southeast Florida conducted 21 interviews with key community stakeholders and members in 2016. The purpose was to collect first-hand information from a wide range of community leaders who have expertise about the county, its residents and its resources. The individuals selected for the interviews included leaders, representatives, or members of medically underserved, low-income and minority populations, as well as funders, members of law enforcement, and leaders of community organizations. Their expert knowledge and understanding provides insight on the nature of problems and give recommendations for solutions and future planning.

METHODOLOGY

The Health Council of Southeast Florida (HCSEF) developed protocols, scripts and questions for key informant interviews. Interview appointments were scheduled and each interview was conducted by a trained facilitator via telephone. The interviews lasted on average 30-45 minutes. Prior to beginning the interview, the facilitator provided an overview of the process and assured the confidentiality of all comments, names and other identifying information during reporting.

RESULTS

Twenty-one key informant interviews were conducted throughout 2016. A total of ten questions were asked and probes were used to clarify information and glean additional insight. The following information are the common themes that emerged during the key informant interviews regarding the Glades region and from stakeholders living in, serving, and representing the Glades communities.

Key Health Issues

- Mental health
 - *"A number of people have mental illness but lack the resources for help...most end up in jail and get services there instead of getting treatment first."*
- High Stress
- Obesity
- Heart disease and hypertension
- Diabetes
- Substance abuse
 - Drug and alcohol abuse

Populations with Unmet Needs

- Lower socioeconomic residents
- Uneducated
- Minority populations
- Immigrant and migrant families
- Formally-incarcerated residents
- Uninsured, underinsured
- Elderly

Community Strengths/Assets

- Hospitals
- Florida Community Health Centers, Inc.
- PATCH annual health fairs
- Churches – provide access point to services (gym, food, etc.)
- Transportation options for seniors (bus, VA, transportation services)

Challenges and Barriers in Maintaining Health

- Lack of specialists in area local to Glades communities (<30 miles)
- Extreme wait times for providers
- Lack of awareness of resources
- Lack of health insurance and affordability
 - *“People have to choose between having food on the table or their medication.”*
- Lack of transportation, and availability of health services in town
- Limited access to healthy, affordable, nutritious food
- Cultural norms
 - *“...don’t know what’s healthy or don’t want to change.”*
- Language barriers
 - Large illiterate population
- Limited recreational, entertainment, and community engagement activities for all ages

Opportunities to Note

- Education
 - Resources available and navigating the system
 - Preventative care
 - Healthy lifestyle (cooking)
- Increase collaboration and coordination among all service providers
- Social work

Suggestions

- Develop farmer’s markets, incentivize community programs and initiatives
- Improve cultural sensitivity of health providers
- Secure committed medical professionals to serve the area
- Measure the effectiveness of programs currently available to residents of the Glades
- Improve education and availability of preventative care
- Tailoring strategies for the diverse target populations residing in the Glades
 - *“know the makeup of your area you are serving and accommodate the practice to fit the needs of the community.”*
 - Build trust between healthcare providers and residents (community liasons)
- Community engagement is key, *“something to motivate the community to participate.”*

CONCLUSION

This report was a collaborative effort by community members and stakeholders with the goal of providing residents access to quality health and human services. This community health needs assessment will provide a better understanding of the health needs in the Glades Region and will help guide future planning efforts to improve the overall health and quality of life for *all* residents in Palm Beach County. The data collected and presented in this assessment will be a valuable tool for the residents and stakeholders of the Glades region moving forward to create positive change and health outcomes among the varied populations.
