	<p><u>June 29, 2022 (HCD Board Room)</u> 12:45 p.m. Board of Directors</p> <p><u>July 27, 2022 (HCD Board Room)</u> 12:45 p.m. Board of Directors</p> <p><u>August 24, 2022 (HCD Board Room)</u> 12:45 p.m. Board of Directors</p> <p><u>September 28, 2022 (HCD Board Room)</u> 12:45 p.m. Board of Directors</p> <p><u>October 26, 2022 (HCD Board Room)</u> 12:45 p.m. Board of Directors</p> <p><u>November 29, 2022 (HCD Board Room)</u> 12:45 p.m. Board of Directors</p> <p><u>December 14, 2022 (HCD Board Room)</u> 12:45 p.m. Board of Directors</p>	
<p>7A-4. Staff Recommends a MOTION TO APPROVE: Board Member Transition- Marjorie Etienne</p>	<p>Marjorie Etienne has transitioned off the C.L. Brumback Primary Care Clinics Board since she has had three unexcused absences.</p> <p>Marjorie Etienne has been transitioned off the C.L. Brumback Primary Care Clinics Board due to non-attendance.</p> <p>Consistent with the District Clinics Holdings, Inc. Bylaws, Section 9.3:</p> <p>9.3 Membership on the Board may be terminated by resignation of a member or by resolution of the Board after any member has three (3) unexcused absences.</p>	<p>VOTE TAKEN: As presented, Ms. Tammy Jackson-Moore made a motion to approve the Board meeting minutes of November 30, 2021. Mr. Gibbons duly seconded the motion. A vote was called, and the motion passed unanimously.</p>
7B. FINANCE		

<p>7B-1. Staff Recommends a MOTION TO APPROVE: District Clinic Holdings, Inc. Financial Report September 2021</p>	<p>The unaudited September 2021 financial statements for the District Clinic Holdings, Inc. are presented for Board review. Management has provided the unaudited income statements and key statistical information for District Clinic Holdings, Inc. Additional Management discussion and analysis are incorporated into the financial statement presentation.</p> <p>The unaudited September statements represent the financial performance through the twelfth month of the 2021 fiscal year for the C.L. Brumback Primary Care Clinics. Gross patient revenue YTD was favorable to budget by \$7.3M due to higher patient volumes than initially anticipated. Net patient revenue YTD was favorable to budget by \$2.2M. Total YTD revenue was favorable to budget by \$2.0M. Increased patient traffic is contributing to this favorable variance. Operational expenses before depreciation were favorable to budget by \$791k due mostly to positive variances in medical supplies \$686k, medical services \$259k, and lease and rental of \$408k. Total YTD net margin was (\$13.1M) compared to budget of (\$16.1M) resulting in a favorable variance of \$3.0M or (18.4%).</p> <p>The Medical clinics YTD gross patient revenue exceeded budget by \$5.1M. Net patient revenue YTD for the Medical clinics was favorable to budget by \$1.8M. The Medical clinics total YTD revenue was favorable to budget by \$1.1M. This favorable variance resulted from increased patient visits. Total operating expenses of \$24.2M were favorable to budget of \$25.0M by \$730k. The positive variance of \$730k is primarily due to the purchase timing of medical supplies, including COVID-19 test kits. Total YTD net margin was (\$11.8M) compared to budget of (\$13.8M) resulting in a favorable variance of \$2.0M or (14.7%).</p> <p>The Dental clinics total YTD gross patient revenue was favorable to budget by \$2.2M. Net patient revenue YTD for the Dental clinics was favorable to budget by \$398k. Total operating expenses of \$4.1M were favorable to budget by \$60k. Total YTD net margin was (\$1.4M) compared to a budget loss of (\$2.3M) for a favorable variance of \$945k or (40.9%).</p> <p>On the Comparative Statement of Net Position, due from other governments increased from \$1.6M to \$3.7M. This balance is due mainly from Health Resources and Service Administration (HRSA) and American Rescue Plan. The District subsidy YTD for the Medical and Dental clinics is \$9.0M and \$961k, respectively, for a combined subsidy of \$10.0M.</p>	<p>VOTE TAKEN: As presented, Ms. Tammy Jackson-Moore made a motion to approve the District Clinic Holdings, Inc. Financial Report September 2021. Mr. Gibbons duly seconded the motion. A vote was called, and the motion passed unanimously.</p>

7C. POLICIES

7C-1.
Staff Recommends a
MOTION TO
APPROVE:
Revised Tracking
Policies

This agenda item presents updates to the Referral Tracking Policy and Diagnostic Test Tracking Policy.

The HRSA Compliance Manual and for Federal Tort Claims Act (FTCA) Manual regarding Coverage for Health Centers and Their Covered Individuals” outlined updates needed to the risk management procedures that address mitigating risk in referral tracking and diagnostics test tracking. Accordingly, the Clinics have updated their policies to align with HRSA requirements.

Mr. Smith requested that this agenda item be moved to the regular agenda.

The request was approved, and agenda item 7C-1: Revised Tracking Policies was moved to the regular agenda.

Mr. Smith asked how referral sources are chosen; how do we determine who to refer that patient out to in the community.

Dr. Andric stated that HRSA requires that any source we refer to have some MOU agreement with the clinics. They request that the referred provider bill the uninsured patient using a sliding fee scale. If the patient is insured, we will send them a list of physicians covered under their plan.

Ms. Abbott also stated that we have over 230 master participation agreements with specialty providers in Palm Beach County that accept District Care patients. We offer them a fair market value of 80-100 of the Medicare allowed amount.

Mr. Smith asked if the clinics make the arrangement for the referral and appointment

Ms. Abbott stated that the District has a call center referral team dedicated to helping assist patients locate a provider and help schedule appointments.

Mr. Gibbons asked if HRSA dictates how we refer patients out.

VOTE TAKEN: As presented, Mr. Gibbons made a motion to approve the Revised Tracking Policies that was moved to the Regular Agenda as requested by Mr. Smith. Ms. Jackson-Moore duly seconded the motion. A vote was called, and the motion passed unanimously.

	Dr. Andric stated that we have to prove to HRSA that we are vigilant and urge to help the patients find specialty providers to assist the patient.	
8. REGULAR AGENDA		
8A. ADMINISTRATION		
8A-1. Staff Recommends a MOTION TO APPROVE: Bylaws Change	<p>This agenda item presents the second review of these Bylaw Changes to the District Clinic Holdings, Inc. Board. This update presents two changes. The first update changes the membership term from three (3) to four (4) years and the term period from January through December three (3) years later to the date of appointment until 4 years later. The second update changes the requirement for the Finance Committee meeting from monthly to quarterly.</p> <p>The first update recommended includes a change to the Bylaws Section 9.1 Term of Membership. The update includes the following changes:</p> <p>The membership term will change from three (3) to four (4) years. This change will align the Clinic Board Membership Terms to the same number of years as the District Board, Lakeside Health Advisory Board, and District Committees.</p> <p>The period of time for membership terms will change from January through December, 3 years later to a simple 4 year term from the date of appointment. This change should reduce the number of Board members whose terms expire at the same time.</p> <p>The language-related to unexpired terms will be removed from 9.2(a) since according to this update all appointments will be for a 4 year period.</p>	VOTE TAKEN: Ms. Jackson-Moore made a motion to approve the Bylaws Change. Mr. Mullen duly seconded the motion. A vote was called, and the motion passed unanimously.
8B. EXECUTIVE		
8B-1. Receive and File: Executive Director Information Update	<p>Updates on key changes within C. L. Brumback Primary Care Clinics:</p> <ul style="list-style-type: none"> • Opening of St. Ann clinic <p>The new St. Ann clinic opened this month on December 2, 2021. Patients have been seen for adult primary care visits as well as being connected to brick and mortar clinics for other services, including behavioral health.</p> <p>Ms. Jackson-Moore asked how many days are we at St. Ann clinic.</p>	Receive & File. No further action necessary.

	Dr. Fritsch stated we have staff there 5 days a week.											
8C. CREDENTIALING												
8C-1. Staff Recommends a MOTION TO APPROVE Licensed Independent Practitioner Credentialing and Privileging	<p>The agenda item represents the licensed independent practitioners recommended for credentialing and privileging by the FQHC Medical Director.</p> <p>The LIPs listed below satisfactorily completed the credentialing and privileges process and met the standards set forth within the approved Credentialing and Privileging Policy. The credentialing and privileging process ensures that all health center practitioners meet specific criteria and standards of professional qualifications. This criterion includes, but is not limited to:</p> <ul style="list-style-type: none">• Current licensure, registration or certification• Relevant education, training and experience• Current clinical competence• Health fitness, or ability to perform the requested privileges• Malpractice history (NPDB query)• Immunization and PPD status; and• Life support training (BLS) <table><tr><th>Last Name</th><th>First Name</th><th>Degree</th><th>Specialty</th><th>Credentialing</th></tr><tr><td>Beauge</td><td>Estelle</td><td>PA</td><td>Physician Assistant</td><td>Initial Credentialing</td></tr></table> <p>Primary source and secondary source verifications were performed for credentialing and privileging elements in accordance with state, federal and HRSA requirements. A Nationally accredited Credentials Verification Organization (CVO) was utilized to verify the elements requiring primary source verification.</p> <p>The C.L. Brumback Primary Care Clinics utilized internal Credentialing staff and the FQHC Medical Director to support the credentialing and privileging process.</p> <p>Estelle Beauge, PA, joined the Mobile Clinic in 2021 as a Physician Assistant. She attended the State University of New York Health Sciences Center at Brooklyn and is certified as a Physician Assistant by the National Commission</p>	Last Name	First Name	Degree	Specialty	Credentialing	Beauge	Estelle	PA	Physician Assistant	Initial Credentialing	<p>VOTE TAKEN: Ms. Tammy Jackson-Moore made a motion to approve the Initial Credentialing and privileges of Estelle Beauge as presented. The motion was duly seconded by Mr. Mullen. A vote was called, and the motion passed unanimously.</p>
Last Name	First Name	Degree	Specialty	Credentialing								
Beauge	Estelle	PA	Physician Assistant	Initial Credentialing								

	on Certification of Physician Assistants. Ms. Beauge has been in practice for five years.	
8D. OPERATIONS		
8D-1. Staff Recommends a MOTION TO APPROVE Operations Reports	<p>This agenda item provides the following operations reports for October 2021:</p> <p>Clinic Productivity, including in-person and telehealth metrics, No Show trended over time and walk-in percentage.</p> <p>In October, we had 10,723 visits which are 583 more than the month prior and 1,145 more than October 2020. Our average patient visits per weekday were 517 among all clinics and an improved average of 49 patients on Saturdays among 6 clinics. The Lantana Clinic had the highest volume with 1,869 visits, followed by the Lake Worth Clinic with 1,433.</p> <p>Our payer mix for October reflects 59% uninsured patients and 27% Managed Care.</p> <p>By visit category, Women's Health, Pediatrics and Substance Abuse met their productivity target.</p> <p>Productivity targets for in-person visits were met in the Delray Primary Care, Lewis Center Primary Care and Substance Abuse, Lantana Pediatrics, Women's Health in Lake Worth, Mangonia Behavioral Health and Substance Abuse. In the 90% and higher range were West Palm Beach Adult Primary Care and Pediatrics, Belle Glade Women's Health and Behavioral Health in Lake Worth and West Palm Beach.</p> <p>The No Show rate in October remains the same at 27%. The year-to-date Tele no-show rate is 11% of the total no-show.</p> <p>In October, the number of patients who walked in and were seen the same day totaled 2046, 19% in medical and 28% in dental. In medical, the highest percent of walk-ins by the clinic was the Lantana clinic at 22%, followed by West Palm Beach clinic with 16%. In dental, the highest percent of walk-ins by the clinic was the Delray Beach Clinic with 39%, followed by the West Palm Beach clinic with 35%.</p>	VOTE TAKEN: Mr. Mullen made a motion to approve the Operations Reports as presented. Mr. Elder duly seconded the motion. A vote was called, and the motion passed unanimously.

	<p>The Board was excited to see the percentage of patients who walk in.</p> <p>Ms. Miranda stated that all walk-ins would see a provider or be triaged by a nurse.</p> <p>Mr. Smith asked if managed care when up in percentage</p> <p>Ms. Abbott stated that there is an increase in managed care patients.</p>	
<p>8E-1. Staff Recommends a MOTION TO APPROVE Quality Reports</p>	<p>This agenda item presents the updated Quality Improvement & Quality Updates:</p> <ul style="list-style-type: none"> • Quality Council Meeting Minutes December 2021 • UDS Report – YTD October 2021 • Provider Productivity – October 2021 <p><u>PATIENT SAFETY & ADVERSE EVENTS</u> Patient safety and risk, including adverse events, peer review and chart review are brought to the board "under separate cover" on a quarterly basis.</p> <p><u>PATIENT SATISFACTION AND GRIEVANCES</u> Patient relations are to be presented as a separate agenda item.</p> <p><u>QUALITY ASSURANCE & IMPROVEMENT</u> We continue to work on improving our diabetes measures. The diabetes measure data for January-November 8, 2021, shows that our patients are currently controlled at 67% % while 26 % are uncontrolled, and 7 % of patients need data. HRSA's goal is to have 67% of patients with controlled diabetes. A list of all patients with missing data who did not have an appointment was provided to the call center to schedule an appointment before December 31st.</p> <p><u>UTILIZATION OF HEALTH CENTER SERVICES</u> Individual monthly provider productivity stratified by clinic.</p>	<p>VOTE TAKEN: Mr. Joseph Gibbons motioned to approve the Quality Reports as presented. Ms. Bullard duly seconded the motion. A vote was called, and the motion passed unanimously.</p>
<p>9. A.V.P. and Executive Director of</p>	<p>None.</p>	<p>No action necessary.</p>

Clinic Services Comments		
10. Board Member Comments	<p>The Board would like to tour the Healey Center.</p> <p>Mr. Mullens praised the Lake Worth Clinic. The staff was excellent, and he had a wonderful experience.</p> <p>Mr. Edler wished everyone a happy holiday.</p>	No action necessary.
11. Establishment of Upcoming Meetings	<p><u>January 26, 2022 (HCD Board Room)</u> 12:45 p.m. Board of Directors</p> <p><u>February 23, 2022 (HCD Board Room)</u> 12:45 p.m. Board of Directors</p> <p><u>March 30, 2022 (HCD Board Room)</u> 12:45 p.m. Board of Directors</p> <p><u>April 27, 2022 (HCD Board Room)</u> 12:45 p.m. Board of Directors</p> <p><u>May 25, 2022 (HCD Board Room)</u> 12:45 p.m. Board of Directors</p> <p><u>June 29, 2022 (HCD Board Room)</u> 12:45 p.m. Board of Directors</p> <p><u>July 27, 2022 (HCD Board Room)</u> 12:45 p.m. Board of Directors</p> <p><u>August 24, 2022 (HCD Board Room)</u> 12:45 p.m. Board of Directors</p> <p><u>September 28, 2022 (HCD Board Room)</u> 12:45 p.m. Board of Directors</p>	No action necessary.

	<u>October 26, 2022 (HCD Board Room)</u> 12:45 p.m. Board of Directors <u>November 29, 2022 (HCD Board Room)</u> 12:45 p.m. Board of Directors <u>December 14, 2022 (HCD Board Room)</u> 12:45 p.m. Board of Directors	
12. Motion to Adjourn	There being no further business, the meeting was adjourned at 1:37 p.m.	VOTE TAKEN: Ms. Tammy Jackson-Moore made a motion to adjourn. Mr. Gibbons duly seconded the motion. A vote was called, and the motion passed unanimously.
13. Closed Meeting		No action necessary.

MEMO

To: Finance Committee
From: Candice Abbott
Chief Financial Officer
Date: January 26, 2022

Subject: Management Discussion and Analysis as of November 2021 C.L. Brumback Primary Care Clinic Financial Statements.

The unaudited November statements represent the financial performance through the second month of the 2022 fiscal year for the C.L. Brumback Primary Care Clinics. Gross patient revenue YTD was favorable to budget by \$368k due to higher patient volumes than initially anticipated. Net patient revenue YTD was unfavorable to budget by (\$161k). Total YTD revenue was unfavorable to budget by (\$593k). Currently, less grant revenue has been recognized than originally budgeted, but this is likely to be a timing difference. Operational expenses before depreciation were favorable to budget by \$1.1M due mostly to positive variances in salaries, wages, and benefits \$554k, purchased services \$133k, medical supplies \$68k, drugs \$73k, and lease and rental of \$116k. Total YTD net margin was (\$2.0M) compared to budget of (\$2.8M) resulting in a favorable variance of \$810k or (29.1%).

The Medical clinics YTD gross patient revenue is unfavorable to budget by \$(522k) due to reduced patient volume of 4.1% compared to budget. Net patient revenue YTD for the Medical clinics was unfavorable to budget by (\$280k). The Medical clinics total YTD revenue was unfavorable to budget by (\$639k). This unfavorable variance resulted from reduced patient visits, and less grant revenue recognized in the first two months than anticipated. Total operating expenses of \$3.7M were favorable to the budget of \$4.8M by \$1.0M. The positive variance of \$1.0M is primarily due to vacant positions, the timing of purchased services, and the timing of real estate moves at several clinic locations. Total YTD net margin was favorable to budget by \$682k or (26.5%)

The Dental clinics total YTD gross patient revenue was favorable to budget by \$890k. Net patient revenue YTD for the Dental clinics was favorable to budget by \$119k. Total operating expenses of \$680k were favorable to budget by \$34k. Total YTD net margin was (\$82k) compared to a budget loss of (\$210k) for a favorable variance of \$129k or (61.2%).

On the Comparative Statement of Net Position, due from other governments increased from \$2.2M to \$3.6M. This balance is due mainly from Health Resources and Service Administration (HRSA) and American Rescue Plan.

Primary Care Clinics Funding Sources

Fiscal YTD November 2022 Total Revenue \$3,900,342

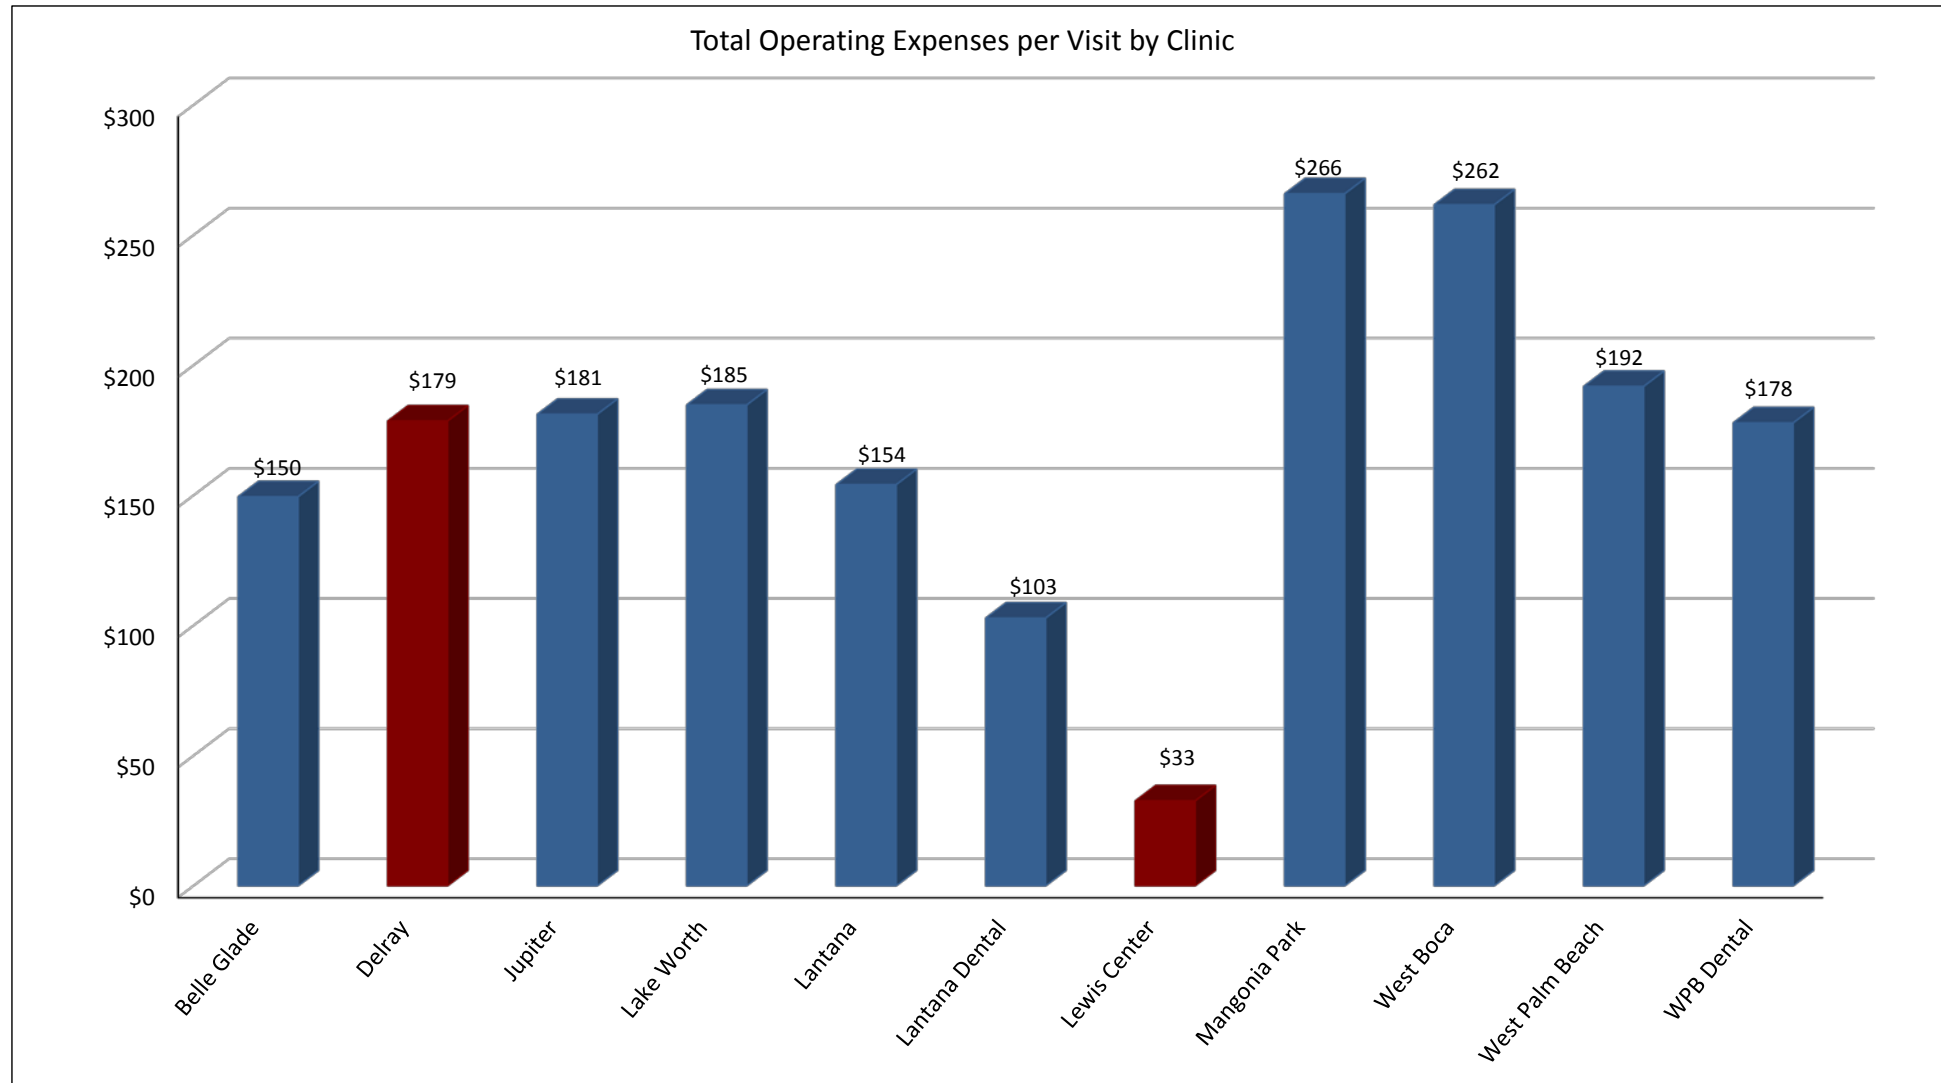

* Based on total medical and dental visits

(1) Increase in expense per visit is due to lower visits in fiscal years 2020 and 2021 related to operational changes for Covid-19

* Based on total medical, dental, and mental health visits

* Based on Fiscal Year-to-Date November 2021 total operating expenses (excludes depreciation, overhead allocations, and capital)

** Visits for the medical clinics include medical and mental health visits

Credentialing and Privileging Policy

Policy #:	PCC-CRE-600-17	Effective Date:	1/15/2020
Business Unit:	Primary Care Clinics	Last Review Date:	
Approval Group:	PCC Credentialing Policy	Document Owner(s):	Credentialing
Board Approval Date:	2/26/2020		

PURPOSE

It is the policy of the C.L. Brumback Primary Care Clinics to credential and privilege health center practitioners, employed or contracted, volunteers and locum tenens at all health care sites in accordance with state, federal and HRSA requirements.

SCOPE

This policy applies to all C.L. Brumback Primary Care Clinics practitioners, employed or contracted, volunteers and locum tenens, at all health center sites.

POLICY

Credentialing and privileging will be performed for health center practitioners at the time of hire, prior to the practitioner providing patient care services, and every two (2) years thereafter.

Categories of health center practitioners.

1. Licensed Independent Practitioner (LIP) – an individual permitted by law to provide care and services without direction or supervision, within the scope of the individual practitioner's license and consistent with individually granted privileges. C.L. Brumback Primary Care Clinics defines the following practitioners as LIP's:
 - Physician
 - Dentist
 - Physician Assistant
 - Nurse Practitioner
 - Nurse Midwife
 - Clinical Psychologist (PsyD, PhD)
 - Licensed Clinical Social Worker
 - Licensed Mental Health Counselor

2. Other Licensed or Certified Health Care Practitioner (OLCP) – an individual who is licensed, registered, or certified, but is not permitted by law to provide patient care services without direction or supervision.

C.L. Brumback Primary Care Clinics defines the following practitioners as OLCP's:

- Registered Nurse
- Licensed Practical Nurse
- Certified and/or Registered Medical Assistant
- Certified and/or Registered Dental Assistant
- Licensed Dental Hygienist
- Medical Resident
- Registered Interns

3. Other Clinical Staff (OCS) – an individual for which licensure or certification is not required and who is not permitted by law to provide patient care services without direction or supervision. C.L. Brumback Primary Care Clinics defines the following practitioners as OCS:

- Medical Assistant
- Dental Assistant
- Paramedic
- Community Health Worker

The C.L. Brumback Primary Care Clinics Board of Directors has the ultimate authority and responsibility for the provisions of this policy. The Board of Directors shall review and approve any changes to the policy and at a minimum, shall review the policy every three (3) years.

The Medical Director/Dental Director/Women's Health Director/Behavioral Health Director shall oversee the credentialing and privileging activities, provide clinical leadership and direction to credentialing staff, credential other licensed or certified health care practitioners and make credentialing and privileging recommendations of licensed independent practitioners to the Board.

The C.L. Brumback Primary Care Clinics may utilize a Credentials Verification Organization (CVO) to perform primary source verification of credentialing elements in accordance with regulatory requirements.

DISTRICT CLINIC HOLDINGS, INC.
BOARD OF DIRECTORS
JANUARY 26, 2022

1. Description: 2021 Palm Beach County Community Health Assessment

2. Summary:

This agenda item presents the Board with the 2021 Palm Beach County Community Health Improvement Plan, Service Area Map and Hours of Operation.

3. Substantive Analysis:

for the purposes of informing and improving the delivery of health center services, the HRSA Compliance Manual requires that the health center confirm their service area and hours of operation annually and complete or updates a needs assessment of the current or proposed population at least once every three years. The needs assessment utilizes the most recently available data for the service area and, if applicable, special populations and addresses the following:

- Factors associated with access to care and health care utilization (for example, geography, transportation, occupation, transience, unemployment, income level, educational attainment);
- The most significant causes of morbidity and mortality (for example, diabetes, cardiovascular disease, cancer, low birth weight, behavioral health) as well as any associated health disparities; and
- Any other unique health care needs or characteristics that impact health status or access to, or utilization of, primary care (for example, social factors, the physical environment, cultural/ethnic factors, language needs, housing status).

The next steps in this process will be the creation of the 2022 Community Health Improvement Plan (CHIP). The current CHIP focuses on the following priority areas:

- Mental and Behavioral Health
- Active Living and Health Lifestyles
- Access to Care and Services

C. L. Brumback Primary Care Clinics Implementation Strategy focuses on three key strategies that address the needs and priority areas of Palm Beach County.

1. Increase patient awareness on maintaining a healthy and active lifestyle
2. Continue integrating behavioral health into all service-lines and ensure consistent reporting of social determinants of health (PRAPARE)
3. Continue increasing access to care

The new Community Health Assessment is included with this agenda item for review.

Table of Tables

Table 1: Total Population, Palm Beach County and Florida, 5-Year Estimate, 2019	26
Table 2: Population by Census County Division, Palm Beach County, 5-Year Estimate, 2019	27
Table 3: Population Change by Age Group, Palm Beach County, 5-Year Estimate, 2018-2019	28
Table 4: Total Population by Sex, Palm Beach County and Florida, 5-Year Estimate, 2019	29
Table 5: Population by Age, Palm Beach County and Florida, 5-Year Estimate, 2019	30
Table 6: Population by Census County Division, By Sex and Age, Western Palm Beach County CCD's, 5-Year Estimate, 2019	32
Table 7: Population by Census County Division, By Sex and Age, Northern Palm Beach County CCD's, 5-Year Estimate, 2019	32
Table 8: Population by Census County Division, By Sex and Age, Southern Palm Beach County CCD's, 5-Year Estimate, 2019	33
Table 9: Population by Race and Ethnicity, Palm Beach County and Florida, 5-Year Estimate, 2019	34
Table 10: Population by Census County Division, By Race and Ethnicity, Western Palm Beach County CCDs, 5-Year Estimate, 2019	37
Table 11: Population by Census County Division, By Race and Ethnicity, Northern Palm Beach County CCDs, 5-Year Estimate, 2019	38
Table 12: Population by Census County Division, By Race and Ethnicity, Southern Palm Beach County CCD's, 5-Year Estimate, 2019	39
Table 13: Population by Language Spoken at Home, Palm Beach County, 5-Year Estimate, 2019.....	40
Table 14: Population by Place of Birth, Palm Beach County and Florida, 5-Year Estimate, 2019	42
Table 15: Population by Place of Birth – Americas, Palm Beach County and Florida, 5-Year Estimate, 2019.....	43
Table 16: Grandparents Living With Own Grandchildren Under 18 Years By Responsibility For Own Grandchildren By Length Of Time Responsible For Own Grandchildren For The Population 30 Years And Over, Palm Beach County and Florida, 5-Year Estimate, 2019	45
Table 17: Population Living with a Disability, Palm Beach County CCD's and Florida, 5-Year Estimate, 2019.....	46
Table 18: Population with a Disability, By Sex, Age, Race, and Ethnicity, Palm Beach County and Florida, 5-Year Estimate, 2019	47
Table 19: Population Living with a Disability, By Race and Ethnicity, Western Palm Beach County CCD's, 5-Year Estimate, 2019	50
Table 20: Population Living with a Disability, By Race and Ethnicity, Northern Palm Beach County CCDs, 5-Year Estimate, 2019	51
Table 21: Population Living with a Disability, By Race and Ethnicity, Southern Palm Beach County CCD's, 5-Year Estimate, 2019	52
Table 22: Population with a Disability, By Age and Type, Palm Beach County and Florida, 5-Year Estimate, 2019 ..	53
Table 23: Poverty Guidelines, Florida, 2019	55
Table 24: Poverty Status in the Past 12 Months, By Age and Sex, Palm Beach County and Florida, 5-Year Estimate, 2019	56
Table 25: Poverty Status by Census County Division, By Age and Sex, Western Palm Beach County CCDs, 5-Year Estimate, 2019	57
Table 26: Poverty Status by Census County Division, By Age and Sex, Northern Palm Beach County CCDs, 5-Year Estimate, 2019	58
Table 27: Poverty Status by Census County Division, By Age and Sex, Southern Palm Beach County CCDs, 5-Year Estimate, 2019	59
Table 28: Poverty Status in the Past 12 Months, By Race and Ethnicity, Palm Beach County and Florida, 5-Year Estimate, 2019	60

Table 29: Poverty Status in the Past 12 Months, Families, Palm Beach County and Florida, 5-Year Estimate, 2019	63
Table 30: Poverty Status in the Last 12 Months, Families, By Race and Ethnicity, Palm Beach County and Florida, 5-Year Estimate, 2019	64
Table 31: Poverty Status by Census County Division, By Race and Ethnicity, Western Palm Beach County CCDs, 5-Year Estimate, 2019	66
Table 32: Poverty Status by Census County Division, By Race and Ethnicity, Northern Palm Beach County CCDs, 5-Year Estimate, 2019	67
Table 33: Poverty Status by Census County Division, By Race and Ethnicity, Southern Palm Beach County CCDs, 5-Year Estimate, 2019	68
Table 34: Poverty Status in the Past 12 Months of Grandparents Living with Own Grandchildren Under 18 Years by Responsibility for own Grandchildren, Palm Beach County and Florida, 5-Year Estimate, 2019	69
Table 35: Poverty Status in the Past 12 Months of Grandparents Living with Own Grandchildren Under 18 Years by Responsibility for Own Grandchildren, Western Palm Beach County CCDs, 5-Year Estimate, 2019	70
Table 36: Poverty Status in the Past 12 Months of Grandparents Living with Own Grandchildren Under 18 Years by Responsibility for Own Grandchildren, Northern Palm Beach County CCDs, 5-Year Estimate, 2019	71
Table 37: Poverty Status in the Past 12 Months of Grandparents Living with Own Grandchildren Under 18 Years by Responsibility for Own Grandchildren, Southern Palm Beach County CCDs, 5-Year Estimate, 2019	72
Table 38: ALICE Population, Palm Beach County and Florida, 2018	73
Table 39: ALICE Population, Palm Beach County CCDs, 2018	73
Table 40: Per Capita Income and Earnings, Palm Beach County and Florida, 5-Year Estimate, 2019	74
Table 41: Household Income and Benefits, Palm Beach County and Florida, 5-Year Estimate, 2019	76
Table 42: Family Income, Palm Beach County and Florida, 5-Year Estimate, 2019	77
Table 43: GINI Index, Palm Beach County, Florida, and Surrounding Counties, 5-Year Estimate, 2019	79
Table 44: Homeless Count by Continuum of Care, Palm Beach County and Florida, 2017-2021	81
Table 45: Homeless Students by District, Palm Beach County and Florida, School Years 2014-2015 Through 2019-2020	83
Table 46: School Enrollment, Palm Beach County and Florida, 5-Year Estimate, 2019	84
Table 47: School Enrollment by Type, Palm Beach County and Florida, 1-Year Estimate, 2019	85
Table 48: Educational Attainment, Palm Beach County and Florida, 5-Year Estimate, 2019	86
Table 49: Educational Attainment, By Race and Ethnicity, Palm Beach County and Florida, 5-Year Estimate, 2019	88
Table 50: High School Graduation Rates, Palm Beach County and Florida, School Years 2016-2017 Through 2019-2020	90
Table 51: School Grades by Year (Average), Palm Beach County, 2014-2015 School Year Through 2018-2019 School Year	92
Table 52: Percentage of Total Students Passing, Score of 3 and Above, Palm Beach County and Florida, School Years 2017-2018 Through 2020-2021	93
Table 53: Employment Status, Palm Beach County and Florida, 5-year Estimate, 2019	94
Table 54: Unemployment Rate, Palm Beach County and Florida, 1-Year Estimate, 2019	96
Table 55: Free and Reduced Lunch Status, Palm Beach County and Florida, School Year 2020 – 2021	101

Acknowledgements

The Health Council of Southeast Florida would like to thank the Florida Department of Health in Palm Beach County and the Health Care District of Palm Beach County for their continued partnership and support in developing the Community Health Assessment. The leadership, guidance, and commitment displayed by both of these agencies makes efforts like this impactful and fruitful for partnering agencies, community members, and public health efforts across the county.

Health Council of Southeast Florida would also like to extend sincere gratitude and appreciation to all of the Palm Beach County residents who participated and contributed to this effort. By sharing their experiences and opinions, these residents gave a voice to their community and will inspire change for the future of Palm Beach County.

Furthermore, we would like to thank the partnering organizations who contributed to this effort. These agencies displayed compassion and dedication throughout the process, and have served as a guiding light and resource for community members in Palm Beach County.

Thank you to all who participated and work to continuously understand and improve the health of Palm Beach County.

“Alone, we can do so little; together, we can do so much.”

-Helen Keller

Methodology

In 2021, the Health Care District of Palm Beach County and the Florida Department of Health in Palm Beach County engaged the Health Council of Southeast Florida (HCSEF) to facilitate a comprehensive health assessment for Palm Beach County to identify health indicators within the community that present areas of concern, gaps in care or services and opportunities for improvement. Specifically, the Community Health Assessment includes information and data on the following areas:

- Demographic characteristics
- Socioeconomic characteristics
- Maternal and child health
- COVID-19
- Behavioral health
- Death, illness and injury
- Infectious diseases
- Health resource availability and access

This report includes quantitative secondary data from national, state and local database systems and primary qualitative data. Quantitative data were obtained from secondary sources, including but not limited to the: U.S. Census Bureau, Florida Agency for Health Care Administration (AHCA), Florida Department of Health (FDOH), Florida Department of Children and Families (DCF), Centers for Disease Control and Prevention (CDC), Florida's Bureau of Vital Statistics, Florida Department of Juvenile Justice and Florida Department of Education. Quantitative data tables and figures in this report are formatted to facilitate review, examination and utilization by the community. In many cases, the data, as it was gathered from the source, contained confidence intervals or margins of error, which are statistical calculations that refer to the potential variation in the numbers shown when the data is gathered from a subset of the population. These have been omitted from this assessment in an effort to make the data more approachable to the community. Some sources are only available for certain years based on data collection timelines therefore, results from those sources may be presented in varying years or multi-year estimates. Where available, five-year estimates from the US. Census Bureau were used to capture the most complete data for the report. In addition, the most recent full-year data sets were used for indicators throughout the report. Data is presented throughout the report in as much detail as possible, including data disaggregated by race, ethnicity, sex, age, or Census County Division (CCD).

The qualitative data are a result of primary data collection efforts through local public health system assessments, focus groups and key informant interviews. Data was collected, analyzed and compiled for this assessment to enable and guide Palm Beach County service providers, educators, planners, funders and community leaders in identifying indicators within the community that should be addressed to improve the health and wellbeing of Palm Beach County residents.

Demographic and Socioeconomic Profile

Palm Beach County was formerly apart of Dade County then in 1909 the early settlers established it as a separate county. Today Palm Beach County is the largest county in Florida covering about 2,383 square miles of land and water in the southeast region of the state. The county is comprised of 39 municipalities. The northernmost community is Tequesta, the southernmost is Boca Raton, and the westernmost is South Bay. West Palm Beach is the largest city in Palm Beach County and is also the county seat. Bordering Palm Beach County is Martin County to the north, the Atlantic Ocean to the east, Broward County to the south, Hendry County to the west, and Lake Okeechobee in the northwest.

In 2019, Palm Beach County had a total population of 1,465,027 residents, which accounted for approximately 7% of the state's population. And the county's population is continuing to grow. Compared to the state, Palm Beach County is home to a relatively large senior population with nearly one-fourth of the residents comprised of those 65 years and over. This number is higher than Florida (20.1%) and the United States (16.5%). Also, to note, is that a quarter of the county's residents were born outside of the United States, a number that is higher than the state of Florida (20%) and nearly double the national percentage (13.5%). Black or African American residents comprise 18.7 percent of the population while Hispanic/Latino residents are 22.4 percent of the population. With such diversity, Palm Beach County will only thrive and reach its greatest potential through understanding the context for the disenfranchisement and marginalization of the population and subpopulations that currently exist and, in fact have persisted for many years.

Demographics include factors such as race and ethnicity, age, English language proficiency, household type, population density, etc., all of which influence health outcomes. The aim of the demographic and socioeconomic profile is to provide context for the remaining sections by providing an overview of the demographic and socioeconomic characteristics of the residents of Palm Beach County. These characteristics provide context for the health care needs of the community and are indicators and predictors for health care utilization patterns and health outcomes. Furthermore, the demographic and socioeconomic profile of a community provides information important in the identification of barriers to accessing health care services.

The data included in this report is specific to Palm Beach County and in many cases, for comparison purposes, data is presented for the state of Florida as well as surrounding counties. Throughout the report, certain sections will include references to the Healthy People 2030 target goals. The targets are included to provide a benchmark and potentially aid in future health planning and goal-setting activities.

Demographic Characteristics

Population

Total Population

The table below shows Palm Beach County's population count compared to the state of Florida's, as well as the proportion of Florida's population that is made up of Palm Beach County residents, as of 2019. According to the U.S. Census Bureau, Palm Beach County's population grew to 1,465,027 residents in 2019. The county made up approximately 7.0% of Florida's total population of 20,901,636 residents in 2019.

Table 1: Total Population, Palm Beach County and Florida, 5-Year Estimate, 2019

Palm Beach County		Florida	
Population	Percent	Population	Percent
1,465,027	7.0%	20,901,636	100%

Figure 1: Total Population, Palm Beach County and Florida, 2019

Population by Census County Division

A Census County Division (CCD) is an established area set by the U.S. Census Bureau and state and local governments. CCDs are an important way to analyze and depict data by smaller sub-sections of the county.

In Palm Beach County, there are eleven established CCDs, including Belle Glade-Pahokee, Boca Raton, Boynton Beach-Delray Beach, Glades, Jupiter, Lake Worth, Riviera Beach, Royal Palm Beach-West Jupiter, Sunshine Parkway, Western Community, and West Palm Beach. The table below shows the population by CCD in Palm Beach County in 2019. Among these areas, the Boynton Beach-Delray Beach CCD was the most populous in 2019 with 23.0% of the county's population, followed by the Lake Worth CCD (15.8%) and Sunshine Parkway CCD (14.5%). The least populous CCD was the Glades CCD, with 309 residents counted in 2019.

Table 2: Population by Census County Division, Palm Beach County, 5-Year Estimate, 2019

Census Count Division (CCD)	Count	Percent
Total Population	1,465,027	100.0%
Belle-Glade-Pahokee CCD	37,326	2.5%
Boca Raton CCD	138,198	9.4%
Boynton Beach-Delray Beach CCD	336,806	23.0%
Glades CCD	309	0.0%
Jupiter CCD	95,352	6.5%
Lake Worth CCD	231,897	15.8%
Riviera Beach CCD	109,559	7.5%
Royal Palm Beach-West Jupiter CCD	110,537	7.5%
Sunshine Parkway CCD	213,091	14.5%
Western Community CCD	30,844	2.1%
West Palm Beach CCD	161,108	11.0%

Population Growth and Change

Population growth is a key factor used to determine the composition and need of a community. As populations grow and age, needs will evolve and services will expand.

The table below depicts the population change by age group between 2018 and 2019 in Palm Beach County. The population of Palm Beach County grew 1.3% from 1,446,277 in 2018 to 1,465,027 in 2019. The largest population increase was reported among those ages 60 to 64 years old, with a 3.7% increase from 2018 to 2019. Those ages 20 to 24 years old saw the largest population decrease (0.9%) during this timeframe. The median age for Palm Beach County increased from 44.6 years old to 44.8 years old from 2018 to 2019.

Table 3: Population Change by Age Group, Palm Beach County, 5-Year Estimate, 2018-2019

Age Group	2018 Population	2019 Population	Percent Change 2018-2019
Total population	1,446,277	1,465,027	1.3%
Under 5 years	74,181	75,202	1.4%
5 to 9 years	77,315	77,203	-0.1%
10 to 14 years	78,524	79,435	1.1%
15 to 19 years	81,182	81,596	0.5%
20 to 24 years	80,323	79,597	-0.9%
25 to 34 years	171,605	174,466	1.6%
35 to 44 years	166,862	168,510	1.0%
45 to 54 years	191,753	190,924	-0.4%
55 to 59 years	97,722	98,675	1.0%
60 to 64 years	89,902	93,375	3.7%
65 to 74 years	164,266	168,626	2.6%
75 to 84 years	114,719	118,401	3.1%
85 years and over	57,923	59,017	1.9%
Median age (years)	44.6	44.8	0.4%

Population by Sex

Previous research indicates that sex can have a significant influence on health outcomes. Males and females may show different disease related symptoms and experience different disease risks. Additionally, different sexes may be more or less susceptible to certain diseases. For example, about 80% of those affected by autoimmune diseases are female, but autoimmune conditions in males are typically more severe.¹

The following table shows the total population by sex in Palm Beach County and Florida in 2019. Among Palm Beach County residents, 48.5% were male and 51.5% were female in 2019. The state had a similar trend overall, with 48.9% of the population being male and 51.1% being female this same year. The below chart depicts male and female counts within Palm Beach County and the state of Florida in 2019.

Table 4: Total Population by Sex, Palm Beach County and Florida, 5-Year Estimate, 2019

	Palm Beach County		Florida	
	Count	Percent	Count	Percent
Total population	1,465,027	100%	20,901,636	100%
Male	710,241	48.5%	10,220,813	48.9%

Population by Age

According to the World Health Organization, the pace of population aging is increasing at a much faster pace than ever seen before. By 2030, one out of every six people will be age 60 years or older.² The following table depicts the Palm Beach County and Florida residential population by age in 2019. Among Palm Beach County residents, 19.2% were under the age of 18 years old in 2019. Those who were 18 years old and over made up 80.5% of the population. This population proportion is similar to that of the state as a whole, where 20.0% of the population was under 18 years old and 80.0% was 18 years old and older in 2019. Additionally, 27.3% of Palm Beach County residents were over 62 years of age, while 23.9% of all Florida residents were over the age of sixty-two years.

Figure 3: Population by Age, Palm Beach County and Florida, 2019

Population by Census County Division, By Sex and Age

Further breakdown of the population by Census County Division (CCD) can provide insight into the specific makeup of certain regions of the county.

The table below depicts population by CCD by sex and age in Western Palm Beach County CCDs in 2019. For this report, the Western Palm Beach County CCDs include Belle Glade-Pahokee CCD, Glades CCD, and Western Community CCD. Among these areas, the Western Community CCD had the highest median age (43.2 years) compared to the other CCDs. Among each of the CCDs in this region, there is a larger percentage of males compared to females.

The following table shows the population by CCD by sex and age in Northern Palm Beach County CCDs in 2019. Northern Palm Beach County CCDs include Jupiter CCD, Riviera Beach CCD, Royal Palm Beach-West Jupiter CCD, and West Palm Beach CCD. Among these areas, Jupiter CCD had the highest median age (47 years). Among each of the CCDs in the Northern Palm Beach County CCD grouping, a majority of residents were female.

Lastly, this table shows the population by CCD by sex and age in Southern Palm Beach County CCDs in 2019. the Southern Palm Beach County CCD's noted in this report include Boca Raton CCD, Boynton Beach-Delray Beach CCD, Lake Worth CCD, and Sunshine Parkway CCD. The eldest median age for these areas was found in Boca Raton (51.8 years), which was also the highest median age among all CCD's in Palm Beach County. A majority of residents in this region were female.

Population by Race and Ethnicity

The table and graphs below show the population by race and ethnicity in Palm Beach County and Florida in 2019. According to the 2019 American Community Survey conducted by the U.S. Census Bureau, a majority of Palm Beach County residents were White and non-Hispanic or Latino in 2019. Approximately 73.5% of Palm Beach County residents were White, while 18.7% were Black or African American. The state of Florida reflected a similar trend, with 75.1% of residents identifying as White and 16.1% of residents identifying as Black or African American.

Additionally, 77.6% of Palm Beach County residents were non-Hispanic, while 22.4% were Hispanic or Latino. Across the state of Florida, 74.4% of residents were non-Hispanic, while 15.6% were Hispanic or Latino. This is significant because research indicates that health disparities exist among certain racial and ethnic groups, leading to poorer health outcomes, disproportionate access to care, and overall inequities related to diagnoses and treatment of health conditions. For instance, certain racial and ethnic suffer from higher rates of chronic disease and premature death compared to their White counterparts.³

Population by Census County Division, By Race and Ethnicity

Further population analysis can be conducted by Census County Division (CCD). This table shows the population by CCD by race and ethnicity in the Western Palm Beach County CCDs in 2019. Among these CCDs, the Glades CCD reported the highest percentage of Hispanic or Latino residents in 2019 at nearly half the population (48.9%). This was also the highest percentage of Hispanic or Latino residents across all Palm Beach County CCDs. The Belle Glade-Pahokee CCD population was 58.6% Black or African American and 36.0% White, compared to 26.9% Black or African American and 73.1% White in the Glades CCD. Additionally, 12.8% of the Western Community CCD reported being Black or African American, whereas 78.6% reported being White. In the

Population by Language Spoken at Home

Language can serve as a barrier to accessing and obtaining necessary medical care. The table and figures below show the population by language spoken at home in Palm Beach County in 2019. As seen here, 32.1% of residents spoke a language other than English at home in 2019. Among this group, 13.3% spoke English less than “very well.” Spanish (19.0%) was the most common language spoken at home other than English (67.9%).

Table 13: Population by Language Spoken at Home, Palm Beach County, 5-Year Estimate, 2019

Population by Place of Birth

Place of birth can influence an individual's cultural preferences and language. As such, place of birth is an important indicator when it comes to understanding the health and makeup of a community.

The table below shows the population by place of birth in Palm Beach County and Florida in 2019. Of Palm Beach County's population, approximately one quarter (25.4%) were foreign-born in 2019. Among the foreign-born population in Palm Beach County, 2.8% were born in parts of Europe, 2.4% were born in Asia, 0.5% were born in Africa, and 19.6% were born in a region of America other than the United States. Additionally, Palm Beach County had a slightly higher foreign-born population rate at 25.4% compared to Florida's overall foreign-born population rate of 20.7% in 2019.

This table shows the population by place of birth, specifically in the Americas, in Palm Beach County and Florida in 2019. Among the foreign-born population in Palm Beach County, 19.6% of these residents were born in a portion of the Americas other than the United States. A majority of these residents were born in Latin America (18.8%). Residents born in South America made up 4.6% of this population, followed by residents born in Central America who made up 4.4% of this population in 2019.

Grandparents

Grandparents

Research shows that grandparents who raise their grandchildren experience positive impacts, including the satisfaction associated with providing for and raising a child. However, grandparents raising their own grandchildren may also report challenges, including isolation from peers, physical and emotional challenges associated with raising a child, and shame linked to perceived stigma.⁴

The table below shows the number and percentage of grandparents living with and responsible for grandchildren under 18 years of age based on the length of time responsible for their grandchildren in Palm Beach County and Florida in 2019. In Palm Beach County, 28% of grandparents living with their grandchildren under 18 years of age were responsible for their grandchildren. Nearly half (49.3%) of these grandparents had been responsible for their grandchildren under 18 years of age for 5 years or longer. A similar trend was seen across the state of Florida, where 29.6% of grandparents living with their own grandchildren under the age of 18 years were responsible for their grandchildren.

Table 16: Grandparents Living with Own Grandchildren Under 18 Years by Responsibility for Own Grandchildren by Length of Time Responsible for Own Grandchildren for The Population 30 Years and Over, Palm Beach County and Florida, 5-Year Estimate, 2019

	Palm Beach County		Florida	
	Count	Percent	Count	Percent

Population with a Disability

Population Living with a Disability

Living with a disability can present additional medical and socioeconomic complications for residents. Research has shown that adults with disabilities are four times more likely to report their health as fair or poor compared to people with no disabilities.⁵

The following table shows the percentage of the total population living with a disability in Palm Beach County by CCD and Florida in 2019. In the state of Florida, 13.4% of the population was living with a disability in 2019.

Comparatively, the rate was lower in Palm Beach County, with 12.3% of the population living with a disability at the time. Among Palm Beach County CCDs, the rate was highest in the Boynton Beach-Delray Beach CCD (14.9%), Belle Glade-Pahokee CCD (13.7%), West Palm Beach CCD (12.3%), Riviera Beach CCD (12.2%), and Lake Worth CCD (12.1%).

Table 17: Population Living with a Disability, Palm Beach County CCD's and Florida, 5-Year Estimate, 2019

Population with a Disability, By Sex, Age, Race, and Ethnicity

In addition to the health and socioeconomic disparities that people with disabilities experience, disparities based on sex, age, race, and ethnicity can further exacerbate issues. Certain racial and ethnic populations experience health disparities at an increased rate compared to their White, non-Hispanic counterparts⁶. Understanding the intersection of these factors among those with disabilities can help programs and policymakers better address the complex issues at hand for these populations.

The table below shows the population with a disability by sex, age, race, and ethnicity in Palm Beach County and Florida in 2019. Among Palm Beach County residents, the percentage of males and females living with a disability was relatively equal in 2019, with 12.0% of males and 12.6% of females living with a disability. The percentage of the population living with a disability was exponentially higher among those ages 75 years and older (42.5%) compared to all other age groups and lowest among those ages five years or younger (0.4%). Native Hawaiian and other Pacific Island residents had the highest percentage of their population living with a disability (28.8% of the population). Among the Hispanic or Latino population, 8.3% of this population reported living with a disability in 2019, as compared to 15.2% of the non-Hispanic resident population.

Population Living with a Disability, By Race and Ethnicity

The table below depicts the racial and ethnic characteristics of those living with a disability in the Western Palm Beach County Census County Divisions (CCDs) in 2019. It is important to note that 15.6% of Black or African American residents in the Belle Glade-Pahokee CCD had a disability in 2019. This was the largest percentage of any racial population with a disability in the Western Palm Beach County CCD grouping.

This table shows the racial and ethnic characteristics of those living with a disability in the Northern Palm Beach County Census County Divisions (CCDs) in 2019. In this CCD grouping, the Jupiter CCD had the highest percentage of Black or African American residents with a disability (12.4%). The Royal Palm Beach-West Jupiter CCD had the highest percentage of Hispanic or Latino residents with a disability (9.7%) in 2019.

The following table shows the racial and ethnic characteristics of those living with a disability in the Southern Palm Beach County CCDs in 2019. In this CCD grouping, 17.1% of the Boynton Beach-Delray Beach CCD White population had a disability in 2019. The Boynton Beach-Delray Beach CCD had the highest percentage of Hispanic or Latino residents living with a disability (9.1%), closely followed by the Lake Worth CCD (9.0%)

Population with a Disability by Age and Type

People who live with a disability are more likely to face health care disparities compared to those without a disability due to social and environmental challenges relating to the social determinants of health. For example, these challenges can result in lower screening rates and increased challenges when accessing care. Those with disabilities may also experience lower educational attainment, lower incomes, and higher unemployment. Additionally, research shows that people with disabilities are more likely to use tobacco, forgo physical activity, and be obese or overweight.⁷ Such behaviors and social and environmental challenges can lead to poorer health outcomes for those with disabilities, so it is important to understand the characteristics of the Palm Beach County residents who have a disability.

The table below depicts the population with a disability in Palm Beach County compared to that of Florida by resident age and type of disability in 2010. Among all age groups, those ages 65 years and older were most likely to have a disability in Palm Beach County. Among this specific population, the disability categories most frequently reported were ambulatory difficulty (19.3%) and hearing difficulty (12.6%).

Socioeconomic Characteristics

Poverty

Those who live in poverty face increased socioeconomic challenges that can affect healthcare access and utilization. Without proper resources and assistance programs, those in poverty may forgo medical appointments or necessary medications due to cost barriers. Neglecting needed health services and delaying care can then exacerbate financial and medical complications in the future.

Poverty Guidelines

The table below shows the official poverty guidelines for the state of Florida, updated in 2019 to reflect the most recent income thresholds based on household size. For a family of four living in Florida in 2019, the poverty guideline was \$32,187.50 (125% of the Federal Poverty Level). It is important to note that the 2019 Federal Poverty Guidelines were used in this report because the most recent Census data related to demographics and socioeconomic status is from 2019. This allows for accurate and mindful comparisons to be made across the data in the report.

Table 23: Poverty Guidelines, Florida, 2019

Household /Family Size	100%	125%	133%	135%	150%	200%	250%

Poverty Status in the Past 12 Months, By Age and Sex

The table below depicts the poverty status by age and sex in Palm Beach County and Florida in 2019. Nationally, poverty rates among women remain higher than their male counterparts.⁸ In Palm Beach County, more females (13.2%) were living below the poverty level than males (11.1%). Similar trends were seen in the state of Florida as a whole, as depicted in the table below. Of all Palm Beach County residents, 12.2% of residents were living below the poverty level in 2019. Among county residents under 18 years of age, 18.1% were living below the poverty line, which was the highest percentage of individuals living below the poverty line among all age groups. Among residents 18 years of age or older, those 18 to 64 years old (11.4%) had the second highest percentage of individuals living below the poverty level, followed by residents ages 65 years and older (9.2%).

The Healthy People 2030 national target is to reduce the proportion of people living in poverty to 8.0%.⁹ As of 2019, Palm Beach County (12.2%) is not yet meeting this target.

Poverty Status by Census County Division (CCD), By Age and Sex

Further breakdown of poverty status by age and sex can provide insight into health and socioeconomic status by county region. This table shows the poverty status by CCD by age and sex for the Western Palm Beach County CCDs in 2019. In this area, the Belle Glade-Pahokee CCD had the greatest percentage of residents living below the poverty level (41.0%), followed by the Glades CCD (37.9%). Across all CCDs, females were more likely than males to be below the poverty line (note that Glades CCD did not have data broken down by sex). In the Belle Glade-Pahokee CCD, which had the highest percentage of residents below the poverty level, those under the age of 18 were the most affected by poverty. Over half (53.6%) of residents under the age of 18 in this area were living below the poverty level.

The following table shows the poverty status by CCD by age and sex for the Northern Palm Beach County CCDs in 2019. Females experienced poverty in greater percentages compared to their male counterparts in the Jupiter CCD (9.0%), Royal Palm Beach-West Jupiter CCD (7.6%), and West Palm Beach CCD (21.2%). Additionally, in the West Palm Beach CCD, 34.4% of residents under the age of 18 years were living in Poverty in 2019.

Lastly, the table below shows the poverty status by CCD by age and sex for the Southern Palm Beach County CCDs in 2019. Among these CCDs, Lake Worth CCD had the greatest percentage of residents living below the poverty level (16.6%) in 2019. Approximately one-quarter of Lake Worth CCD's population under the age of 18 years lived in poverty. Overall, females in each Southern Palm Beach County CCD experienced poverty in higher percentages compared to their male counterparts.

Poverty Status in the Past 12 Months, By Race and Ethnicity

Poverty status is associated with a decreased ability to access care and services in a timely, quality manner.¹⁰ It is thus imperative to consider the population's racial and ethnic composition when developing and targeting programming intended to improve the health of the community.

This table and graphs below show the poverty status of Palm Beach County and Florida residents by race and ethnicity in 2019. During this year, the Census reported that Black residents made up 13.2% of the United States population but accounted for 23.8% of the population living in poverty. A greater percentage of Palm Beach County Black or African American residents (19.4%) were living in poverty in 2019 compared to White residents (10.1%). When examining ethnicity, Hispanic residents made up 18.7% of the total United States population in 2019 but accounted for 28.1% of the population living in poverty. Notably, 17.6% of Hispanic or Latino residents were living in poverty compared to their White, non-Hispanic counterparts (7.7%).

Figure 12: Poverty Status in the Past 12 Months, By Ethnicity, Palm Beach County and Florida, 2019

Poverty Status in the Past 12 Months, By Families

Families in poverty may have unique needs compared to other groups. In families with children living in poverty, stigma and stressors resulting from poverty status can affect both parents and children individually, as well as the overall family dynamic. Families in poverty often experience issues with transportation, access to needed services due to financial barriers, unsafe or inadequate living conditions, and more.¹¹

The chart below details poverty status of families and families with children under the age of 18 years old in Palm Beach County and Florida in 2019. Approximately 8.4% of families in Palm Beach County had experienced poverty in the last 12 months. Among those, 14.1% had children under the age of 18 years old.

Poverty Status in the Past 12 Months, Families, By Race and Ethnicity

Racial and ethnic populations experience poverty at higher proportions as compared to their White, non-Hispanic counterparts. The table below outlines family poverty status by race and ethnicity in Palm Beach County and Florida in 2019. Overall, 8.4% of Palm Beach County families were living below the poverty level. This rate was highest among Black or African American families (15.9%) compared to all other races. The state of Florida reported a higher rate of families living in poverty than the county, with 10.0% of families overall living below the poverty level. Additionally, 18.1% of Black or African American families lived below the poverty level, the highest proportion of all races. It is important to note that 14.1% of Palm Beach County families who lived in poverty in 2019 had children under the age of 18 living in the home compared to the state rate of 16.3%.

Poverty Status by Census County Division (CCD), By Race and Ethnicity

Poverty status can also be examined by Census County Division (CCD) to provide insight based on region of the county. The following table shows the poverty status by CCD by race and ethnicity in the Western Palm Beach County CCD in 2019. The Belle Glade-Pahokee CCD reported the highest percentage of residents living below the poverty level (41.0%) compared to the other Western Palm Beach County CCDs. In the Belle Glade-Pahokee CCD and the Western Community CCD, a greater percentage of Hispanic or Latino residents were living below the poverty level than their non-Hispanic counterparts.

Lastly, the table below shows the poverty status by CCD by race and ethnicity in the Southern Palm Beach County CCD in 2019. Among the Southern Palm Beach County CCDs, Lake Worth CCD reported the greatest percentage of the population living below the poverty level in 2019 (16.6%) followed by the Boynton Beach-Delray Beach CCD (10.4%). The Lake Worth CCD also had the greatest percentage of the population reporting as Hispanic of Latino (21.3%) compared to all other Southern Palm Beach County CCDs.

Poverty Status in the Past 12 Months of Grandparents Living with Own Grandchildren Under 18 Years by Responsibility for Own Grandchildren, By Families

Grandparents raising grandchildren can create a unique family structure that comes with complex needs. Research has shown that grandparents who are responsible for raising their grandchildren are more vulnerable to negative health outcomes, social isolation, and depression. These families may also face added legal, financial, school-based, parenting, and relationship issues.¹² For these reasons, it is important to consider grandparents raising grandchildren when assessing the health of a community.

The table below shows the poverty status of grandparents living with their grandchildren under 18 years of age in Palm Beach County and Florida in 2019. Among Palm Beach County grandparents living with their own grandchildren, 14.7% reported an income below the poverty level and 85.3% reported an income above the poverty level. This was comparable to the respective state rates, where 14% of grandparents reported an income below the poverty level and 86.0% reported an income above the poverty level in 2019.

Table 34: Poverty Status in the Past 12 Months of Grandparents Living with Own Grandchildren Under 18 Years by Responsibility for own Grandchildren, Palm Beach County and Florida, 5-Year Estimate, 2019

	Palm Beach County		Florida

Poverty Status in the Past 12 Months of Grandparents Living with Own Grandchildren Under 18 Years by Responsibility for Own Grandchildren, By Families

Poverty status among grandparents caring for their own grandchildren can be further analyzed by Census County Division (CCD) to provide insight into regional trends and needs.

This table shows the poverty status of grandparents living with their own grandchildren under 18 years of age in the Western Palm Beach County CCDs in 2019. In this area, 44.9% of Belle Glade-Pahokee grandparents living with their own grandchildren lived below the poverty level. This was the highest percentage among all Western CCDs. Of those, 25.7% were responsible for their own grandchildren under the age of eighteen years old.

Table 35: Poverty Status in the Past 12 Months of Grandparents Living with Own Grandchildren Under 18 Years by Responsibility for Own Grandchildren, Western Palm Beach County CCDs, 5-Year Estimate, 2019

The following table shows the poverty status among grandparents living with their own grandchildren under 18 years of age in the Northern Palm Beach County CCDs in 2019. The West Palm Beach CCD reported the highest percentage of grandparents living with their own grandchildren while living below the poverty level (28.5%).

Table 36: Poverty Status in the Past 12 Months of Grandparents Living with Own Grandchildren Under 18 Years by Responsibility for Own Grandchildren, Northern Palm Beach County CCDs, 5-Year Estimate, 2019

Lastly, this table shows the poverty status of grandparents living with their own grandchildren under 18 years of age in the Southern Palm Beach County CCDs in 2019. In this area, the Lake Worth CCD reported that 16.5% of grandparents living with their grandchildren had an income that placed them below the poverty level.

ALICE

ALICE Population

Asset Limited, Income Constrained, Employed, or ALICE, households are households where residents are earning more than the Federal Poverty Level but less than the basic cost of living for the area. This is also known as the ALICE threshold. Individuals and families who fall into the ALICE threshold are living paycheck to paycheck and struggle to afford necessities, despite employment. In the event of a crisis, these households are at risk of poverty.

The table below shows the percentage of ALICE households compared to the percentage of households in poverty in Palm Beach County and Florida in 2018. In Florida, the median household income in 2018 was \$55,462 compared to \$61,691 in Palm Beach County. Approximately 34% of households in Palm Beach County fit the ALICE definition compared to 33% at the state level. This is significant because only 12% of Palm Beach County households were living in poverty in 2018, underscoring the additional number of households in the county that are not included in this number but are nonetheless struggling to make enough money to meet basic needs.

Table 38: ALICE Population, Palm Beach County and Florida, 2018

	Total Households	% ALICE Households	% Households in Poverty
Palm Beach County	552,286	34.0%	12.0%
Florida	--	33.0%	13.0%

ALICE Population, Palm Beach County CCDs

This table depicts the percentage of households falling in the ALICE threshold in each Palm Beach County CCD in 2018. This information can help providers understand the population's needs in their region of the county. The Belle Glade-Pahokee CCD (83.0%) and Glades CCD (83.0%) had the highest percentage of households falling in the ALICE threshold compared to the rest of the Palm Beach County CCDs. Alternatively, Western Community CCD (29.0%) had the lowest proportion of households falling in the ALICE threshold.

Table 39: ALICE Population, Palm Beach County CCDs, 2018

Census County Division (CCD)	Total Households	% ALICE Households

Income

Income, as a social determinant of health, is associated with morbidity and mortality. For example, with a higher income are generally able to afford health insurance, obtain timely and quality healthcare services, and take part in routine medical check-ups and adhere to medication regimens. As a result, these individuals tend to have improved health outcomes compared to residents who do not have a stable income. A lack of adequate, stable income can force residents to make choices about what healthcare services they can seek out and how often. Low-income residents also experience other barriers to obtaining adequate and timely care, such as transportation barriers, time barriers, and insurance-related prohibitive factors. Additionally, income inequality is a growing problem across the country, resulting in increased health disparities among populations.¹³ For these reasons, it is critical to consider income factors when analyzing the population in Palm Beach County and the health outcomes of residents.

Per Capita Income and Earnings

As previously mentioned, income can determine an individual's access to health care services. Per capita income measures the amount of income earned per person in a region. The following table shows the per capita income and earnings in Palm Beach County and Florida in 2019. Palm Beach County recorded a higher per capita income (\$39,933), median earnings for workers overall (\$32,308), median earnings for male full-time, year-round workers (\$49,093), and median earnings for female full-time, year-round workers (\$41,982) than the state of Florida in 2019.

Table 40: Per Capita Income and Earnings, Palm Beach County and Florida, 5-Year Estimate, 2019

	Palm Beach County	Florida
Per capita income	\$39,933	\$31,619
Median earnings for workers	\$32,308	\$31,243
Median earnings for male full-time, year-round workers	\$49,093	\$44,724
Median earnings for female full-time, year-round workers	\$41,982	\$38,333

Figure 15: Per Capita Income and Earnings, Palm Beach County and Florida, 2019

Household Income and Benefits

Household income is a socioeconomic indicator for healthcare access and affordability. The table below shows the household income and benefits for Palm Beach County and Florida households in 2019. The percentage of households with earnings in Palm Beach County (70.5%) was slightly lower than the percentage of Florida households with earnings (72.4%). The median household income in Palm Beach County was significantly higher than the state average, at \$99,173 and \$80,343 respectively. The percentage of households that received income from Social Security was higher among Palm Beach County residents (40.4%) compared to state residents (37.4%) as a whole. However, the percentage of households that received income from other benefits, such as retirement (20.2%), Supplemental Security (3.7%), and Food Stamp/SNAP (9.8%) benefits was lower for Palm Beach County residents compared to Florida residents overall. The percentage of households with cash public assistance was the same for both Palm Beach County and Florida (2.1%).

Family Income

Family income is another indicator of socioeconomic status and can help programs and providers understand the community in which they serve. Both income and income inequality are proven to have an effect on health outcomes, especially for those in lower socioeconomic classes. Income and income inequality research among infants has shown that median family income is negatively correlated with birth outcomes.¹⁴

The following table and graph depict family income in Palm Beach County and Florida in 2019. Median family income was higher in Palm Beach County (\$78,370) compared to the state of Florida (\$67,414). Most families in Florida (19.2%) reported a family income of \$50,000 to \$74,999, while most families in Palm Beach County (17.5%) reported an income of \$100,000 to \$149,999.

Table 42: Family Income, Palm Beach County and Florida, 5-Year Estimate, 2019

	Palm Beach County		Florida	
	Count	Percent	Count	Percent
Families	345,298	100%	4,996,650	100%

Figure 16: Family Income, Palm Beach County and Florida, 2019

GINI Index

The GINI Index is a measurement of income distribution throughout the county. Based on the residents' net income, the value will vary between 0 and 1. A value of 0 indicates perfect equality, where there is a proportional distribution of income among the residents. A value of 1 indicates perfect inequality, where one household possesses all of the income and other households do not have an income.

The table below depicts the GINI Index in Palm Beach County, surrounding counties, and the state of Florida in 2019. Palm Beach County reported a GINI Index of 0.5219, which was higher than that of the state of Florida (0.4862) but comparable with the surrounding area counties. This indicates that the state of Florida's income distribution is slightly more equitable than that of Palm Beach County.

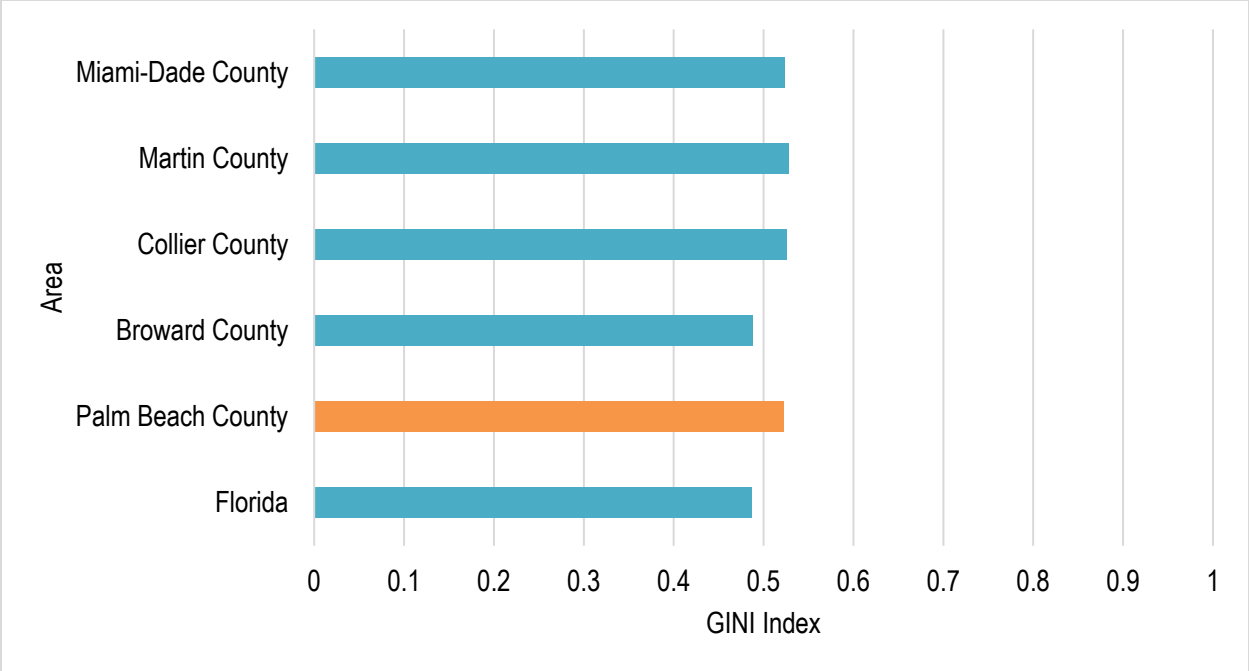

Table 43: GINI Index, Palm Beach County, Florida, and Surrounding Counties, 5-Year Estimate, 2019

Area	GINI Index
Florida	0.4862
Palm Beach County	0.5219
Surrounding Counties:	
Broward County	0.4884
Collier County	0.5257
Martin County	0.5278
Miami-Dade County	0.5231

Figure 17: GINI Index, Palm Beach County, Florida, and Surrounding Counties, 2019

Homelessness

Homelessness is associated with increased rates of morbidity. As such, homeless populations often experience poorer health outcomes due to a lack of routine medical care, neglected chronic conditions, and direct complications as a result of being unsheltered. The Centers for Disease Control and Prevention estimated that while approximately 18% of U.S. adults visited the emergency room over the course of one year (2014), that number more than tripled to over 60% for individuals that did not have stable housing. Lack of insurance and limited access to routine care are factors that contribute to increased emergency department visits. These emergency department encounters can be much more severe and costly than routine medical care, creating a cycle of medical uncertainty and complications for individuals.¹⁵ For these reasons, it is imperative to consider the homeless population in Palm Beach County when working to understand the community's health and the future impacts of intervention and prevention programs in the county.

Homeless Count by Continuum of Care

The chart below depicts homeless counts in Palm Beach County and Florida from 2017 to 2021. It is important to note that the 2020 Point in Time Count numbers are not comparable to the previous years' counts due to COVID-19 safety concerns that affected the annual count of unsheltered homeless individuals. From 2019 to 2020, Palm Beach County saw a rise in homelessness from 6.3% to 7.5%. In this same time period, the state overall was experiencing a decrease in homelessness from -3.9% in 2019 to -4.0% in 2020. At that point, only sheltered individuals were counted, which was not in line with the previous years' counts, which undoubtedly resulted in the missed count of many homeless individuals who did not reside in a shelter.

Table 44: Homeless Count by Continuum of Care, Palm Beach County and Florida, 2017-2021

Year	Palm Beach County		Florida	
	Count	Percent Change	Count	Percent Change
2017	1,607	--	32,109	--
2018	1,309	-22.8%	29,717	-8.0%
2019	1,397	6.3%	28,591	-3.9%
2020	1,510	7.5%	27,487	-4.0%
2021**	458	-229.7%	21,218	-29.5%

Note: **The 2021 Point in Time Count numbers are not comparable to the previous years' counts. Typically, Continuums of Care (CoCs) conduct a PIT Count of both sheltered and unsheltered households. This year, due to COVID-19 related safety concerns, only six of the 27 CoCs conducted such a count; 10 CoCs did not conduct an unsheltered count; and others conducted a modified form of the unsheltered count. All CoCs conducted a sheltered PIT count. For those that did not conduct an unsheltered count, the CoCs reported zero unsheltered persons, resulting in an undercount of homelessness.

Figure 18: Homeless Count by Continuum of Care, Palm Beach County and Florida, 2017-2019

Homeless Students by District

Homeless students face barriers and stressors outside of the school system that may impact their learning, attendance, and school performance. Following the 2016 – 2017 school year, the percentage of homeless students in Palm Beach County decreased from 12.8% in the 2016 – 2017 school year to 0.6% in the 2019 – 2020 school year. The percentage in Florida fluctuated over the same time period, reaching a five-year low in the 2019 – 2020 school year (-14.9%).

Education

Education is vital to the growth and development of residents, and it is well known that there is a positive relationship between education and health.¹⁶

School Enrollment

The experiences that children have in learning programs influence their development and growth.¹⁷ Educational programs and early learning programs are critical to childhood social and emotional development, serving as a catalyst for children to develop skills, relationships, and interests that shape their future. Studies have shown that early learning programs lead to enhanced literacy, language, math, and self-regulation skills. For children who are dual language learners or are from lower income households, positive results were greater when early learning programs were attended.¹⁸ School enrollment is also an indication of population growth and can inform service delivery planning, as schools are often an avenue for health education and service delivery. Thus, understanding school enrollment is useful as agencies plan and implement programs.

The table below shows the count and percent of school enrollment in Palm Beach County and Florida in 2019. In 2019, 324,367 Palm Beach County residents were enrolled in a form of school. Notably, 7.2% of these residents were enrolled in nursery school or preschool, which was higher than the state average of 6.3%. Additionally, 4.6% of students were enrolled in kindergarten, 38.7% of students were enrolled in elementary school (grades 1-8), 21.7% of students were enrolled in high school (grades 9-12), and 27.7% of students were enrolled in college or graduate school in Palm Beach County in 2019.

Table 46: School Enrollment, Palm Beach County and Florida, 5-Year Estimate, 2019

School Enrollment	Palm Beach County		Florida	
	Count	Percent	Count	Percent
Population age 3 years and over enrolled in school	324,367	--	4,758,186	--
Nursery school, preschool	23,287	7.2%	299,316	6.3%
Kindergarten	14,981	4.6%	229,045	4.8%
Elementary school (grades 1-8)	125,619	38.7%	1,873,266	39.4%
High school (grades 9-12)	70,472	21.7%	988,874	20.8%
College or graduate school	90,008	27.7%	1,367,685	28.7%

School Enrollment by Type

The table below shows school enrollment by grade for private and public schools in Palm Beach County and Florida in 2019. Palm Beach County had 325,355 residents aged 3 years and over enrolled in school in 2019. Across most categories, including kindergarten, grades 1 through 4, grades 5 through 8, grades 9 through 12, undergraduate college, and graduate school, more children were enrolled in public schools as compared to private schools. The biggest gap between public and private school enrollment in the county was seen in grades 9 through 12, where 62,913 students were enrolled in public school and 9,909 students were enrolled in private school with a difference of 53,004 students. In regards to nursery school and preschool, more students were enrolled in private school (12,550) than public school (10,407) in Palm Beach County. It is important to note that these rates were calculated using one-year estimates from the U.S. Census Bureau's American Community Survey, as opposed to the fuller five-year estimates that are used throughout the rest of this report

Table 47: School Enrollment by Type, Palm Beach County and Florida, 1-Year Estimate, 2019

School Enrollment	Palm Beach County	Florida
Total Population Age 3 Years and Over	1,453,797	20,825,863
Enrolled in school	325,355	4,795,224
Enrolled in nursery school, preschool:	22,957	314,700
Public school	10,407	171,096
Private school	12,550	143,604
Enrolled in kindergarten:	14,166	221,192
Public school	12,068	187,469
Private school	2,098	33,723
Enrolled in grade 1 to grade 4:	61,269	912,157
Public school	54,860	785,649
Private school	6,409	126,508
Enrolled in grade 5 to grade 8:	66,608	1,006,115
Public school	56,358	862,880
Private school	10,250	143,235
Enrolled in grade 9 to grade 12:	71,922	993,773
Public school	62,013	875,867
Private school	9,909	117,906
Enrolled in college undergraduate years:	70,775	1,092,451
Public school	57,766	875,849
Private school	13,009	216,602
Enrolled in graduate or professional school:	17,658	254,836
Public school	10,175	154,535
Private school	7,483	100,301
Not enrolled in school	1,128,442	16,030,639

Educational Attainment

Research shows that there is a positive link between education, improved health, and life expectancy. Health disparities exist between those who have higher education and those with less education. This may be because education can typically lead to stable employment, higher pay and benefits, and employer-provided health insurance, which are associated with an increased access to care.¹⁹

The following table depicts the educational attainment of residents in Palm Beach County and Florida in 2019. Among the Palm Beach County population that was age 25 years or older in 2019, 88.5% obtained a high school diploma or higher, which was comparable to the state's percentage of 88.2%. Additionally, a higher percentage of residents age 25 years or over obtained a Bachelor's degree or higher in Palm Beach County (36.7%) compared to the state (29.9%).

Table 48: Educational Attainment, Palm Beach County and Florida, 5-Year Estimate, 2019

	Palm Beach County		Florida	
	Count	Percent	Count	Percent
Population Age 25 years and over	1,071,994	100%	14,965,745	100%
Less than 9th grade	61,660	5.8%	718,909	4.8%
9th to 12th grade, no diploma	61,734	5.8%	1,048,674	7.0%
High school graduate (includes equivalency)	257,316	24.0%	4,276,237	28.6%
Some college, no degree	201,641	18.8%	2,981,480	19.9%
Associate's degree	96,303	9.0%	1,468,744	9.8%
Bachelor's degree	242,569	22.6%	2,827,938	18.9%
Graduate or professional degree	150,771	14.1%	1,643,763	11.0%
High school graduate or higher	948,600	88.5%	13,198,162	88.2%
Bachelor's degree or higher	393,340	36.7%	4,471,701	29.9%

Figure 20: Educational Attainment, Palm Beach County and Florida, 5-Year Estimate, 2019

The table below shows educational attainment by race and ethnicity in Palm Beach County and Florida in 2019. When examining education attainment across races in Palm Beach County, most notably, more White residents (91.1%) obtained a high school degree or higher than Black residents (79.7%). When comparing the attainment of a Bachelor's degrees or higher among these populations, the percentage of Black residents ((20.7%) to do so was nearly half that of White residents (40.2%).

Educational attainment across ethnicities is also depicted. In 2019, 95.4% of White, non-Hispanic residents obtained a high school degree or higher compared to 74.2% of Hispanic or Latino residents in Palm Beach County. Furthermore, while 44.3% of White, non-Hispanic Palm Beach County residents obtained a Bachelor's degree or higher, only 24.6% of Hispanic and Latino residents did so as well. These disparities in educational attainment in certain races and ethnicities are similar across the state.

High School Graduation Rates

The National Bureau of Economic Research refers to high school graduation rates as a “barometer” of health. Research shows that high school graduation rates can be an indicator of health and societal progress in a community.²⁰

The table below shows the high school graduation rates in Palm Beach County and Florida from the 2016 – 2017 school year through the 2019 – 2020 school year. Overall, graduation rates increased from the 2016 – 2017 school year to the 2019 – 2020 school year in Palm Beach County and Florida, with Palm Beach County increasing from 85.0% to 90.2% and Florida increasing from 82.3% to 90.0% during this time frame.

The Healthy People 2030 national target is to increase the proportion of high school students who graduate in four years after starting ninth grade to 90.7%. The most recent national data shows that 85.8% of students graduated with a regular diploma in the 2018 – 2019 school year four years after starting ninth grade.²¹ While the Florida and Palm Beach County rates below do not specify graduation within four years of starting ninth grade, the data does show that Palm Beach County is close to reaching the target graduation rate, with a rate of 90.2% in the 2019 – 2020 school year.

Table 50: High School Graduation Rates, Palm Beach County and Florida, School Years 2016-2017 Through 2019-2020

	2016-2017	2017-2018	2018-2019	2019-2020
Palm Beach County	85.0%	87.2%	87.1%	90.2%
Florida	82.3%	86.1%	86.9%	90.0%

School Grades by Year

School grades are an indicator of individual school performance throughout the county. These grades are assigned by the Florida Department of Education and serve as a way for the Department to communicate how well each school is serving its students. It is important to note that on March 23, 2020, the Florida Department of Education Emergency Order No. 2020-EO-1 was issued in response to the COVID-19 pandemic and subsequently cancelled all spring K-12 statewide assessment tests. As such, accountability measures for the 2019 – 2020 school year that used statewide assessment data were not fully calculated. Additionally, on April 9, 2021, the Florida Department of Education Emergency Order No. 2021-EO-02 made the 2020 – 2021 school year school grades optional and gave schools the ability to choose to opt-in to this measure.²²

The chart below depicts the school grades received by Palm Beach County schools by academic year from the 2014 – 2015 school year to the 2019 – 2020 school year. A full list of grades by school is included in Appendix A. Overall, school grades improved in Palm Beach County, reaching a five-year high in the count of “A” grades (44.9%) obtained by Palm Beach County schools and a five-year low in the count of “F” grades (0.0%) obtained in the 2018 – 2019 school year.

Table 51: School Grades by Year (Average), Palm Beach County, 2014-2015 School Year Through 2018-2019 School Year

School Grade	2014 – 2015		2015 – 2016		2016 – 2017		2017 – 2018		2018 – 2019	
	Count	Percent	Count	Percent	Count	Percent	Count	Percent	Count	Percent
A	86	43.4%	63	31.8%	72	36.4%	83	41.9%	89	44.9%
B	22	11.1%	45	22.7%	45	22.7%	42	21.2%	45	22.7%
C	51	25.8%	67	33.8%	67	33.8%	63	31.8%	58	29.3%
D	22	11.1%	12	6.1%	8	4.0%	5	2.5%	3	1.5%
F	8	4.0%	3	1.5%	1	0.5%	1	0.5%	0	0.0%
No Grade	9	4.5%	8	4.0%	5	2.5%	4	2.0%	3	1.5%

*Note: Pursuant to FDOE Emergency Order No. 2021-EO-02, only schools for which an opt in request was submitted by the school district superintendent or charter school governing board have a letter grade assigned for the 2020-21 school year. More information can be found at <https://www.fldoe.org/core/fileparse.php/19861/urlt/2021-EO-02.pdf>.

Percentage of Total Students Passing, Score Of 3 and Above

Student pass rates are an indicator of student performance and can depict both English Language Arts and Mathematics aptitude.

The table below shows the percentage of total students passing with a score of three and above in Palm Beach County and Florida from the 2017 – 2018 through the 2020 – 2021 school years. In both English Language Arts and Mathematics, Palm Beach County's percentage exceeded the state's overall percentage each year from the 2017 – 2018 school year through the 2020 – 2021 school year. It is important to note that, in the 2019 – 2020 school year, Spring K-12 statewide assessments were canceled by Executive Order No. 2020-EO-1 due to the COVID-19 pandemic. As a result, school accountability measures were not calculated for the 2019 – 2020 school year.

Table 52: Percentage of Total Students Passing, Score of 3 and Above, Palm Beach County and Florida, School Years 2017-2018 Through 2020-2021

School Year	Palm Beach County	Florida	Palm Beach County	Florida
	English Language Arts Achievement Levels 3+		Mathematics Achievement Levels 3+	
2017-2018	58.2%	55.9%	62.0%	59.0%
2018-2019	58.9%	57.0%	63.4%	59.6%
2019-2020	--*	--*	--*	--*
2020-2021	54.2%	52.8%	47.0%	48.4%

Note: *Pursuant to Florida Department of Education Emergency Order No. 2020-EO-1, spring K-12 statewide assessment test administrations for the 2019-20 school year were canceled and accountability measures reliant on such data were not calculated for the 2019-20 school year. Additionally, in April 2020, the U.S. Department of Education provided a Report Card waiver for requirements related to certain assessments and accountability that are based on data from the 2019-20 school year.

Business and Employment

Employment can lead to positive outcomes such as a stable income and access to employer benefits, including health insurance. Research has shown that well-paying jobs play an important role in an individual's ability to live in a safe neighborhood, obtain education for their children, secure childcare services, and purchase healthy foods. Compared to their employed counterparts, unemployed Americans are more likely to be diagnosed with depression and have poorer health outcomes, including an increased risk of developing a stress-related condition such as stroke, heart attack, heart disease, or arthritis.²³ Employment plays a significant role in health, and therefore it is important to explore the employment status and employee characteristics of a community to better understand the population.

Employment Status

Employment rate is positively correlated with both individual and community health. Research shows that mortality rates and rates of chronic diseases are lower among employed individuals compared to unemployed individuals. Quality, stable employment is known to reduce the risk of depression and psychological stress and improve overall mental health.²⁴

The table below shows the employment status for Palm Beach County and Florida residents in 2019. Among the Palm Beach County population ages 16 years and older, 59.7% of residents were in the civilian labor force. Of those residents, 56.2% were employed and 3.5% were unemployed. This is comparable to the state rate, where 55.2% of the Florida population in the civilian labor force was employed and 3.3% were unemployed. Overall, Palm Beach County had an unemployment rate of 5.9% in 2019, which was slightly above the state rate of 5.6%.

Table 53: Employment Status, Palm Beach County and Florida, 5-year Estimate, 2019

Figure 24: Employment Status, Palm Beach County and Florida, 2019

Unemployment Rate

Unemployment has adverse health consequences and can lead to lost wages and medical benefits, which ultimately can result in decreased access to care for individuals and their families. Additionally, unemployment is shown to lead to increased feelings of depression, anxiety, low self-esteem, demoralization, worry, and physical pain. Compared to their employed counterparts, unemployed residents tend to suffer from more stress-related illnesses, including high blood pressure, stroke, heart attack, heart disease, and arthritis.²⁵ For these reasons, it is important to analyze unemployment as an indicator to health.

The table below depicts the unemployment rate in Palm Beach County and Florida from 2015 to 2019. It is important to note that these rates were calculated using one-year estimates from the U.S. Census Bureau's American Community Survey, as opposed to the fuller five-year estimates that are used throughout the rest of this report. Overall, both Palm Beach County and the state of Florida unemployment rates gradually declined from 2015 to 2019. As of 2019, Palm Beach County had an unemployment rate of 5.2%, while the state had a rate of 4.5%.

Table 54: Unemployment Rate, Palm Beach County and Florida, 1-Year Estimate, 2019

Year	Palm Beach County	Florida
2015	6.9%	7.0%
2016	6.3%	6.0%
2017	5.9%	5.5%
2018	5.6%	5.2%

Figure 25: Unemployment Rate, Palm Beach County and Florida, 1-Year Estimate, 2019

Employment by Industry

Understanding residents' employment based on their industry can help public health agencies better anticipate the needs, services, and lifestyles of residents. Industry sectors determine a worker's potential health risks, working hours, and economic situation. All of these elements are important in planning and implementing health services. According to labor studies, jobs that are categorized as "blue-collar" often report increased physical demands and low flexibility of work hours. These characteristics are more frequently reported among lower socioeconomic classes. Alternatively, "white-collar" jobs are more likely to report high time pressure, frequent overtime, and poor work-life balance. These characteristics are positively related to social status and are more common among higher socioeconomic classes. Additionally, evidence suggests that morbidity and mortality increase as social or socioeconomic status decrease. Despite this, it is important to note that social support at work and job security are not clearly related to occupational class or to socioeconomic or educational status.²⁶

The chart below depicts employment by industry for both Palm Beach County and Florida in 2019. Among Palm Beach County civilian workers ages 16 years and older, a majority worked in educational services, health care, and social assistance (20.9%) industries. Professional, scientific, management, administrative, and waste management services (15.5%) industries made up the second most populous group. The industry with the smallest percentage of the civilian population working was agriculture, forestry, fishing and hunting, and mining (1.0%). These trends were consistent with those reported across the state of Florida.

Figure 26: Employment by Industry, Palm Beach County and Florida, 5-Year Estimate, 2019

Industry	Palm Beach County		Florida	
	Count	Percent	Count	Percent
Civilian employed population 16 years and over	684,112	100%	9,495,353	100%

Employment by Occupation

Similar to employment by industry, employment data based on occupation can help providers and community organizations better understand resident lifestyles and health needs. Studies show that workers with lower educational and occupational status are more likely to report poor self-rated health, limited physical functioning, and sickness absence.²⁷

The following table shows occupation categories for Palm Beach County and Florida residents in 2019. These categories have different risks associated with their work and are important to consider when analyzing the health status and potential needs of the community. Palm Beach County civilian workers ages 16 years and older worked primarily in three occupational sectors: management, business, science, and arts occupations (37.3%); sales and office occupations (23.5%); and service occupations (21.8%).

Figure 27: Employment by Occupation, Palm Beach County and Florida, 5-Year Estimate, 2019

Occupation	Palm Beach County		Florida	
	Count	Percent	Count	Percent
Civilian employed population 16 years and over	684,112	100%	9,495,353	100%
Management, business, science, and arts occupations	255,373	37.3%	3,377,159	35.6%
Service occupations	149,365	21.8%	1,897,257	20.0%

Employment by Class of Worker

The table below shows the percentage of the working population in each class, including private wage and salary workers, government workers, self-employed workers, and unpaid family workers, in Palm Beach County and Florida in 2019. Of the Palm Beach County workforce, 83.1% were private wage and salary workers, which was consistent with the state's percentage of 82.4%. Government workers made up 10.1% of the Palm Beach County workforce, while self-employed workers made up 6.6% and unpaid family workers made up 0.2% of the workforce.

Figure 28: Employment by Class of Worker, Palm Beach County and Florida, 5-Year Estimate, 2019

Class of Worker	Palm Beach County		Florida	
	Count	Percent	Count	Percent
Civilian employed population 16 years and over	684,112	100%	9,495,353	100%

Public Assistance Benefits

Public assistance benefits serve as a valuable resource for community members in need. This section explores Free and Reduced Lunch at schools and the Older American Act in Palm Beach County.

Free and Reduced Lunch Status

Nutrition is a vital component to a child's well-being and their ability to learn in the classroom. School lunches offer an opportunity for children to receive nutritious, filling foods that follow the standards from the National School Lunch Program. These free and reduced-price lunches are shown to reduce food insecurity, obesity rates, and poor health among students.²⁸

The following table shows the count of free and reduced-price lunch eligible students in Palm Beach County and Florida during the 2020 – 2021 school year. During this timeframe, Palm Beach County had approximately 187,341 students. Of those students, 65.1% were eligible for free or reduced lunch or attended a Provision 2 school. This is slightly greater than the percentage in Florida, where 63.7% of students were eligible for free or reduced lunch or attended a Provision 2 school.

Table 55: Free and Reduced Lunch Status, Palm Beach County and Florida, School Year 2020 – 2021

	Total Students	Percent Eligible	# of Free Lunch Students	# of Reduced-Price Lunch Students	# of Provision 2 Students	# of Direct Certification CEP Students
Florida	2,795,691	63.7%	967,002	106,611	939	472,872
Palm Beach County	187,341	65.1%	110,872	10,793	350	0

Notes: Free = The student is eligible for free lunch; Reduced = The student is eligible for reduced price lunch; Provision 2 = The student is enrolled in a USDA-approved Provision 2 school; Direct Cert = The student is enrolled in a USDA-approved Community Eligibility Provision (CEP) school and is identified as eligible for free meals based upon the Direct Certification Determination or the extension of eligibility to the household due to eligibility of an identified direct certified student.

Students Qualifying for Free and Reduced Lunch, By School

When analyzed by school, free and reduced lunch qualifications can indicate need in a particular area. The following table depicts free and reduced lunch statuses for all Palm Beach County School District schools during the 2020 – 2021 school year. Please note that the full listing of schools is included in Appendix B. Among all Palm Beach County School District schools, 65.1% of students were eligible for free and reduced lunch or attended a Provision 2 school.

Table 56: Students Qualifying for Free and Reduced Lunch, By School, Palm Beach County, School Year 2020 - 2021

	Total Students	Percent Eligible	# of Free Lunch Students	# of Reduced-Price Lunch Students	# of Provision 2 Students	# of Direct Certification CEP Students
All Palm Beach County Schools	187,341	65.1%	110,872	10,793	350	0

Note: *To provide meaningful results and to protect the privacy of individual students, data are displayed only when the total number of students in a group is at least 10 and when the performance of individuals would not be disclosed. Data for groups less than 10 are displayed with an asterisk (*).

SNAP Participation, September 2021

Overall, food insecurity has been shown to increase the risk of adverse health outcomes and is linked with higher health care costs. Food insecurity can also complicate an individual's ability to manage illness, furthering health issues. Research shows that food insecurity is strongly correlated with chronic health conditions among children, working-age adults, and seniors. Additionally, the United States' anti-hunger program, the Supplemental Nutrition Assistance Program (SNAP), has been shown to improve health outcomes and lower healthcare costs for participants. SNAP works to improve food security and offers benefits that enable families to purchase healthier foods while saving money that can be used towards other health-promoting activities and medical care. SNAP participants are more likely to report excellent or very good health as compared to low-income non-SNAP participants.²⁹

The table below depicts SNAP participation by ZIP code among age groups in Palm Beach County as of September 2021. Notably, over 50% of the population in ZIP codes 33407, 33438, and 33476 received SNAP benefits in September 2019. The ZIP code with the highest percentage of the population receiving SNAP in September 2019 was in Canal Point (56.7%).

Figure 29: SNAP Participation, Palm Beach County, September 2021

ZIP Code		Population Estimate*	Age 17 & Under Receiving SNAP	Age 18-59 Receiving SNAP	Age 60 & Above Receiving SNAP	Total SNAP Recipients	Percentage of the Population SNAP

Older Americans Act, Meals Clients

The Older Americans Act was initially passed by the United States Congress in 1965 to address concerns about inadequate social services for the elderly population. Today, the Older Americans Act authorizes a large scope of social and nutritional services for elderly individuals and their caregivers.³⁰

The table below displays the number of Older Americans Act meal clients in Palm Beach County from 2016 to 2020. In 2020, there were 450,876 meals clients ages 60 and above and 3,097 active congregate meals clients. In addition to these congregate meal clients, there were 3,125 active home delivered meals clients. The total number of clients ages 60 and above and home delivered meals clients reached a five-year high in 2020.

Table 57: Older Americans Act, Meals Clients, Palm Beach County, 2016-2020

Year	60+ Population	Congregate Meals Clients Active During the Year	Home Delivered Meals Clients Active During the Year	Congregate and Home Delivered Meals Active Clients as a % of 60+ Population	Number of Clients on the Home Delivered Meals Waitlist During the Year	Clients on the Home Delivered Meals Waitlist as a % of 60+ Population
2016	413,821	3,000	927	0.94%	1,975	0.48%
2017	423,350	2,737	926	0.85%	2,229	0.53%
2018	432,939	2,975	843	0.87%	2,677	0.62%
2019	440,427	3,152	749	0.87%	2,616	0.59%
2020	450,876	3,097	3,215	1.13%	2,959	0.66%

Notes: The significant increase in the percentage of 60+ population served home-delivered meals in 2020 was due to one-time funding for meals from the Family First Act and Coronavirus Aid, Relief and Economic Security (CARES) Act designated to respond to the coronavirus.

Housing

Housing that is stable, affordable, safe, and well-maintained is critical for health and community development. Research shows that community-wide efforts to stabilize housing have improved health outcomes and decreased health care costs for residents. As a social determinant of health, housing is an important component in understanding a community's current health outlook and planning future efforts to improve the health and well-being of the community.³¹

Housing Occupancy

Vacant housing units can lead to negative consequences in the physical environment of a community. The table below depicts the housing occupancy and vacancy rates in Palm Beach County and Florida in 2019. During this year, 80.7% of housing units in Palm Beach County were occupied, while 19.3% of units were vacant. Rental units (8.2) experienced a higher vacancy rate as compared to homeowner units (1.9). The state of Florida saw similar trends, including 81.9% of all units classified as occupied and 18.1% as vacant in 2019

Table 58: Housing Occupancy, Palm Beach County and Florida, 5-Year Estimate, 2019

	Palm Beach County		Florida	
	Count	Percent	Count	Percent
Total housing units	686,410	100%	9,448,159	100%

Housing Tenure

Research has shown that renting a home may heighten the association between unaffordable housing and self-rated health as compared to owning a home. Studies suggest that those who rent homes are more likely to report poor self-rated health compared to those who own their home. Programs that target housing affordability for these populations can have a subsequent positive impact on health. This is significant for programs to consider as they target specific populations in their outreach.³² As depicted in the table below, a majority of housing units in both Palm Beach County (68.9%) and the state of Florida (65.4%) were owner-occupied in 2019. However, nearly one-third of units in Palm Beach County (31.1%) and Florida (34.6%) were renter-occupied.

Table 59: Housing Tenure, Palm Beach County and Florida, 5-Year Estimate, 2019

	Palm Beach County		Florida	
	Count	Percent	Count	Percent
Occupied housing units	554,095	100%	7,736,311	100%
Owner-occupied	381,611	68.9%	5,058,841	65.4%
Renter-occupied	172,484	31.1%	2,677,470	34.6%

Housing Value, Owner-Occupied Units

Housing value is an important indication of the cost of living and economic stability of a community. The table below shows the housing value of owner-occupied units in Palm Beach County and Florida in 2019. Among all owner-occupied housing units in Palm Beach County, the median value of housing units was approximately \$283,600 in 2019. That is higher than the state's median housing value of \$215,300.

Table 60: Housing Value, Owner-Occupied Units, Palm Beach County and Florida, 5-Year Estimate, 2019

	Palm Beach County		Florida	
	Count	Percent	Count	Percent
Owner-occupied units	381,611	100%	5,058,841	100%
Less than \$50,000	17,648	4.6%	361,140	7.1%
\$50,000 to \$99,999	30,212	7.9%	573,883	11.3%

Gross Rent

Average rent is another indicator of the economic status of a community. When residents face disproportionate rent costs compared to their income, they face economic challenges in seeking medical or health care. For this reason, average rent is an important consideration in understanding the health status of the county.

This table shows the gross rent in Palm Beach County and Florida in 2019. In Palm Beach County, there were approximately 165,753 occupied units paying rent in 2019. The median rent cost was \$1,398. That is slightly higher than the state's median rent cost of \$1,175.

Table 61: Gross Rent, Palm Beach County and Florida, 5-Year Estimate, 2019

	Palm Beach County		Florida	
	Count	Percent	Count	Percent
Occupied units paying rent	165,753	100%	2,564,288	100%
Less than \$500	6,235	3.8%	135,487	5.3%
\$500 to \$999	27,730	16.7%	744,139	29.0%

Gross Rent as a Percentage of Household Income (GRAPHI)

Gross Rent as a Percentage of Household Income (GRAPHI) is a measure that describes the percent of household income that is allocated to rent payments.³³ The U.S. Department of Housing and Urban Development defines cost-burdened families as those who pay more than 30% of their income on housing. These residents may be living near poverty with challenges affording necessities such as food, transportation, and medical care.³⁴

The table below shows GRAPHI in Palm Beach County and Florida in 2019. Overall, 59.3% of Palm Beach County units paying rent in 2019 had a GRAPHI of over 30% compared to the state's percent of 56.3%.

The Healthy People 2030 national target is to reduce the proportion of families that spend more than 30% of income on housing to 25.5%.³⁵ It is important to note that while the Healthy People 2030 target focuses on income spent towards housing in general in the United States, the U.S. Census data available for Palm Beach County and Florida specifically captures income towards rent. Therefore, the information below reflects a smaller subset of the Healthy People 2030 national target topic. According to the data provided below, 59.3% of occupied Palm Beach County units paying rent spent over 30% of their income on housing. In Florida, 56.3% of occupied units paying rent spent over 30% of their household income on housing in 2019.

Table 62: Gross Rent as a Percentage of Income (GRAPHI), Palm Beach County and Florida, 5-Year Estimate, 2019

Gross Rent as a Percentage of Household Income (GRAPHI)	Palm Beach County		Florida	
	Count	Percent	Count	Percent
Occupied units paying rent (excluding units where GRAPHI cannot be computed)	162,732	100%	2,496,946	100%
Less than 15.0 percent	14,204	8.7%	221,551	8.9%
15.0 to 19.9 percent	15,767	9.7%	268,009	10.7%
20.0 to 24.9 percent	17,965	11.0%	310,531	12.4%
25.0 to 29.9 percent	18,408	11.3%	291,370	11.7%
30.0 to 34.9 percent	15,261	9.4%	239,801	9.6%
35.0 percent or more	81,127	49.9%	1,165,684	46.7%

Eviction Rates

Research indicates an association between evictions and negative health impacts, including birth outcomes, mental health hospitalizations, and all-cause mortality. Women, people of color, and families with children are at a higher risk for eviction compared to other groups.³⁶

This table shows the eviction rates in Palm Beach County and Florida in 2016. Eviction rates in Palm Beach County (2.8%) exceeded those of the state of Florida (2.53%) in 2016. Additionally, there were approximately 14.56 evictions per day in Palm Beach County in 2016.

Households and Householders Living Alone

Social isolation can have a significant impact on health. Loneliness is associated with higher rates of depression, anxiety and suicide. Additionally, social isolation can increase an individual's risk of premature death from all causes and is associated with a 50% increased risk of dementia. Older adults are at an increased risk for this isolation as they are more likely to live alone compared to other age groups.³⁷

The table below depicts households and householders living alone in Palm Beach County and Florida in 2019. Non-family households in which the householder lives alone made up nearly one-third (31.0%) of all households in Palm Beach County in 2019. This is higher than the state average, where 28.6% of householders lived alone. Among those ages 65 years and older, 16.8% lived alone in Palm Beach County compared to 12.9% across the state.

Table 64: Households and Householders Living Alone, Palm Beach County and Florida, 5-Year Estimate, 2019

	Palm Beach County		Florida

Transportation

Transportation is frequently cited as a barrier to accessing healthcare. When transportation barriers occur, residents may miss appointments or delay care because they do not have the ability to physically attend an appointment or pick up medications. Residents who are not able to access needed transportation, and thus are not able to seek timely care, experience poorer health outcomes.³⁸ With the increased implementation of telehealth services in recent years, the association between transportation and access to care may weaken.

The following charts depict the outlook of transportation in Palm Beach County, as reported in the 2019 U.S. Census Bureau data. Vehicles available by household and workers who commute to work using public transit are important indicators in understanding the current status of transportation in Palm Beach County, and will be vital to increasing access to healthcare services and ultimately improving health outcomes in future efforts.

Vehicles Available by Household

Vehicles available by household can give providers and program managers insight into a resident's transportation options. This can help policymakers understand the challenges that residents face in accessing services.

The table below shows the vehicles available by household in Palm Beach County and Florida in 2019. In Palm Beach County, a majority of households reported having a vehicle available (41.3%). Alternatively, 6.1% of households did not have a vehicle available. This is comparable to the state of Florida, where 6.3% of households did not have a vehicle.

Table 65: Vehicles Available by Household, Palm Beach County and Florida, 5-Year Estimate, 2019

Vehicles Available	Palm Beach County		Florida	
	Count	Percent	Count	Percent
Occupied housing units	554,095	100%	7,736,311	100%
No vehicles available	33,701	6.1%	489,240	6.3%
1 vehicle available	228,678	41.3%	3,070,576	39.7%
2 vehicles available	214,812	38.8%	2,968,077	38.4%
3 or more vehicles available	76,904	13.9%	1,208,418	15.6%

Workers Who Commute to Work Using Public Transit, By Age

Well-designed and well-used public transportation systems can improve the health of communities by offering low-cost transportation options that reduce automobile congestion and the associated environmental impacts and health impacts. Public transportation systems offer solutions to families who face transportation barriers, which is one of the major issues related to access to health care. Public transportation also offers accessibility options for the elderly, disabled, and young adults. However, ill-maintained systems may result in low ridership due to the inconvenience of routes or bus stops, inconvenient timing options, or a lack of accessibility, especially for those with disabilities.³⁹

The following table shows the number and percentage of workers who commuted to work using public transit by age in Palm Beach County and Florida in 2019. The commute types depicted below can give insight into how Palm Beach County residents get to work, appointments, and other community activities. In Palm Beach County, most workers ages 16 years and older commuted by driving alone in a car, truck, or van (77.9%). Alternatively, 10,967 workers (1.6%) ages 16 years and older commute to work using public transportation, not including a taxi cab. Public transportation use was highest among workers ages 25 to 44 years old (42.6%) and lowest among workers ages 16 to 19 years old (4.0%) in Palm Beach County. The state of Florida showed a similar trend with 4.5 % of commuters ages 16 to 19 years old commuting via public transportation and 41.4% of residents ages 25 to 44 years old commuting via public transportation.

Workers Who Commute to Work Using Public Transit, By Race and Ethnicity

The table and graphs below show the number and percentage of workers who commuted to work using public transportation by race and ethnicity in Palm Beach County and Florida in 2019. The percentage of those using public transportation is fairly equal among White (45.3%) and Black (45.3%) residents, as well as between Hispanic (27.2%) and non-Hispanic (24.6%) residents in Palm Beach County. Among White workers over the age of 16 years old, 45.3% commuted via public transportation compared to 45.3% of Black workers in the same age group. Hispanic or Latino workers over the age of 16 years old (27.2%) reported slightly higher rates of public transportation commuting compared to their White counterparts (24.6%). The distribution between races and ethnicities in Palm Beach County was more equitable than the distribution seen across the state of Florida. In Florida, 36.7% of Hispanic or Latino workers over the age of 16 commuted via public transportation as compared to 19.6% of non-Hispanic or Latino workers.

Crime

According to the Centers for Disease Control and Prevention, violence is now widely recognized as a public health issue.⁴⁰ Whether an individual is a direct victim, witness, or is exposed to conversation about crime, the negative effects can have a physical, mental, and emotional impact. Exposure to violence in childhood can lead to a greater risk for substance abuse, risky sexual behavior, and unsafe driving behavior in adulthood. Additionally, if people feel unsafe in their community due to crime and violence, they will be less likely to engage in outdoor physical activity or wellness activities, decreasing positive physical health outcomes and the sense of community within an area. Addressing exposure to crime and violence through a public health lens is important in mitigating the negative effects from such exposure.⁴¹

Total Arrests

Total arrests serve as one indicator of crime in a community. The following table depicts total arrests in Palm Beach County in 2018 and 2019. The number of total arrests for both adults and juveniles in Palm Beach County decreased from 2018 to 2019. In 2019, there were 37,272 adult arrests, compared to 40,049 in 2018, and 3,220 juvenile arrests, compared to 3,695 in 2018.

Table 68: Total Arrests, Palm Beach County, 2018 and 2019

Year	Population	Total Arrests	Arrest Rate per 100,000	Total Adult Arrests	Total Juvenile Arrests
2018	1,433,417	43,744	3,051.7	40,049	3,695

Arrests by Charge, Index Arrests

The table below shows the type of Index Arrests made in Palm Beach County in 2019. Understanding the reasons for an arrest can aid community partners in preparing services based on those reasons. Most Palm Beach County Index Arrests in 2019 were due to larceny (4,250 arrests) and aggravated assault (1,640 arrests).

COVID-19 Pandemic

COVID-19 Daily New Cases per 100,000 Population

The following table and figure show the rate of daily new COVID-19 cases per 100,000 population in Palm Beach County and Florida in 2020 and 2021. Both Palm Beach County and Florida followed similar trends throughout this timeframe. The rate among Palm Beach County residents peaked in August 2020, February 2021, and September 2021. The highest rate of new cases of COVID-19 in Palm Beach County of 82.2 per 100,000 occurred in September 2021.

There is no Healthy People 2030 national target specific to this health indicator.

Age-Adjusted Deaths from COVID-19, By Race

The table and figure below show the age-adjusted death rate per 100,000 population from COVID-19 in Palm Beach County and Florida in 2020 by race. In Palm Beach County and Florida, the rate among Black residents was over double the rate among White residents. The rate among Black residents in Palm Beach County was 123.2 per 100,000, while the rate among White residents was 48.4 per 100,000. Additionally, the rate among Black residents in Palm Beach County (123.2 per 100,000) was higher than the rate among Black residents in Florida (106.0 per 100,000) overall.

Vaccinations

COVID-19 Vaccinations

The table and figure below show the percentage of the total population vaccinated for COVID-19 in Palm Beach County and Florida in 2021 and 2022. The rate of fully vaccinated residents in Palm Beach County and Florida followed a similar trend during this timeframe, with the percentage among Palm Beach County residents slightly higher than the percentage among Florida residents overall each month reported. The percentage of residents in Palm Beach County with one dose was slightly higher than the rate among fully vaccinated residents each month during this timeframe, as well.

There is no Healthy People 2030 national target specific to this health indicator.

Table 75: COVID-19 Vaccinations, Percent of the Population, Palm Beach County and Florida, 2021

Maternal and Child Health

Prenatal Care

Births to Mothers with First Trimester Prenatal Care

Early prenatal care provides benefits to both mothers and their babies.⁴³ Receiving care during the first trimester, defined as the first 12 weeks of pregnancy, is especially crucial.⁴⁴ Receiving early medical attention can ensure that any medical conditions or potential complications are detected and addressed before they arise or worsen.⁴⁵

This table below shows the percentage of births to mothers with first trimester prenatal care in Palm Beach County and Florida from 2015 to 2019. Between 2015 and 2019, the percentage of births to mothers receiving first trimester prenatal care decreased at both the state and county level. In Palm Beach County, the percentage dropped from 76.3% in 2015 to 73.3% in 2019.

The Healthy People 2030 national target is to increase the proportion of women who receive early and adequate prenatal care to 80.5%.⁴⁶ Nationally, as of 2019, only 76.7% of women reported receiving such care. In Palm Beach County, 73.3% of women received early and adequate prenatal care in 2019.

Table 76: Births to Mothers with First Trimester Prenatal Care, Palm Beach County and Florida, 2015-2019

Year	Palm Beach County		Florida	
	Count	Rate	Count	Rate
2015	10,336	76.3	161,643	79.3
2016	10,088	75.8	157,084	78.4

Births to Mothers with First Trimester Prenatal Care, By Race

The racial and ethnic disparities that persist regarding access to prenatal care have implications for maternal health outcomes, underscoring the importance of early prenatal care.⁴⁷

The table and graph below show the percentage of births to mothers with first trimester prenatal care by race in Palm Beach County and Florida from 2015 to 2019. Racial disparities in the percentage of births to mothers with first trimester prenatal care were found in both Palm Beach County and Florida during this time frame. Across all years, White mothers were more likely to receive first trimester prenatal care than Black mothers in Palm Beach County and Florida. In 2019, the gap between White and Black mothers in Palm Beach County was 8.4%, with 75.6% of White mothers and 67.2% of Black mothers receiving first trimester care.

Healthy People 2030 has not identified a national target for first trimester prenatal care by race.

Table 77: Births to Mothers with First Trimester Prenatal Care, By Race, Palm Beach County and Florida, 2015-2019

Year	Palm Beach County		Florida	
	White	Black	White	Black
2015	78.8	70.6	81.3	72.8
2016	78.1	69.8	80.7	71.4
2017	77.8	66.8	79.7	69.7
2018	75.3	65.9	78.6	69.6

Figure 40: Births to Mothers with First Trimester Prenatal Care, By Race, Palm Beach County and Florida, 2015-2019

Births to Mothers with First Trimester Prenatal Care, By Ethnicity

This table and graph below show the births to mothers with first trimester prenatal care by ethnicity in Palm Beach County and Florida from 2015 to 2019. In Florida, Hispanic mothers were found to be slightly more likely to have received first trimester prenatal care than Non-Hispanic mothers. In Palm Beach County, however, Hispanic mothers were much less likely to receive first trimester prenatal care than Non-Hispanic mothers across all years. In 2019, the gap between Hispanic and Non-Hispanic mothers in Palm Beach County receiving early prenatal care was 10.0%, which reflected a similar 10.0% gap in 2015. Across all years, the percentage of mothers in Palm Beach County who received first trimester prenatal care remained below the Florida average.

Healthy People 2030 has not identified a national target for first trimester prenatal care by ethnicity.

Table 78: Births to Mothers with First Trimester Prenatal Care, By Ethnicity, Palm Beach County and Florida, 2015-2019

Year	Palm Beach County		Florida	
	Hispanic	Non-Hispanic	Hispanic	Non-Hispanic
2015	69.4	79.4	79.7	79.1
2016	68.8	79.1	78.7	78.3
2017	69.4	77.5	77.8	77.0
2018	67.0	75.5	76.5	76.3

Figure 41: Births to Mothers with First Trimester Prenatal Care, By Ethnicity, Palm Beach County and Florida, 2015-2019

Births to Mothers with Third Trimester or No Prenatal Care

The third trimester of pregnancy begins during the 28th week of gestation and ends with delivery.⁴⁸ The risks of receiving late or no prenatal care are significant. Babies born to mothers who receive no prenatal care are three times more likely to have a low birth weight and five times more likely to die than those born to mothers who do get care.⁴⁹

This table shows the percentage of births to mothers with third trimester or no prenatal care in Palm Beach County and Florida from 2015 to 2019. Between 2015 and 2019, the percentage of births to mothers receiving third trimester prenatal care increased at both the state and county level. In the state of Florida, the percentage has grown from 5.5% in 2015 to 7.5% in 2019. In Palm Beach County, while the percentage has fluctuated slightly, the overall percentage rose from 7.1% in 2015 to 8.9% in 2019 for mothers receiving third trimester prenatal care.

Healthy People 2030 has not identified a national target for births to mothers with third trimester or no prenatal care.

Table 79: Births to Mothers with Third Trimester or No Prenatal Care, Palm Beach County and Florida, 2015-2019

Year	Palm Beach County		Florida	
	Count	Rate	Count	Rate
2015	963	7.1	203,862	5.5
2016	981	7.4	200,296	6.1
2017	1,118	8.4	199,076	6.9
2018	1,231	9.3	199,490	7.1

Births to Mothers with Third Trimester Prenatal Care, By Race

Racial and ethnic disparities also exist in third trimester prenatal care. The following table and graph show the percentage of births to mothers with third trimester prenatal care by race in Palm Beach County and Florida from 2015 to 2019. In both Palm Beach County and Florida, Black mothers were more likely to receive third trimester (late) prenatal care than White mothers between 2015 and 2019. While the percentage of births to White mothers with third trimester prenatal care in Palm Beach County increased each year from 2015 to 2019, the rate of births to Black mothers in Palm Beach County increased until 2018 and decreased from 2018 (12.9%) to 2019 (11.3%).

Healthy People 2030 has not identified a national target for third trimester prenatal care by race and ethnicity.

Table 80: Births to Mothers with Third Trimester Prenatal Care, By Race, Palm Beach County and Florida, 2015-2019

Year	Palm Beach County		Florida	
	White	Black	White	Black

Births to Mothers with Third Trimester Prenatal Care, By Ethnicity

This table and graph below show the percentage of births to mothers with third trimester prenatal care by ethnicity in Palm Beach County and Florida from 2015 to 2019. Hispanic mothers in Palm Beach County were more likely to receive third trimester (late) prenatal care compared to Non-Hispanic mothers across all years. Conversely, Hispanic mothers in Florida were less likely to receive third trimester (late) prenatal care compared to Non-Hispanic mothers across all years.

Table 81: Births to Mothers with Third Trimester Prenatal Care, By Ethnicity, Palm Beach County and Florida, 2015-2019

Figure 43: Births to Mothers with Third Trimester Prenatal Care, By Ethnicity, Palm Beach County and Florida, 2015-2019

Births To Mothers By Kotelchuck Prenatal Care Index By Mother's Education

The Kotelchuck Index, also referred to as the Adequacy of Prenatal Care Utilization (APNCU) Index, uses elements obtained from birth certificate data, including when prenatal care began (initiation) and the number of prenatal visits from when prenatal care began until delivery (received services), to determine the adequacy of prenatal care received.⁵⁰ A ratio of observed to expected visits is calculated and grouped into four categories: Inadequate (received less than 50% of expected visits), Intermediate (received 50%-79% of expected visits), Adequate (received 80%-109% of expected visits), and Adequate Plus (received 110% or more of expected visits).⁵¹ The Kotelchuck Index is recommended for use among low-risk pregnancies because high-risk pregnancies tend to require more visits than would normally be expected.

As seen in the table below, mothers with lower levels of education attainment were more likely to have experienced inadequate levels of prenatal care than mothers with higher levels of education. The proportion of mothers who experienced inadequate prenatal care was 54% among mothers with eighth-grade education or less, 44% among mothers with some high school education, 39% for mothers with a GED, and 26% for mothers with some college but no degree.

Healthy People 2030 has not identified a national target for births by the Kotelchuck Prenatal Care Index based on mother's education.

Table 82: Births by Kotelchuck Prenatal Care Index by Mother's Education, Palm Beach County, 2019

Mother's Education	Inadequate Prenatal Care	Intermediate Prenatal Care	Adequate Prenatal Care	Adequate Plus Prenatal Care	Unknown	Total

Births to Mothers with Less Than Adequate Prenatal Care

Non-White and Hispanic women are more likely to receive less than adequate prenatal care.⁵² The tables below show births to mothers with less than adequate prenatal care by race and ethnicity in Palm Beach County in 2019. Black mothers and Hispanic mothers in Palm Beach County were disproportionately more likely to receive less than adequate prenatal care in 2019. Looking at the births to mothers with less than adequate prenatal care by race, the rate of Black women who received inadequate prenatal care was 2.8 per 100,000 versus a rate of 1.4 per 100,000 for White women. Looking at births to mothers with less than adequate prenatal care by ethnicity in 2019, Hispanic women received inadequate prenatal care at a rate of 3.1 per 100,000 compared to Non-Hispanic women who received inadequate prenatal care at a rate of 1.3 per 100,000.

Healthy People 2030 has not identified a national target for the Kotelchuck Prenatal Care Index based on race or ethnicity.

Births to Mothers with Adequate Prenatal Care

Previous research indicates that white women are the most likely racial demographic to receive adequate prenatal care.⁵³ The following tables show the rate of births to mothers with adequate prenatal care by race and ethnicity in Palm Beach County in 2019. In Palm Beach County, Black (3.7 per 1,000) and Hispanic (4.2 per 1,000) mothers reported higher rates of adequate prenatal care than White (2.8 per 1,000) and Non-Hispanic (2.7 per 1,000) mothers.

Healthy People 2030 has not identified a national target for Kotelchuck Prenatal Care Index by race and ethnicity.

Maternal and Child Health: Overweight and Obesity

Births by Mother's Pre-Pregnancy BMI

Having a high pre-pregnancy BMI is associated with various adverse health outcomes for mothers and newborns, including gestational diabetes, hypertension, preeclampsia, cesarean delivery, preterm delivery, large size for gestational age, and infant death.⁵⁴

The following table shows the total number of births relative to mother's pre-pregnancy BMI in Palm Beach County from 2015 to 2019. In 2015, 6,971 (49%) of mothers that gave birth in Palm Beach County had a normal pre-pregnancy BMI, but by 2019 this number dropped to 6,095 (44%).

The Healthy People 2030 national target is to increase the percentage of mothers with a healthy weight before pregnancy to 47.1%.⁵⁵ Nationally, of 2018, 42.1% of women had a healthy BMI prior to pregnancy.⁵⁶ As of 2019, Palm Beach County was not meeting this target.

Table 87: Births by Mother's Pre-Pregnancy BMI, Palm Beach County, 2015-2019

Year	Palm Beach County					
	Underweight (< 18.5)	Normal Weight ($18.5-24.9$)	Overweight ($25.0-29.9$)	Obese I ($30.0-34.9$)	Obese II ($35.0-39.9$)	Obese III (≥ 40.0)

Births to Overweight Mothers at the Time Pregnancy Occurred

As previously mentioned, mothers and their babies are at less risk for adverse health outcomes when a mother has a normal pre-pregnancy BMI. The following table shows the rate of births to overweight mothers at the time pregnancy occurred in Palm Beach County from 2016 to 2020. In Palm Beach County, the rate of births to overweight mothers at the time of pregnancy fluctuated, but overall increased, from 25.9% in 2016 to 28.8% in 2020 (which was above the Florida rate of 27.6% in 2020). The rate of Palm Beach County births to overweight mothers at the time of pregnancy remained above the Florida rate every year reported, except 2016.

Births to Overweight Mothers at the Time Pregnancy Occurred, By Race

The table and graph below show the births to overweight mothers at the time pregnancy occurred by race in Palm Beach County from 2016 to 2019. As shown below, there were higher rates of births to overweight Black mothers than White mothers in Palm Beach County in all years except 2016. In 2019, the rate of births to overweight Black mothers (28.4%) fell just below the rate of births to overweight White mothers (28.6%).

The Healthy People 2030 national target is to increase the percentage of mothers achieving a healthy weight before pregnancy to 47.1%.

Table 89: Births to Overweight Mothers, Palm Beach County, By Race, 2016-2020

Births to Obese Mothers at the Time Pregnancy Occurred

The following table shows births to obese mothers at the time pregnancy occurred in Palm Beach County and Florida from 2015 to 2019. The rate of births to obese mothers at the time pregnancy occurred increased steadily between 2015 and 2019 for both Palm Beach County and Florida.

There is no Healthy People 2030 national target directly associated with this health indicator.

Births to Obese Mothers at the Time Pregnancy Occurred, By Race

The table and graph below show the rate of births to obese mothers in Palm Beach County by race from 2015 to 2019. In Palm Beach County, the percentage of births to obese Black and White mothers increased from 2015 to 2019. The largest increase was reported among Black mothers with a jump from 31.2% in 2015 to 37.2% in 2019.

WIC

WIC is a federally funded nutrition program that provides healthy foods, nutrition education and counseling, breastfeeding support, and referrals for families in need throughout Palm Beach County and the state of Florida. To be eligible for WIC services, families must meet the income thresholds based on household size.

The Florida Department of Health provides the following chart for eligibility determination⁵⁸:

Household Size	WIC Income Eligibility is Based on the Following Income Intervals				
	Annual	Monthly	Twice-Monthly	Bi Weekly	Weekly
1	\$23,828	\$1,986	\$993	\$917	\$459
2	\$32,227	\$2,686	\$1,343	\$1,240	\$620
3	\$40,626	\$3,386	\$1,693	\$1,563	\$782
4	\$49,025	\$4,086	\$2,043	\$1,886	\$943
5	\$57,424	\$4,786	\$2,393	\$2,209	\$1,105
6	\$65,823	\$5,486	\$2,743	\$2,532	\$1,266
7	\$74,222	\$6,186	\$3,093	\$2,855	\$1,428
8	\$82,621	\$6,886	\$3,443	\$3,178	\$1,589

Note: For a pregnant woman, each unborn baby counts as 1 extra person in the house size.
Those with more than 8 individuals in the household can contact their local WIC office for details.

WIC Eligibles Served

The following chart shows the number of individuals eligible to receive WIC benefits who were served from 2016 to 2020. In 2020, WIC eligibles served reached a five-year high in Palm Beach County with 75.8% served. This is significantly higher than the state percentage of 64.8% for the same year.

There is no Healthy People 2030 national target directly related to this indicator.

Table 94: WIC Eligibles Served, Palm Beach County and Florida, 2016-2020

Year	Palm Beach County		Florida	
	Count	Percent	Count	Percent
2016	31,394	73.8%	479,129	72.2%

Figure 48: WIC Eligibles Served, Palm Beach County and Florida, 2016-2020

WIC Children >= 2 Years Who Are Overweight or Obese

Research shows that once obesity develops, weight issues are likely to persist throughout an individual's lifespan.

Furthermore, rapid weight gain in infancy is strongly associated with obesity in childhood and adolescence.⁵⁹

Understanding the rates of children who are two years old or younger who are overweight or obese can help provide insight on the current and future health of a population.

The table below shows the rate of WIC children who were ages two years or younger and were either overweight or obese in Palm Beach County from 2016 to 2020. The rate fluctuated slightly from 2016 to 2020 in Palm Beach County, with the most recent rate being 29.8% in 2020. The state of Florida rate increased slightly from 26.4% in 2016 to 28.3% in 2020. Despite increasing, the Florida rate was still lower than the Palm Beach County rate each year reported.

There is no Healthy People 2030 national target directly related to this indicator.

Birth Rates

Total Resident Live Births

Live births rates are often used to determine sociological changes, including population changes, and to provide context to maternal health outcomes⁶⁰.

The table below shows the rate of total resident live births per 1,000 population in Palm Beach County and Florida from 2015 to 2019. The total resident live birth rate was lower in Palm Beach County compared to the state of Florida each year from 2015 to 2019. From 2015 to 2019, the rate in Palm Beach County decreased from 10.8 births per 1,000 population to 10.1 per 1,000 population.

Healthy People 2030 has not set a national target for total resident live births.

Table 96: Total Resident Live Births, Palm Beach County and Florida, 2015-2019

Year	Palm Beach County		Florida	
	Count	Rate	Count	Rate
2015	14,873	10.8	224,273	11.3
2016	14,963	10.7	225,018	11.1
2017	15,043	10.7	223,579	10.9
2018	15,064	10.4	221,508	10.6

Total Resident Live Births

The following table shows the total resident live birth rate per 100,000 population in Palm Beach County, Florida, and the surrounding counties in 2019. Palm Beach County (10.1 per 100,000), Saint Lucie County (10.1 per 100,000), and Miami-Dade County (10.7 per 100,000) each had a similar resident birth rate as the state of Florida (10.3 per 100,000). Glades County (4.1 per 100,000) had the lowest resident birth rate, while Hendry County (15.3 per 100,000) had the highest.

Healthy People 2030 has not set a national target for total resident live births.

Table 97: Total Resident Live Births, Palm Beach County, Florida, and Surrounding Counties, 2019

Area	Count	Rate
Florida	220,010	10.3
Palm Beach County	14,737	10.1

Births by Mother's Age and Race

Overall, 3,747,540 births were reported in the United States in 2019, down 1% from 2018.⁶¹ Nationally, birth rates decreased for females ages 15 to 34, increased for females ages 35 to 44, and were unchanged for females ages 10 to 14 years and 45 to 49 from 2018 to 2019. In 2019, the mean age of mothers at first birth was 27.0 years, an increase from 26.9 in 2018, and a record high for the nation.

This table shows the total number of births by mother's age and race in Palm Beach County in 2019. In Palm Beach County, the most births were among White mothers ages 30 to 34 (3,193) and ages 25 to 29 (2,393). Of all births reported, 64.4% (9,485) were among White women, 29.0% (4,273) were among Black and other race mothers, and 0.2% (27) were among an unknown race.

Healthy People 2030 has not set a national target for births by mother's age and race.

Table 98: Births by Mother's Age and Race, Palm Beach County, 2019

Age	Race			
	White	Black & Other	Unknown	Total
0-14 Years	4	3	--	7
15-19 Years	347	238	1	586
20-24 Years	1,270	885	3	2,158
25-29 Years	2,393	1,420	9	3,822
30-34 Years	3,193	1,430	7	4,630

Teenage Birth Rates and Repeat Teenage Birth Rates

Nationally, the birth rate for females ages 15 to 19 fell 4% between 2018 and 2019.⁶² Births to teenage mothers can have negative health, social, and economic effects for mothers and their children. Teen births can prevent mothers from pursuing educational and workforce opportunities, and repeat teen births are more likely to be preterm or of low birthweight than first teen births.⁶³

Repeat Births to Mothers Ages 15-17

The table below shows the percentage rate of repeat births to mothers ages 15 to 17 in Palm Beach County and Florida from 2016 to 2020. Repeat births to mothers ages 15 to 17 were highest in 2018 for Palm Beach County (8.4%). In 2020, 8.2% of births were repeat births to mothers ages 15 to 17 in Palm Beach County, which was higher than the statewide rate of 6.2%.

Healthy People 2030 has not set a national target for the percentage rate of repeat births to mothers ages 15 to 17.

Table 99: Repeat Births to Mothers Ages 15-17, Palm Beach County and Florida, 2016-2020

Repeat Births to Mothers Ages 15-17, By Race

This table and graph below show the percentage rate of repeat births to mothers ages 15 to 17 by race in Palm Beach County and Florida from 2016 to 2020. In Palm Beach County, with the exception of 2017 and 2020, White mothers were much more likely than Black mothers ages 15 to 17 to have a repeat birth during this time frame. Notably, the White rate was higher and the Black rate was lower in Palm Beach County as compared to the state rate for each year from 2016 to 2019.

Healthy People 2030 has not set a national target for the percentage rate of repeat births to mothers ages 15 to 17 by race.

Table 100: Repeat Births to Mothers Ages 15-17, By Race, Palm Beach County and Florida, 2016-2020

Figure 50: Repeat Births to Mothers Ages 15-17, By Race, Palm Beach County and Florida, 2016-2020

Repeat Births to Mothers Ages 15-17, By Ethnicity

This table and graph below show the percentage rate of repeat births to mothers ages 15 to 17 by ethnicity in Palm Beach County and Florida from 2016 to 2020. In Palm Beach County, Hispanics consistently reported higher rates of repeat births to mothers ages 15 to 17 as compared to Non-Hispanics, with the exception of 2020, a trend that was reflected at the state level. However, disparities between Hispanics and Non-Hispanics was much higher in Palm Beach County as compared to the state.

Healthy People 2030 has not set a national target for the percentage rate of repeat births to mothers ages 15 to 17 by ethnicity.

Table 101: Repeat Births to Mothers Ages 15-17, By Ethnicity, Palm Beach County and Florida, 2016-2020

Figure 51: Repeat Births to Mothers Ages 15-17, By Ethnicity, Palm Beach County and Florida, 2016-2020

Repeat Births to Mothers Ages 18-19

The following table shows the percentage rate of repeat births to mothers ages 18 to 19 in Palm Beach County and Florida from 2016 to 2020. Repeat births to mothers ages 18 to 19 have declined overall in both Palm Beach County and Florida. Peak repeat birth rates among mothers ages 18 to 19 were reported in 2016 for Palm Beach County (20.6%) and Florida (19.0%). The lowest repeat birth rates among mothers ages 18 to 19 were reported in 2020 in Palm Beach County (13.7%) and Florida (15.5%), as well.

Healthy People 2030 has not set a national target for repeat births for mothers ages 18 to 19.

Birth Weight

Live Births Under 1500 grams (Very Low Birth Weight)

About one percent of babies in the United States are born with very low birth weight.⁶⁴ Very low birth weight often coincides with premature birth and various health complications.

The following table shows the rate of live births under 1500 grams, indicating a very low birth weight, in Palm Beach County and Florida from 2015 to 2019. In Palm Beach County, the rate of live births under 1500 grams was under Florida's rate every year, with the exception of 2019. Palm Beach County reported its highest rate of 1.8% in 2019.

Healthy People 2030 has not set a national target for rates of very low birth weight.

Table 105: Live Births Under 1500 Grams (Very Low Birth Weight), Palm Beach County and Florida, 2015-2019

Year	Palm Beach County		Florida	
	Count	Rate	Count	Rate

Live Births Under 2500 Grams (Low Birth Weight)

The World Health Organization defines low birth weight (LBW) as a birth weight under 2500 grams, regardless of gestational age.⁶⁵ Low birth weight babies are 20 times more likely to develop complications and die in comparison to normal weight babies.⁶⁶

This table below shows the rate of live births under 2500 grams in Palm Beach County and Florida from 2015 to 2019. Each year during this time frame, the rates in Palm Beach County and Florida were similar. Additionally, from 2015 to 2018, the Palm Beach County rate was lower than the Florida rate. In 2019, Palm Beach County reported its highest rate of live births under 2500 grams at 9.0%.

Healthy People 2030 has not set a national target for rates of low birth weight.

Premature Births

A premature birth is a birth that takes place more than three weeks before a baby's estimated due date or before the start of the 37th week of pregnancy.⁶⁷ Premature births are associated with numerous health problems for newborns. Nationally, premature birth rates rose for the fifth straight year in 2019.⁶⁸ Additionally, racial and ethnic differences in premature birth rates continue to persist. In 2019, the rate of premature birth among African-American women in the United States was 14.4%, as compared to 9.3% among White women and 10% among Hispanic women.

Premature Births

The table below shows the rate of premature births in Palm Beach County and Florida from 2015 to 2019. During that timeframe, Palm Beach County saw an overall increase from 9.9 to 10.5, while Florida saw an increase of 10.0 to 10.5.

The Healthy People 2030 national target is to reduce the rate of premature births to 9.4.⁶⁹ As of 2019, Palm Beach County reported a rate of 10.5% and was not yet meeting this target.

Premature Births, By Race

This table and graph below show the rate of premature births by race in Palm Beach County and Florida from 2015 to 2019. In both Palm Beach County and Florida, disparities exist between premature births to White and Black mothers. In Palm Beach County, 8.7% of births to White mothers were premature, whereas 13.7% of births to Black mothers were premature.

Infant Mortality

Infant Deaths per 1,000 Live Births

Infant mortality is the death of an infant before his or her first birthday.⁷⁰ In 2019, the infant mortality rate in the United States was 5.6 deaths per 1,000 live births.

The following table shows the rate of infant deaths per 1,000 live births in Palm Beach County and Florida from 2015 to 2019. For each year between 2015 and 2019, Palm Beach County reported lower infant mortality rates than Florida.

Healthy People 2030 has set a national target of 5.0 deaths per 1,000 live births.⁷¹

Figure 57: Infant Deaths per 1,000 Live Births, By Ethnicity, Palm Beach County, 2015-2019

Fetal Deaths per 1,000 Live Births

Fetal death refers to the death of a fetus at any time during pregnancy.⁷² Fetal deaths later in pregnancy, at 20 weeks of gestation or more, are sometimes referred to as stillbirths. As of 2017, the United States reported 5.9 fetal deaths at 20 or more weeks of gestation per 1,000 live births and fetal deaths.⁷³

The table below shows the rate of fetal deaths per 1,000 live births in Palm Beach County and Florida from 2015 to 2019. Florida rates of fetal death remained between 6.7 and 6.9 during this five-year period, whereas Palm Beach County rates fluctuated. The highest rate reported in Palm Beach County was 7.3 in 2016 and the lowest was 4.4 in 2018.

Healthy People 2030 has set a national target of 5.7 fetal deaths per 1,000 live births and fetal deaths.⁷⁴ In 2019, Palm Beach County reported a fetal death rate of 6.5 and is not meeting this target.

Table 112: Fetal Deaths per 1,000 Live Births, Palm Beach County and Florida, 2015-2019

Year	Palm Beach County		Florida	
	Count	Rate	Count	Rate
2015	104	6.9	1,541	6.8
2016	110	7.3	1,548	6.8
2017	96	6.3	1,553	6.9
2018	67	4.4	1,495	6.7
2019	97	6.5	1,515	6.8

Fetal Deaths per 1,000 Live Births, By Race

The following table and graph show the fetal death rate per 1,000 live births by race in Palm Beach County from 2015 to 2019. Black mothers in Palm Beach County had much higher rates of fetal death compared to White mothers in Palm Beach County during this five-year period. In 2019, the rate of fetal death per 1,000 deliveries to Black mothers was 10.0, whereas the rate of fetal death to White mothers was 4.8.

Table 113: Fetal Death per 1,000 Live Births, By Race, Palm Beach County, 2015-2019

Figure 58: Fetal Deaths per 1,000 Live Births, By Race, Palm Beach County, 2015-2019

Fetal Deaths per 1,000 Live Births, By Ethnicity

The table and graph below show the fetal death rate per 1,000 live births by ethnicity in Palm Beach County and Florida from 2015 to 2019. Hispanic mothers in Palm Beach County had lower fetal death rates when compared to Non-Hispanic mothers each year during this time period. Most recently in 2019, Hispanic mothers had a fetal death rate of 6.2 per 1,000 deliveries and Non-Hispanic mothers had a rate of 6.5 per 1,000 deliveries.

Table 114: Fetal Deaths per 1,000 Live Births, By Ethnicity, Palm Beach County, 2015-2019

Year	Hispanic		Non-Hispanic

Breastfeeding

Breastfeeding newborns and infants has long been shown to have a wealth of health benefits to both mother and newborns/infants. For example, breastfeeding provides an important opportunity to facilitate skin-to-skin contact between mothers and newborns/infants, has been shown to be a protective factor against postpartum depression, and provides nutritional, immune, and cognitive benefits to the newborn/infant.⁷⁵

Mothers Who Initiate Breastfeeding

The table below shows the rate of mothers who initiated breastfeeding in Palm Beach County and Florida from 2015 to 2019. Mothers in Palm Beach County reported higher rates of breastfeeding initiation compared to mothers in Florida for every year during this time frame, except 2019. In 2019, the rate of mothers who initiated breastfeeding in Palm Beach County was 85.5%, while the state of Florida's rate was 86.0%.

Healthy People 2030 has not set a national target for breastfeeding initiation.

Table 115: Mothers Who Initiate Breastfeeding, Palm Beach County and Florida, 2015-2019

Year	Palm Beach County		Florida

Immunization

Fully Immunized Children, Age Two

Immunizations protect young children from multiple deadly diseases and work to prevent the transfer of such diseases from child to child.⁷⁶ Immunizations have largely eradicated diseases such as polio, tetanus, and rubella. The table below shows the rate of fully immunized children age two in Palm Beach County and Florida from 2015 to 2019. From 2017 to 2019, rates of fully immunized children age 2 for Palm Beach County were lower than the Florida rate. In 2019, Palm Beach County reported that 76.0% of children age 2 were fully immunized, whereas 83.5% of children age 2 across the state of Florida were fully immunized.

Healthy People 2030 has not set a national target for full immunization by age 2.

Table 116: Fully Immunized Children, Age Two, Palm Beach County and Florida, 2015-2019

Year	Palm Beach County	Florida
2015	85.4%	85.5%
2016	90.5%	84.1%

Immunization Levels in Kindergarten

This table and graph below show the rate of immunization levels in Kindergarten for Palm Beach County and Florida from 2016 to 2020. The immunization rate for children in Kindergarten in Palm Beach County was lower than the Florida rate each year from 2015 to 2019. From 2019 to 2020, the immunization rate in Kindergarten fell from 93.5% to 92.1% in Palm Beach County.

Healthy People 2030 has not set a national target for immunizations in Kindergarten.

Table 117: Immunization Levels in Kindergarten, Palm Beach County and Florida, 2016-2020

Oral Health

Preventable Hospitalizations Under 65 From Dental Conditions

Dental conditions that go untreated can lead to negative health outcomes.⁷⁷ Tooth decay and periodontal disease, for instance, are associated with a number of life-threatening conditions, including sepsis, diabetes, and heart disease. Many Americans delay or do not receive dental care despite its association with general health outcomes. Individuals without a usual source of dental care may visit hospital emergency departments for treatment. The cost of dental-related visits that are treated in the emergency room exceeded \$2 billion nationally in 2017.⁷⁸

The following table shows the rate of preventable hospitalizations from dental conditions for individuals under age 65 per 100,000 population under age 65 in Palm Beach County and Florida from 2015 to 2019. Every year during this time frame, Palm Beach County reported a higher rate than the Florida rate. The lowest rates reported for Palm Beach County (12.4 per 100,000 population) and Florida (11.9 per 100,000 population) were both in 2019.

Healthy People 2030 has not set a national target for preventable hospitalizations from dental conditions for those under 65.

Table 119: Preventable Hospitalizations Under 65 from Dental Conditions, Rate Per 100,000 Population Under 65, Palm Beach County and Florida, 2015-2019

Year	Palm Beach County		Florida	
	Count	Rate	Count	Rate

Vaccine Preventable Diseases

Selected Vaccine Preventable Disease Rate

Vaccines are generally effective at preventing diseases for individuals of all ages.⁷⁹ Due to vaccination campaigns, certain diseases, such as polio and diphtheria, are no longer problematic in the United States.⁸⁰ Vaccine preventable diseases are monitored to identify gaps in vaccine coverage.

This table shows the selected vaccine preventable disease rate in Palm Beach County and Florida from 2013 to 2017. The selected vaccines here include diphtheria, acute hepatitis B, measles, mumps, pertussis, rubella, tetanus, and polio. Between 2013 and 2016, Palm Beach County reported lower rates of vaccine preventable diseases than the state of Florida. In 2017, the Palm Beach County rate of 6.0 per 100,000 rose higher than Florida's rate of 5.8 100,000.

Healthy People 2030 has not set a national target for a vaccine preventable disease rate for diphtheria, acute hepatitis B, measles, mumps, pertussis, rubella, tetanus, and polio.

Table 120: Selected Vaccine Preventable Disease Rate, Palm Beach County and Florida, 2013-2017

Year	Palm Beach County		Florida

Behavioral Health

Mental Health

Adults with Good Mental Health

Mental health status affects the quality of social, work and other relationships, increases the likelihood of substance misuse, and is associated with a variety of negative health outcomes.⁸¹ The absence of good mental health can reduce the ability of individuals to work, maintain relationships, and stay away from addictive substances.

The table below shows the rate of adults with good mental health in Palm Beach County and Florida in 2013, 2016, and 2019. From 2013 to 2016, Palm Beach County reported a 2.1% drop in the percentage of adults with good mental health, followed by a 2.5% increase from 2016 to 2019. In the state of Florida, the percentage increased 1.3% between 2013 and 2016, but decreased 2.4% between 2016 and 2019. Additionally, the percentage of adults with good mental health was higher in Palm Beach County (90.8%) than in Florida (86.2%) in 2019.

Healthy People 2030 has not set a national target for the percentage of adults with good mental health.

Table 121: Adults with Good Mental Health, Palm Beach County and Florida, 2013, 2016, 2019

Year	Palm Beach County	Florida

Adults Who Had Poor Mental Health On > 14 Of the Past 30 Days

As mentioned above, adults with poor mental health may face difficulties with social and economic opportunities and may encounter worse health outcomes as compared to adults with good mental health. The table below shows the percentage of adults with poor mental health on more than 14 of the past 30 days in Palm Beach County and Florida in 2013, 2016, and 2019. In Palm Beach County, the percentage of adults with poor mental health on more than 14 of the past 30 days increased 2.1% from 2013 to 2016, and decreased 2.5% from 2016 to 2019. Most recently in 2019, the rate of adults with poor mental health on more than 14 of the past 30 days was 9.2% in Palm Beach County, much lower than the Florida rate of 13.8%.

Healthy People 2030 has not set a national target for the percentage of adults with poor mental health on more than 14 of the past 30 days.

Adults Who Have Ever Been Told They Had A Depressive Disorder

For many people with depression, symptoms are often severe enough to cause noticeable problems in daily activities- including work, school, or social relationships.⁸² The following table shows the percentage of adults who have ever been told they have a depressive disorder in Palm Beach County and Florida in 2013, 2016, and 2019. In Palm Beach County, this percentage decreased steadily from 13.8% in 2013 to 12.4% in 2019, and was lower than the Florida rate for each year reported. In Florida, the rate dropped from 16.8% in 2013 to 14.2% in 2016, and then rose to 17.7% in 2019.

Healthy People 2030 has not set a national target for the percentage of adults who have ever been told they have a depressive disorder.

Adults Whose Poor Physical or Mental Health Kept Them from Usual Activities (>14 Of the Past 30 Days)

The table below shows the rate of adults whose poor physical or mental health kept them from usual activities for more than 14 of the past 30 days. In Palm Beach County, there was a sharp 8.3% increase between 2013 (11.4%) and 2016 (19.7%) and a 5.7% decrease between 2016 (19.7%) and 2019 (14.0%). In 2019, the Palm Beach County rate of 14.0% was much lower than the Florida rate of 18.3%.

Healthy People 2030 has not set a national target for the percentage of adults whose poor physical or mental health kept them from usual activities in more than 14 of the past 30 days.

Alcohol Consumption

Adults Who Engage in Heavy or Binge Drinking

Heavy or binge drinking is associated with numerous health problems, including liver disease, high blood pressure, stroke, heart disease, and cancer.⁸³ Heavy or binge drinking is also associated with car crashes, suicide, assault, and other violent crimes. Annually, excessive alcohol use is responsible for 95,000 deaths in the United States, including 1 in 10 total deaths among working-age adults.⁸⁴

The table below shows the rate of adults who engage in heavy or binge drinking in Palm Beach County and Florida for the years 2010, 2013, 2016, and 2019. In Palm Beach County, the percentage increased from 2010 (14.8%) to 2016 (17.8%), followed by a drop to 15.9% in 2019. In 2019, the percentage of adults engaging in heavy or binge drinking in Palm Beach County was 2.1% below the Florida percentage of 18.0% (the highest percentage of all years reported).

Healthy People 2030 has set a national target of 25.4% for the percentage of individuals age 21 or older who engages in binge drinking in the past month.⁸⁵ While this data indicates adults who engage in heavy or binge drinking overall, any reduction in these numbers is progress towards a healthier community.

Table 125: Adults who Engage in Heavy or Binge Drinking, Palm Beach County and Florida, 2010, 2013, 2016, 2019

Percent of Middle School Students Who Have Used Alcohol in the Past 30 Days

Nationally, 10% of eighth graders have reported using alcohol in the past 30 days, a particularly concerning figure considering that underage drinking is associated with school, social, and legal problems.⁸⁶ The following table shows the percentage of middle school students who have used alcohol in the past 30 days in Palm Beach County and Florida in 2010, 2012, 2014, and 2016. From 2010 to 2016, the percentage in Palm Beach County and Florida has steadily decreased. The percentage dropped from 19.1% in 2010 to 9.2% in 2016 in Palm Beach County, and from 16.8% in 2010 to 8.3% in 2016 in Florida. In 2019, the percentage of middle school students who had used alcohol in the past 30 days in Palm Beach County was slightly higher than the percentage statewide.

The Healthy People 2030 national target is to reduce the percentage of adolescents who have used alcohol in the past month to 6.3%.⁸⁷

Table 126: Percent of Middle School Students Who Have Used Alcohol in the Past 30 Days, Palm Beach County and Florida, 2010, 2012, 2014, 2016

Year	Palm Beach County	Florida

Percent of Middle School Students Who Report Binge Drinking

The table below shows the percentage of middle school students who reported binge drinking in the past two weeks in Palm Beach County and Florida in 2010, 2012, 2014, and 2016. Binge drinking is defined as having five or more alcoholic drinks in a row.⁸⁸ In Palm Beach County and Florida, rates of binge drinking among middle school students dropped between 2010 and 2016. The rate in Palm Beach County decreased from 6.6% in 2010 to 3.3% in 2016, while the Florida rate decreased from 6.9% in 2010 to 3.2% in 2019.

The Healthy People 2030 national target is to reduce the proportion of people under age 21 who have engaged in binge drinking in the past month to 8.4%.⁸⁹ While the data below only indicates the percentage of middle school students who reported binge drinking, any reduction in these numbers is progress towards a healthier community.

Table 127: Percent of Middle School Students Who Report Binge Drinking, Palm Beach County and Florida, 2010, 2012, 2014, 2016

Year	Palm Beach County	Florida
2010	6.6%	6.9%
2012	4.2%	4.7%

Percent of High School Students Who Have Used Alcohol in the Past 30 Days

High schoolers who drink alcohol are more likely to report higher levels of absenteeism, in addition to social, legal, and health problems.⁹⁰ The table below shows the percentage of high school students who have used alcohol in the past 30 days in Palm Beach County and Florida in 2010, 2012, 2014, and 2016. From 2010 to 2016, the rate in Palm Beach County decreased 14.8%, dropping from 41.8% in 2010 to 27.0% in 2016. During the same time period, the rate in Florida decreased 2.5%, dropping from 38.0% in 2010 to 35.5% in 2016. Most recently in 2016, the rate of high school students who reported using alcohol in the past 30 days in Palm Beach County (27.0%) was 8.5% lower than the rate in Florida (35.5%).

Healthy People 2030 has not set a national target for the percentage of high school students who have used alcohol in the past 30 days.

Percent of High School Students Who Report Binge Drinking

As previously mentioned, binge drinking is a public health issue that is particularly consequential for those under age 21. This table shows the percentage of high school students who reported binge drinking in the past two weeks in Palm Beach County and Florida in 2010, 2012, 2014, and 2016. Binge drinking is defined as having five or more alcoholic drinks in a row.⁹¹ The rate in Palm Beach County decreased by 11.2%, dropping from 21.0% in 2010 to 9.8% in 2016. The rate in Florida decreased by 8.7%, dropping from 19.6% in 2010 to 10.9% in 2016. Most recently in 2016, the percentage of high school students who reported binge drinking in Palm Beach County (9.8%) was 0.8% below the state percentage (10.9%).

The Healthy People 2030 national target is to reduce the proportion of people under age 21 who have engaged in binge drinking in the past month to 8.4%. While the data below indicates only the percentage of high school students who reported binge drinking, any reduction in these numbers is progress towards a healthier community.

Table 129: Percent of High School Students Who Report Binge Drinking, Palm Beach County and Florida, 2010, 2012, 2014, 2016

Year	Palm Beach County	Florida
2010	21.0%	19.6%
2012	18.1%	16.4%
2014	15.9%	13.7%
2016	9.8%	10.9%

Suicide

In 2019, suicide was the tenth leading cause of death in the United States with 47,511 deaths attributed to intentional self-harm.⁹² Suicides are often considered preventable through evidence-based, low-cost interventions.⁹³ Suicide rates have increased over the past two decades.⁹⁴

Age Adjusted Suicide Death Rate

The table below shows the age-adjusted suicide death rate per 100,000 population in Palm Beach County and Florida from 2015 to 2019. The suicide rate in Palm Beach County decreased from 2015 (15.5 per 100,000) to 2017 (12.2 per 100,000), then increased in 2018 (15.4 per 100,000), and decreased in 2019 (13.9 per 100,000). Most recently in 2019, the Palm Beach County rate of 13.9 per 100,000 population was slightly lower than the Florida rate of 14.5 per 100,000 population.

The Healthy People 2030 national target is to reduce the rate of suicide deaths to 12.8 suicide deaths per 100,000 population.⁹⁵ As of 2019, Palm Beach County is not meeting this target.

Table 130: Age-Adjusted Suicide Death Rate, Palm Beach County and Florida, 2015-2019

Year	Palm Beach County		Florida	
	Count	Rate	Count	Rate
2015	229	15.5	3,152	14.4

Suicide Death Count

Historically, younger individuals have reported lower suicide rates as compared to middle ages and older individuals, and according to the American Foundation for Suicide Prevention, the highest rates of suicide in the United States are reported among middle-ages White males.⁹⁶ When looking at racial differences in suicide rates, the highest age-adjusted suicide rate in the United States was found among White individuals, with Black, Asian and Hispanics reporting the lowest rates.

The table below shows the suicide death count by age in Palm Beach County from 2015 to 2019. When looking at the total number of suicides from 2015 to 2019 for each age group, the highest suicide count was reported among

⁹² Centers for Disease Control and Prevention. National Center for Health Statistics. Leading Causes of Death. <https://www.cdc.gov/nchs/fastats/leading-causes-of-death.htm>

those ages 55 to 64 (245), followed by those ages 45 to 54 (211), and those ages 65 to 74 (162). From 2018 to 2019, every age group saw a decrease in total suicide deaths in Palm Beach County, except ages 85 and over.

The Healthy People 2030 national target is to reduce the rate of suicide deaths to 12.8 suicides per 100,000 population. While the data below shows total suicide death counts, any reduction in these numbers is progress towards a healthier community.

Table 131: Suicide Death Count, By Age, Palm Beach County, 2015-2019

Age	Year					Total
	2015	2016	2017	2018	2019

Suicide Death Count, By Race

The following table shows the suicide death count by race in Palm Beach County from 2015 to 2019. Each year during this time frame, the suicide death count for White individuals far exceeded the count for Black, Other, and Unknown races combined. Additionally, the number of suicide deaths for White individuals fluctuated from 2015 to 2019, but decreased from 226 in 2018 to 204 in 2019.

Table 132: Suicide Death Count, By Race, Palm Beach County, 2015-2019

Year	Palm Beach County				
	White	Black	Other	Unknown	Total
2015	208	17	4	--	229
2016	206	18	5	1	230
2017	181	15	3	--	199
2018	226	18	3	--	247

Suicide Death Count, by Ethnicity

The table below shows the suicide death count by ethnicity in Palm Beach County from 2015 to 2019. The Non-Hispanic suicide death count was much higher than the Hispanic count in Palm Beach County each year from 2015

to 2019. Most recently, the suicide death count declined for Non-Hispanics (from 217 in 2018, to 201 in 2019), and for Hispanics (from 27 in 2018, to 24 in 2019).

Table 133: Suicide Death Count, By Ethnicity, Palm Beach County, 2015-2019

Crude Suicide Death Rate

The table below shows the crude suicide death rate in Palm Beach County and Florida from 2016 to 2020. The crude suicide death rate in Palm Beach County was higher than the Florida rate in 2015, 2016, and 2018. Palm Beach County reported its lowest rate in 2020 (at 11.6 per 100,000 population), and its highest in 2018 (at 17.1 per 100,000 population). In 2020, the crude suicide death rate in Palm Beach County (11.6 per 100,000) was lower than the statewide rate (14.4 per 100,000).

The Healthy People 2030 national target is to reduce the age-adjusted suicide death rate to 12.8 suicides per 100,000 population. While the data below is reported in the crude rate, any reduction in these numbers is progress towards a healthier community.

Table 134: Crude Suicide Death Rate, Palm Beach County and Florida, 2016-2020

Year	Palm Beach County		Florida	
	Count	Rate	Count	Rate

Calls to 211 Related to Suicide

The table below shows the number of calls to 211 related to suicide in Palm Beach County. In 2020, there were 18,208 mental health or substance use related calls to 211 in Palm Beach County- 851 of which were suicide related

calls. Mental health or substance use calls, including suicide calls, comprised 22.1% of all calls to 211 in Palm Beach County in 2020.⁹⁷

Healthy People 2030 has not set a national target for calls to 211 related to suicide.

Table 135: Calls to 211 Related to Suicide, Palm Beach County, 2020

Domestic Violence by Offense Type by Victim's Relationship to Offender

Well-known or casual acquaintances account for 32% of all violent victimizations in the United States.⁹⁸ The following table shows the number of domestic violence offenses by type and by the victim's relationship to the offender in Palm Beach County in 2019. Simple assault and aggravated assault accounted for a total of 3,255 arrests, or 97.6% of all domestic violence offenses. For both simple assault and aggravated assault, spouses were the most likely offenders, followed by cohabitants. Across all offenses, spouses were the most likely perpetrators of domestic violence offenses.

Healthy People 2030 has not set a national target for domestic violence by offense type to victim's relationship to offender.

Table 136: Domestic Violence by Offense Type by Victim's Relationship to Offender, Palm Beach County, 2019

Offense	Relationship to Victim Offender								Arrests
	Total	Spouse	Parent	Child	Sibling	Other Family	Cohabitant	Other	
Murder	10	5	1	1	0	1	1	1	4

Tobacco

Adults Who Are Current Smokers

Smoking leads to a wide variety of diseases and disabilities and is known to cause harm to nearly every organ in the body.⁹⁹ Over 16 million Americans are living with a disease caused by smoking. Importantly, for every person who has died of smoking, at least thirty people live with a smoking-related health complication.

The table below shows the percentage of adults who were current smokers in Palm Beach County and Florida in 2010, 2013, 2016, and 2019. Each year reported, except 2016, Palm Beach County had a lower percentage of adult smokers compared to Florida. From 2016 to 2019, the rate in Palm Beach County decreased from 16.3% to 11.0%. The rate of 11.0% in 2019 for the county was lower than the Florida rate of 14.8%.

The Healthy People 2030 national target is to reduce the percentage of all individuals over 18 years old being current cigarette smokers to 5.0%.¹⁰⁰ Palm Beach County is not yet meeting this target.

Table 137: Adults Who Are Current Smokers, Palm Beach County and Florida, 2010, 2013, 2016, 2019

Year	Palm Beach County	Florida
2010	9.0%	17.1%
2013	9.5%	16.8%

High School Students Smoking Cigarettes in The Past 30 Days

The table below shows the percentage of high school students who smoked cigarettes in the past 30 days in Palm Beach County and Florida in 2014, 2016, 2018, and 2020. From 2014 to 2020, Palm Beach County and Florida both reported sharp declines in high school cigarette smoking rates. In 2020, 4.6% of high school students nationally reported smoking cigarettes in the past 30 days.¹⁰¹ Palm Beach County (2.0%) and Florida (2.3%) reported their lowest rates that same year. For each year reported, the rate of high school students smoking cigarettes in Palm Beach County was lower than the Florida rate.

The Healthy People 2030 national target is to reduce the proportion of adolescents who had used cigarettes in the past 30 days to 3.4%.¹⁰² While this data only looks at high school students, any reduction in these numbers is progress towards a healthier community.

Middle School Students Smoking Cigarettes in The Past 30 Days

In 2020, 1.5% of middle schoolers nationally reported smoking cigarettes in the past 30 days.¹⁰³ The table below shows the percentage of middle school students who had smoked cigarettes in the past 30 days in Palm Beach County and Florida in 2014, 2016, 2018, and 2020. From 2014 to 2018, the percentage in Palm Beach County declined from 2.5% to 0.6%, then increased from 0.6% in 2018 to 0.9% in 2019. Additionally, the percentage of middle school students who had smoked a cigarette in the past 30 days in Palm Beach County was lower than the Florida percentage every year reported, except 2014.

The Healthy People 2030 national target is to reduce the proportion of adolescents who had used cigarettes in the past 30 days to 3.4%.¹⁰⁴ While this data only looks at middle school students, any reduction in these numbers is progress towards a healthier community.

understood, there is compelling evidence to suggest that e-cigarettes may contribute lung injury. In addition, the high levels of nicotine in e-cigarettes make them incredibly addictive.

The following table shows the percentage of adults who were current e-cigarette users in Palm Beach County and Florida in 2016 and 2019. This percentage decreased for Palm Beach County from 6.4% in 2016 to 5.4% in 2019. Florida, however, reported an increase from 4.7% in 2016 to 7.5% in 2019.

Healthy People 2030 has not set a national target for the percentage of adults who are current e-cigarette users.

Table 140: Percent of Adults Who Are Current E-cigarette Users, Palm Beach County and Florida, 2016 and 2019

Opioid Use

Opioid Prescriptions, Per 100,000 Population

As of 2016, the Centers for Disease Control and Prevention issued updated guidelines for prescribing opioids for chronic pain in response to the opioid epidemic in years prior. Chronic opioid therapy has affected millions of Americans, sometimes leading to addictive behavior and an increased risk of overdose. As opioids became increasingly available through liberal prescriptions, the United States saw a sharp increase in heroin use and drug overdose deaths, which increased 137% between 2000 and 2014. In the same time period, overdoses involving prescription opioids and heroin increased 200%.¹⁰⁶

In both Palm Beach County and Florida, prescriptions, unique patients receiving opioid prescriptions, and unique prescribers with opioids dispensed have steadily between 2017 and 2019. In 2019, 54,122 prescriptions were dispensed in Palm Beach County, compared to 64,994 in 2017.

There is no Healthy People 2030 national target directly related to opioid prescriptions dispensed.

Table 141: Opioid Prescriptions, Per 100,000 Population, Palm Beach County and Florida, 2017-2019

	Palm Beach County			Florida		
	2017	2018	2019	2017	2018	2019
Prescription Dispensed	64,994	58,069	54,122	75,214	66,829	59,687

Opioid-Related Emergency Department Visits

Studies have shown that frequent emergency department visits for opioid overdose are associated with an increased likelihood of future hospitalizations and near-fatal events from opioid misuse. In one study, 53% of emergency department visits for opioid overdose resulted in hospitalization and 10.0% of emergency department visits for opioid overdose led to a near-fatal event.¹⁰⁷

In Palm Beach County, opioid-related emergency department visits decreased between 2017 (225.1 per 100,000 population) and 2019 (110.6 per 100,000 population). The state of Florida reported an initial decrease in visits between 2017 (89.4 per 100,000) and 2018 (69.7 per 100,000 population), but rates increased in 2019 to 79.0 visits per 100,000 population.

While there is no current Healthy People 2030 national target directly related to opioid-related emergency department visits for all populations, an objective to reduce the rate of opioid-related emergency department visits is in the developmental stages. This highlights opioid-related emergency department visits as a high-priority public health issue that has evidence-based interventions available. Once baseline data becomes available for this objective on the national level, it will be considered to become a core Healthy People 2030 objective.

Opioid-Related Non-Fatal Hospitalizations

It is estimated that approximately 7,000 people are treated in emergency departments for opioid misuse each day in the United States. According to research, mortality rates among opioid-related hospitalizations have increased more than fourfold in recent years compared to general decreasing mortality rates among all other hospitalizations in the country.¹⁰⁸

Palm Beach County has reported a decreasing trend in opioid-related non-fatal hospitalizations between 2017 (50.3 hospitalizations per 100,000 population) and 2019 (38.3 hospitalizations per 100,000 population). The state of Florida experienced a similar decreasing trend, reporting 44.3 hospitalizations per 100,000 population in 2017 and 36.3 hospitalizations per 100,000 population in 2019.

There is no Healthy People 2030 national target directly related to opioid-related non-fatal hospitalizations.

Figure 64: Opioid-Related Non-Fatal Hospitalizations, Palm Beach County and Florida, 2017-2019

Age-Adjusted Opioid Deaths, Per 100,000 Population

According to the Centers for Disease Control and Prevention, the number of drug overdose deaths has quadrupled between 1999 and 2019. The United States reported a nearly 5% increase in drug overdose deaths from 2018 to 2019 alone. In this same time period, opioid-involved death rates increased by over 6% nationally. Prescriptions opioid-involved death rates decreased by nearly 7%. Synthetic opioid-involved death rates (excluding methadone) increased by over 15%. Overall, it is estimated that 136 people die each day from an opioid overdose, including both prescription and illicit opioids.¹⁰⁹

In Palm Beach County, the rate of age-adjusted opioid deaths decreased from 2017 (51.0 deaths per 100,000 population) to 2018 (30.9 deaths per 100,000 population). A slight increase was subsequently seen between 2018 and 2019 (36.7 deaths per 100,000 population).

The Healthy People 2030 national target is to reduce overdose deaths involving opioids from 14.6 deaths per 100,000 population to 13.1 deaths per 100,000 population.¹¹⁰ As of 2019, Palm Beach County is not yet meeting this target.

Figure 65: Age-Adjusted Opioid Deaths, Per 100,000 Population. Palm Beach County and Florida, 2017-2019

Opioid Deaths, By Substance

According to the Centers for Disease Control and Prevention, over 70% of drug overdose deaths in 2019 involved an opioid. Synthetic opioids were involved in 72.9% of all opioid-involved overdose deaths.

Fentanyl was responsible for the most Palm Beach County deaths involving opioids in 2018 (335 deaths) and 2019 (434 deaths). In 2019, fentanyl analogs were involved 337 opioid deaths, followed by Morphine (264 opioid deaths) and heroin (205 deaths) in Palm Beach County. In the state of Florida in 2019, fentanyl was involved in the most opioid deaths (3,655), followed by morphine (1,855) fentanyl analogs (1,418), and Oxycodone (1,181).

Marijuana

Adults Who Used Marijuana or Hashish During the Past 30 Days

Marijuana is the most commonly used illegal drug in the United States with nearly a fifth of all Americans reporting to have used it at least once.¹¹¹ Approximately 30% of marijuana users have marijuana use disorder, or an unhealthy dependence on the substance. Research suggests that marijuana use results in negative impacts on memory, learning, attention, decision-making, coordination, emotion, and reaction time.

The table below shows the percentage of adults who had used marijuana or hashish during the past 30 days in Palm Beach County and Florida in 2016. During this year, the percentage of adults in Palm Beach County who used marijuana or hashish during the past 30 days was 5.7% (which was 1.7% lower than the Florida rate).

The Healthy People 2030 national target is to reduce the percentage of adults who use marijuana daily or almost daily to 3.4%.¹¹² Palm Beach County is not yet meeting this target.

Table 146: Adults Who Used Marijuana or Hashish During the Past 30 Days, Palm Beach County and Florida, 2016

Year	Palm Beach County	Florida
2016	5.7%	7.4%

Source: Florida Health CHARTS, Florida Behavioral Risk Factor Surveillance System, 2016
Compiled by: Health Council of Southeast Florida, 2021

High School Students Who Used Marijuana or Hashish During the Past 30 Days

The risk of developing marijuana use disorder is greater among those under age 18 than among adults.¹¹³ The effects of marijuana use on the brain are especially profound for infants, children, and teens whose brains are still developing.

The table below shows the percentage of high school students who had used marijuana or hashish during the past 30 days in Palm Beach County and Florida in 2010, 2012, 2014, and 2016. Palm Beach County reported a higher rate than Florida every year, except 2016. Both the Palm Beach County rate and the Florida rate dropped from 2014 to 2016. In Palm Beach County, the rate of high school students who used marijuana or hashish during the past 30 days decreased from 22.6% to 15.4% in that time frame.

Middle School Students Who Used Marijuana or Hashish During the Past 30 Days

As mentioned above, the negative health impacts from marijuana use are greater for those under the age of 18. The table below shows the percentage of middle school students who used marijuana or hashish during the past 30 days in Palm Beach County and Florida in 2010, 2012, 2014, and 2016. While the Palm Beach County rate fluctuated from year to year, it decreased from 4.1% in 2014 to 2.4% in 2016. The Florida rate gradually decreased from 5.7% in 2010 to 3.2% in 2016.

The Healthy People 2030 national target is to reduce the percentage of adolescents who have used marijuana in the past 30 days to 5.8%.¹¹⁵ While the data below only looks at middle school students, any reduction in these numbers is progress towards a healthier community.

Self-Inflicted Injuries

Non-Fatal Hospitalizations for Self-Inflicted Injuries Ages 12-18

Young adults are the most likely demographic to suffer from non-fatal hospitalizations due to self-inflicted injuries.¹¹⁶ Such behaviors are particularly important to monitor as self-inflicted injuries are a risk factor for suicide.

The following table shows the non-fatal hospitalization rate per 100,000 population for self-harm injuries ages 12 to 18 in Palm Beach County and Florida from 2015 to 2019. For each year during this timeframe, the Palm Beach County rate was notably lower than the Florida rate. In both Palm Beach County and Florida, the rate decreased from 2017 to 2019. The lowest rate in Palm Beach County was 40.6 per 100,000 population in 2019.

The Healthy People 2030 national target is to reduce the rate of hospitalizations for non-fatal self-injury for individuals 10 years and older to 144.7 per 100,000 population.¹¹⁷ While this data only looks at ages 12 to 18, any reduction in these numbers is progress towards a healthier community.

Table 149: Non-Fatal Hospitalizations for Self-Harm Injuries Ages 12-18, Palm Beach County and Florida, 2015-2019

Year	Palm Beach County		Florida	
	Count	Rate	Count	Rate
2015	67	61.1	1,186	73.1
2016	56	51.0	1,141	70.0
2017	67	60.8	1,198	72.9
2018	66	58.8	1,149	68.7
2019	46	40.6	1,063	62.8

Non-Fatal Hospitalizations for Self-Inflicted Injuries, Ages 19-21

As mentioned above, non-fatal self-injuries among young adults are associated with suicide and suicidal ideation, so it is important to monitor non-fatal self-injury hospitalization rates. The table below shows the non-fatal hospitalization counts and rates for self-harm injuries ages 19 to 21 in Palm Beach County and Florida from 2015 to 2019. During this time frame, the Palm Beach County rate fluctuated, with the lowest rate of 36.3 per 100,000 population reported in 2015 and the highest of 77.3 per 100,000 population reported in 2019. Additionally, the Palm Beach County rate of 64.8 per 100,000 population in 2018 and 77.3 per 100,000 population in 2019 was higher than the Florida rate during each of those years.

¹¹⁶ Mercado, Melissa C et al. "Trends in Emergency Department Visits for Nonfatal Self-inflicted Injuries Among Youth Ages 10 to 24 Years in the United States, 2001-2015." *JAMA* vol. 318,19 (2017): 1931-1933. doi:10.1001/jama.2017.13317

The Healthy People 2030 national target is to reduce the rate of hospitalizations for non-fatal self-injury to 144.7 per 100,000 population.¹¹⁸ While this data only looks at ages 19 to 21, any reduction in these numbers is progress towards a healthier community.

Table 150: Non-Fatal Hospitalizations for Self-Harm Injuries Ages 19-21, Palm Beach County and Florida, 2015-2019

Year	Palm Beach County		Florida

Eating Disorders

According to the Johns Hopkins All Children's Hospital, thirty million people have an eating disorder in the United States, and 95% of people suffering from eating disorders are between the ages of 12 and 25.¹¹⁹ The most common eating disorders include anorexia nervosa, bulimia nervosa, binge eating disorder, avoidant restrictive food intake disorder, and other specified feeding or eating disorder.

Non-Fatal Hospitalizations for Eating Disorders Ages 12-18

The following table shows the non-fatal hospitalizations for individuals with eating disorders ages 12 to 18 in Palm Beach County and Florida from 2015 to 2019. During this time frame, rates in Palm Beach County have fluctuated, with a low of 19.2 per 100,000 population in 2015 and a high of 35.5 per 100,000 population in 2016. In 2019, Palm Beach County reported a rate of 29.1 per 100,000 population, which was an increase from the 2018 rate of 26.7 per 100,000 population. During every year reported, the Palm Beach County rate was lower than the Florida rate. Healthy People 2030 has not identified a national target for non-fatal hospitalizations for eating disorders among those ages 12 to 18.

Table 151: Non-Fatal Hospitalizations for Eating Disorders Ages 12-18, Palm Beach County and Florida, 2015-2019

Morbidity

Coronary Heart Disease

Heart disease refers to various conditions that affect the health of the heart. Key risk factors for heart disease include high blood pressure, high cholesterol, excessive alcohol use and smoking, as well as contributing factors such as diet and physical activity. Heart disease cost the United States roughly \$219 billion in 2014 and 2015, which included the cost of health care services, medicines, and lost productivity due to death.¹²⁰

Age-Adjusted Hospitalization from or With Coronary Heart Disease

Coronary heart disease is a type of heart disease that develops when the arteries of the heart cannot deliver enough oxygen-rich blood to the heart. Coronary heart disease is the leading cause of death in the United States.¹²¹ The rate of hospitalizations from or with coronary heart disease per 100,000 population in Florida and Palm Beach County from 2015 to 2019 is shown in the table and figure below. In Palm Beach County from 2015 to 2019, the coronary heart disease hospitalization rate decreased from 237.9 per 100,000 to 215.6 per 100,000, respectively. This declining trend for the county mirrors a similar trend at the state level.

There is no Healthy People 2030 national target specific to reducing the coronary heart disease hospitalization rate.

Table 152: Age-Adjusted Hospitalization from or With Coronary Heart Disease, Rate Per 100,000 Population, Palm Beach County and Florida, 2015-2019

Year	Palm Beach County		Florida

Age-Adjusted Hospitalization from or with Coronary Heart Disease, By Race

Research shows that the incidence of coronary heart disease is declining in the United States. However, the rate of decline for Black Americans has lagged in comparison to White Americans.¹²² The table and figure below show the rate of hospitalizations from or with coronary heart disease by race per 100,000 population. The coronary heart disease rates among Black and White residents decreased overall from 2015 to 2019. However, Black residents consistently had a hospitalization rate higher than White residents during this timeframe. In 2019, the rate among Black residents was 230.3 per 100,000 population, while the rate among White residents was 190.4 per 100,000 population.

Age-Adjusted Hospitalization from or with Coronary Heart Disease, By Ethnicity

The table and figure below show the rate of hospitalizations from or with coronary heart disease by ethnicity per 100,000 population in Palm Beach County and Florida from 2015 to 2019. During this time frame, the rate of hospitalization decreased overall among Hispanics and non-Hispanics in Palm Beach County and Florida. However, the coronary heart disease rate was higher among non-Hispanics compared to Hispanics every year reported. Most recently in 2019, the hospitalization rate was 215.8 per 100,000 population among non-Hispanics and 192.1 among Hispanics.

Table 154: Age-Adjusted Hospitalization from or With Coronary Heart Disease, Rate Per 100,000 Population, By Ethnicity, Palm Beach County and Florida, 2015-2019

Adults Who Have Ever Been Told They Had Angina or Coronary Heart Disease

Angina is a type of chest pain caused by reduced blood flow to the heart. The most common cause of reduced blood flow to your heart is coronary heart disease, which occurs when your coronary arteries become narrowed by fatty deposits called plaques.¹²³

The table and figure below show the percentage of adults who have ever been told they had angina or coronary heart disease in Palm Beach and Florida in 2013, 2016, and 2019. The percentage of adults who have ever been told they had angina or coronary heart disease declined from 2013 (6.3%) to 2019 (5.0%) in Palm Beach County. However, the percentage of adults in Palm Beach County was higher than Florida each year reported.

There is no Healthy People 2030 national target specific to the percent of adults who have ever been told they had angina or coronary heart disease.

Table 155: Adults Who Have Ever Been Told They Had Angina or Coronary Heart Disease, Palm Beach County and Florida, 2013-2019

Year	Palm Beach County	Florida
2013	6.3%	5.0%
2016	6.1%	4.7%
2019	5.0%	4.7%

Adults Who Have Ever Been Told They Had Angina or Coronary Heart Disease, By Race and Ethnicity

As previously mentioned, it is important to look at coronary heart disease incidence rates by race and ethnicity to identify disparities. The table and figure below show the percent of adults who have ever been told they had angina or coronary heart disease by race and ethnicity in Palm Beach County and Florida in 2013, 2016, and 2019. In Palm Beach County, the percentage of adults ever told that they had angina or coronary heart disease steadily declined from 2013 to 2019 among non-Hispanic Whites. The percentage of non-Hispanic Black adults in Palm Beach County increased from 2013 (3.2%) to 2016 (7.4%), then declined in 2019 (5.2%). The percentage of Hispanic adults in Palm Beach County declined sharply from 2013 (6.7%) to 2016 (0.1%) and increased slightly in 2019 (0.6%). In 2019, this percentage was highest among non-Hispanic Whites (6.9%) compared to non-Hispanic Black (5.2%) and Hispanics (0.6%). This trend for the county was similar to the trend in the state.

Table 156: Adults Who Have Ever Been Told They Had Angina or Coronary Heart Disease, By Race and Ethnicity, Palm Beach County and Florida, 2013-2019

Year	Palm Beach County			Florida		
	Non-Hispanic White	Non-Hispanic Black	Hispanic	Non-Hispanic White	Non-Hispanic Black	Hispanic

DRAFT

Congestive Heart Failure

Age-Adjusted Hospitalizations from Congestive Heart Failure

Heart failure is a condition that develops when the heart doesn't pump enough blood and oxygen to support other organs in the body. This can happen if the heart can't fill up with enough blood. It can also happen when your heart is too weak to pump properly. Heart failure can develop suddenly or over time as your heart gets weaker. Common causes of heart failure include coronary heart disease, high blood pressure, and diabetes.^{124, 125}

The table and figure below show the age-adjusted hospitalization rates from congestive heart failure per 100,000 population for Palm Beach County and Florida from 2015 to 2019. During this time frame, the rate increased in Palm Beach County from 832.2 per 100,000 population in 2015 to 960.9 per 100,000 population in 2019. Each year reported, the Palm Beach County rate was lower than the state rate.

The Healthy People 2030 national target is to reduce the hospitalizations from heart failures to 355.2 per 100,000 population.¹²⁶ In 2019, congestive heart failure hospitalization rates were nearly three times higher in Palm Beach County (960.9 per 100,000) than the national target.¹²⁷

Table 157: Age-Adjusted Hospitalizations from Congestive Heart Failure, Rate Per 100,000 Population, Palm Beach County and Florida, 2015-2019

Year	Palm Beach County		Florida	
	Count	Rate	Count	Rate
2015	20,378	832.2	321,177	1,144.7

Age-Adjusted Hospitalizations from Congestive Heart Failure, By Race

The table and figure below show the congestive heart failure hospitalization rate per 100,000 population by race for Palm Beach County and Florida from 2015 to 2019. From 2016 to 2019, congestive heart failure hospitalization rates steadily increased among Whites and Blacks in Palm Beach County. However, the rate among Blacks was much higher each year during this timeframe. In 2019, the hospitalization rate was more than double among Blacks (1,623.6 per 100,000) compared to Whites (777.3 per 100,000) in Palm Beach County. Additionally, Palm Beach County White and Black rates were lower than the state rates each year reported.

Age-Adjusted Hospitalizations from Congestive Heart Failure, By Ethnicity

The table and figure below show the age-adjusted hospitalization rate per 100,000 population by ethnicity for Palm Beach County and Florida from 2015 to 2019. The hospitalization rate increased overall among both the Hispanic and non-Hispanic populations in Palm Beach County during this timeframe. However, the rate was higher among the non-Hispanic population every year reported. In 2019 in Palm Beach County, the rate was 978.7 per 100,000 among non-Hispanics and 821.6 per 100,000 among Hispanics.

Cancer

Cancer, also called malignant neoplasm, is a class of diseases in which a cell or a group of cells display uncontrolled growth (division beyond the normal limits), invasion (intrusion on and destruction of adjacent tissues), and sometimes metastasis (spread to other locations in the body). Normally, human cells grow and divide to form new cells as the body needs them. When cells grow old or become damaged, they die, and new cells take their place.¹²⁸ However, when cancer develops this process breaks down. As cells become more abnormal, old, or damaged, cells survive when they should die, and new cells form when they are not needed. These extra cells can divide without stopping and may form growths called tumors. Cancerous tumors are malignant, which means they can invade nearby tissues.

Complex and interrelated factors contribute to the risk of developing cancer and to the observed disparities in cancer incidence and death among racial, ethnic, and underserved groups. The most obvious factors are a lack of health care coverage and low socioeconomic status.¹²⁹ Those who are living in poverty and are medically underserved may exhibit higher rates of behavioral risk factors for cancer, such as tobacco smoking, physical activity, obesity, and excessive alcohol intake, and lower rates of breastfeeding.¹³⁰ Moreover, those who live in poverty may experience higher rates of exposure to environmental risk factors such as cancer-causing substances in motor vehicle exhaust in dense urban neighborhoods. In addition, even among people of a higher socioeconomic status, certain racial and ethnic groups may experience cancer disparities. These differences may reflect cultural differences such as distrust in the health care system, fatalistic attitudes about cancer, or apprehension or embarrassment about having certain kinds of medical procedures.

Age-adjusted Cancer Incidence

The table and figure below show the age-adjusted cancer incidence rate per 100,000 population in Palm Beach and Florida from 2014 to 2018. During this timeframe, this rate decreased from 426.1 per 100,000 in 2014 to 404.4 per 100,000 in 2018 in Palm Beach County. In 2018, the cancer incidence rate in Palm Beach County was 404.4 per 100,000 compared to 454.3 per 100,000 for the state overall.

There is no Healthy People 2030 national target specific to reducing cancer incidence rate.

Age-Adjusted Cancer Incidence, By Race

According to the National Cancer Institute, in the United States overall cancer rates have remained higher among Black Americans compared to other racial groups. This disparity largely reflects a combination of multiple interconnected factors including tumor biology, stage at diagnosis, receipt of timely and effective treatment, and systemic discrimination in cancer care delivery. Black Americans and individuals of lower socioeconomic groups in general are also more likely to have a higher exposure to some cancer risk factors, including limited access to healthy food, safe places for physical activity, and evidence-based cancer preventive services.¹³¹

The table and figure below show the age-adjusted cancer incidence rate per 100,000 population by race for Palm Beach County and Florida from 2014 to 2018. During this timeframe, the cancer incidence rate decreased overall among White and Black residents in the county. However, the rate was higher among White residents than Black residents each year reported. In 2018, the rate was 405.2 per 100,000 among White residents in Palm Beach County and 326.4 per 100,000 among Black residents.

Age-Adjusted Hospitalizations from Congestive Heart Failure, By Ethnicity

The table and figure below show the age-adjusted cancer incidence rate per 100,000 population by ethnicity in Palm Beach County and Florida from 2014 to 2018. The rate fluctuated among Hispanics and non-Hispanics in Palm Beach County, and ultimately declined from 2016 to 2018 in both groups. The Hispanic and non-Hispanic rate in Palm Beach County was lower than the state rates each year reported. In 2018, the rate in Palm beach County was 263.9 per 100,000 among the Hispanic population compared to 430.4 per 100,000 among the non-Hispanic population.

Colorectal Cancer

Colorectal cancer starts in the colon or the rectum. These cancers can be called colon cancer or rectal cancer, depending on where they start. Colon cancer and rectal cancer are often grouped together because they have many common features.

According to the 2020 Colorectal Cancer Statistics, colorectal cancer was the second most common cause of cancer death in the United States. It was estimated that in 2020, approximately 147,950 individuals would be diagnosed with colorectal cancer and 53,200 would die from the disease. This included 17,930 cases and 3,640 deaths among individuals ages younger than 50 years. The incidence rate between 2012 and 2016 ranged from 30 per 100,000 population in Asian/Pacific Islanders to 45.7 in Blacks and 89 in Alaska Natives.¹³²

Age-Adjusted Colorectal Cancer Incidence

The table and figure below show the colorectal cancer incidence rate per 100,000 population in Palm Beach County and Florida from 2014 to 2018. During this timeframe, the rate fluctuated but remained lower than the rate in the state. In 2018, the rate was 30.3 per 100,000 population in Palm Beach and 35.1 per 100,000 in the state. Similar to the cancer incidence indicator, there is no Healthy People 2030 national target related to reducing colorectal cancer incidence.

Age-Adjusted Colorectal Cancer Incidence, By Race

The table and figure below show the colorectal cancer incidence rate per 100,000 population by race in Palm Beach County and Florida from 2014 to 2018. During this time frame, the rate fluctuated among both White and Black residents in Palm Beach County. However, rates were slightly higher among Black residents each year reported. In 2019, the rate among Black residents was 33.8 per 100,000 population compared to 28.7 per 100,000 population among White residents.

Breast Cancer

According to the Centers for Disease Control and Prevention, breast cancer is the second most common cancer among women in the United States. Deaths from breast cancer have declined over time. However, breast cancer remains the second leading cause of cancer death among women overall and the leading cause of cancer death among Hispanic women.¹³³

Each year in the United States, approximately 255,000 cases of breast cancer are diagnosed in women and approximately 2,300 in men. Additionally, approximately 42,000 women and 500 men in the U.S. die each year from breast cancer. Black women have a higher breast cancer death rate than White women.¹³⁴

Age-Adjusted Breast Cancer Incidence

The table and figure below show the age-adjusted breast cancer incidence rate in Palm Beach County and Florida from 2014 to 2018. During this timeframe the rate fluctuated in Palm Beach County and Florida. However, the county rate was consistently higher than the state rate each year reported.

There is no Healthy People 2030 national target for reducing the breast cancer incidence rate.

Age-Adjusted Breast Cancer Incidence, By Race

The table and figure below show the age-adjusted breast cancer incidence rate by race in Palm Beach County and Florida from 2014 to 2018. The breast cancer incidence rate was higher among White residents compared to Black residents in Palm Beach County each year during this time frame. In Palm Beach County in 2018, the rate was 126.9 per 100,000 among White residents compared to 106.3 per 100,000 among Black residents. The rate among White Palm Beach County residents was also higher than the rate among White Florida residents each year from 2014 to 2018.

Age-Adjusted Breast Cancer Incidence, By Ethnicity

As previously mentioned, breast cancer is the leading cause of death among Hispanic women in the United States. The table and figure below show the age-adjusted breast cancer incidence rate by ethnicity for Palm Beach County and Florida from 2014 to 2018. The rate fluctuated among Hispanic and non-Hispanic residents in Palm Beach County throughout this time period, but ultimately increased from 74.1 per 100,000 in 2017 to 91.4 per 100,000 in 2018 among Hispanic residents and from 132.1 per 100,000 in 2017 to 136.0 per 100,000 in 2018 among non-Hispanic residents. Additionally, the rate was much higher among the non-Hispanic residents each year from 2014 to 2018.

Table 168: Age-Adjusted Breast Cancer Incidence, Rate Per 100,000, By Ethnicity, Palm Beach County and Florida, 2014-2018

Year	Palm Beach County				Florida			
	Hispanic		Non-Hispanic		Hispanic		Non-Hispanic

Cervical Cancer

When cancer cells invade the cervix, it is called cervical cancer. All women are at risk for cervical cancer. However, it occurs most often in women over age 30. Cervical cancer used to be the leading cause of cancer death for women in the United States. However, in the past 40 years, the number of cases of cervical cancer and the number of deaths from cervical cancer have decreased significantly. This decline is largely the result of women getting regular Pap tests, which is a screening test that can detect pre-cancerous cells in the cervix.¹³⁵ In 2018, the cervical cancer incidence rate among women in the United States was 7.5 per 100,000. When racial and ethnic disparities were examined, the rate was highest among Black women and Hispanic women with rates of 8.3 per 100,000 and 9.3 per 100,000, respectively.¹³⁶

Age-Adjusted Cervical Cancer Incidence

The table and figure below show the cervical cancer incidence rate per 100,000 female population in Palm Beach County and Florida from 2014 to 2018. During this timeframe, the rate in the county fluctuated and ultimately decreased from 8.4 per 100,000 in 2017 to 7.1 per 100,000 in 2018. Additionally, the county rate was lower than the state rate each year from 2014 to 2018. In 2018, the rate in Palm Beach County was 7.1 per 100,000 compared to 8.6 per 100,000 in the state overall.

There is no Healthy People 2030 national target specific to reducing the cervical cancer incidence rate among females.

Table 169: Age-Adjusted Cervical Cancer Incidence, Rate Per 100,000 Female Population, Palm Beach County and Florida, 2014-2018

Year	Palm Beach County		Florida	
	Count	Rate	Count	Rate

Age-Adjusted Cervical Cancer Incidence, By Race

As mentioned above, the cervical cancer incidence rate has historically been higher among Black women compared to women of other races nationwide, so it is important to look at the incidence rate by race at the county and state level. The table and figure below show the cervical cancer incidence rate per 100,000 female population by race in Palm Beach County and Florida from 2014 to 2018. As seen below, the rate was higher among Black female residents in the county and state each year during this time frame. In 2018, the rate among Black female residents (12.5 per 100,000) in the county was over double the rate among White female residents (6.0 per 100,000).

Table 170: Age-Adjusted Cervical Cancer Incidence, Rate Per 100,000 Female Population, By Race, Palm Beach County and Florida, 2014-2018

Prostate Cancer

Other than skin cancer, prostate cancer is the most common cancer among American men. The most common risk factor for prostate cancer is age. The older a man is, the greater the risk for prostate cancer. In addition, some men are at an increased risk for getting or dying from prostate cancer if they have a family history of prostate cancer or if they are Black American. Compared to other men, Black American men are more likely to get prostate cancer and are twice as likely to die from prostate cancer.¹³⁷

Age-Adjusted Prostate Cancer Incidence

The following table and figure show the prostate cancer incidence rate per 100,000 male population in Palm Beach County and Florida from 2014 to 2018. During this timeframe, the rate in the county and Florida fluctuated. Most recently in Palm Beach County, the incidence rate decreased from 99.6 per 100,000 in 2017 to 76.4 per 100,000 in 2018. While the rate in Palm Beach County was higher than the state rate each year from 2014 to 2017, the county rate in 2018 of 76.4 per 100,000 was lower than the state rate of 89.1 per 100,000.

There is no Healthy People 2030 national target specific to prostate cancer incidence rate in males.

Age-Adjusted Prostate Cancer Incidence, By Race

The table and graph below look at the incidence rate of prostate cancer per 100,000 male population by race in Palm Beach County and Florida from 2014 to 2018. The incidence rate was higher among Black residents compared to White residents every year during this timeframe in Palm Beach County and Florida. Prostate cancer incidence rates decreased among White residents from 89.3 per 100,000 in 2017 to 69.9 per 100,000 population in 2018 and among Black residents from 152.1 per 100,000 in 2017 to 92.5 per 100,000 in 2018.

Age-Adjusted Prostate Cancer Incidence, By Ethnicity

This table and figure look at the prostate cancer incidence rate per 100,000 male population by ethnicity in Palm Beach County and Florida from 2014 to 2018. In Palm Beach County, the prostate cancer incidence rate decreased among the Hispanic population overall from 126.7 per 100,000 in 2014 to 68.0 per 100,000 in 2018. The rate among the non-Hispanic population fluctuated during this time frame, but ultimately decreased from 101.0 per 100,000 population in 2016 to 77.9 per 100,000 in 2018. Additionally, the rate among the Hispanic population was higher in 2014 and 2015, while the rate among the non-Hispanic Population was higher from 2016 to 2018.

Table 173: Age-Adjusted Prostate Cancer Incidence, Rate Per 100,000 Population, By Ethnicity, Palm Beach County and Florida, 2014-2018

Enteric Disease

Enteric bacteria, including *E. coli* and *Salmonella*, are often acquired via contaminated food or water sources.¹³⁸ Common symptoms include diarrhea, nausea, and vomiting. The prevalence of enteric diseases is observed in order to prevent future outbreaks.

This table below shows the enteric disease rate in Palm Beach County and Florida from 2015 to 2019. The rate of enteric disease in Palm Beach County was similar to the Florida rate every year from 2015 to 2019. Moreover, the rate in Palm Beach County and Florida increased from 2017 to 2019. The most recent rate of enteric disease reported in Palm Beach County was 77.6 per 100,00 population.

Healthy People 2030 has not set a national target for enteric diseases.

Table 174: Enteric Disease, Palm Beach County and Florida, 2015-2019

Year	Palm Beach County		Florida

Overweight and Obesity

According to the World Health Organization, being overweight or obese is defined as having abnormal or excessive fat accumulation that impairs health. Both are complex, chronic health issues that are largely preventable through lifestyle modifications and are impacted by a number of behavioral, social, environmental, and even genetic factors. Body mass index (BMI) is a screening tool used to classify overweight and obesity status by using a person's weight and height. For adults, a BMI of 25 to 29 is categorized as overweight and 30 or higher is obese.¹³⁹

Being overweight or obese is a risk factor for other serious mental and physical health issues, including COVID-19.¹⁴⁰ Overweight or obese individuals also have an economic burden on our society through direct medical costs and indirect costs, such as absenteeism and low productivity.¹⁴¹

Childhood overweight and obesity is also a significant issue today, particularly because children who are overweight or obese are more likely to be overweight or obese as adults and have symptoms as adults that are more severe. These symptoms include, but are not limited to, high blood pressure, high cholesterol, insulin resistance, breathing problems, joint problems, anxiety, and depression.¹⁴² According to the Centers for Disease Control and Prevention, 1 in 5 children and adolescents have obesity nationwide.¹⁴³

The Healthy People 2030 national target specific to adults is to reduce the proportion of adults with obesity ages 20 and over to 36.0%.¹⁴⁴ The Healthy People 2030 national target specific to children is to reduce the proportion of children and adolescents ages 2 to 19 years old with obesity to 15.5%.¹⁴⁵

Percent of Middle School Students with BMI at or Above 95th Percentile

The table below shows the percent of middle school students with a BMI at or above the 95th percentile in Palm Beach County and Florida for 2012, 2014, 2016, 2018, and 2020. In Palm Beach County, there was a steady increase from 2016 (11.3%) to 2020 (13.0%).

Percent of High School Students with BMI at or Above 95th Percentile

The following table shows the percent of high school students with a BMI at or above the 95th percentile in Palm Beach County and Florida in 2012, 2014, 2016, 2018, and 2020. In Palm Beach County, the percentage declined from 2014 (12.0%) to 2016 (9.5%), then increased in 2018 (12.4%) and 2020 (12.8%). Additionally, the percentage of Palm Beach County high school students with a BMI at or above the 95th percentile was lower than percentage of Florida high school students overall each year reported.

Table 176: Percent of High School Students with BMI at or Above 95th Percentile, Palm Beach County and Florida, 2012, 2014, 2016, 2018, 2020

Year	Palm Beach County	Florida

Percent of Middle and High School Students with BMI at or Above 95th Percentile, By Race

The table and graph below show the percentage of middle and high school students with a BMI at or above the 95th percentile by race in 2012, 2014, 2016, 2018, and 2020. For each year reported, Non-Hispanic Black and Hispanic students had much higher rates than Non-Hispanic Whites in Palm Beach County and Florida. The rates for Non-Hispanic White and Non-Hispanic Black students increased in 2016, 2018, and 2020. The highest rate for the county was found among Non-Hispanic Black students in 2020 at 17.2%.

Regarding the Healthy People 2030 national target of reducing the proportion of children and adolescents with obesity to 15.5%, Palm Beach County is meeting this goal for middle and high school students.¹⁴⁶ However, looking at the rate of middle and high school students who are obese broken down by race, in both 2018 (16.3%) and 2020 (17.2%) the rate for Non-Hispanic Black students in Palm Beach County exceeded this target.

Underweight, Healthy Weight, Overweight, and Obese Students in First, Third, and Sixth Grades

This table and graph show Palm Beach County students in first, third, and sixth grades that were underweight, a healthy weight, and overweight or obese during the 2020 – 2021 school year. As the grade increased, the percentage of overweight or obese students increased and the percentage of healthy weight students decreased. Most notably, the percentage of sixth graders who were overweight or obese was close to half of the entire grade at 45.98%.

Table 178: Underweight, Healthy Weight, and Overweight or Obese students in First, Third, and Sixth Grades, Palm Beach County, School Year 2020-2021

Overweight or Obese First and Third Graders in Palm Beach County, By School

The table below shows the number of overweight or obese students in first, third and sixth grades in Palm Beach County during the 2021 – 2021 school year. The full list by school can be found in Appendix C (first through third grade) and Appendix D (sixth grade). As a note, many students were not screened during the 2020 – 2021 school year due to the COVID-19 pandemic which resulted in a virtual learning environment. Some schools listed below offered virtual students the opportunity to be screened on campus, but screenings were voluntary. Additionally, this data was collected from the Health Care District of Palm Beach County.

Percent of Adults who are Overweight

The following table shows the percentage of adults who were overweight in Palm Beach County and Florida in 2007, 2010, 2013, 2016 and 2019. While the percentage of overweight adults in Palm Beach County declined each year reported from 2007 to 2016, there was an increase from 2016 (32.1%) to 2019 (35.2%).

Table 180: Percent of Adults Who Are Overweight, Palm Beach County and Florida, 2007, 2010, 2013, 2016, 2019

Year	Palm Beach County	Florida
2007	43.1%	38.0%
2010	41.8%	37.8%
2013	40.2%	36.4%
2016	32.1%	35.8%
2019	35.2%	37.6%

Percent of Adults who are Overweight, By Race and Ethnicity

This table and graph show the percentage of adults who were overweight by race and ethnicity in Palm Beach County and Florida in 2007, 2010, 2013, 2016 and 2019. The percentage of adults of all races in Palm Beach County and Florida fluctuated from 2007 to 2019. In 2019, Non-Hispanic Black adults had the highest rate in Palm Beach County at 46.7%, which was much higher than the Florida rate of 35.1%.

Table 181: Percent of Adults Who Are Overweight, By Race and Ethnicity, Palm Beach County and Florida, 2007, 2010, 2013, 2016, 2019

Percent of Adults who are Obese

The table below shows the percentage of adults who were obese in Palm Beach County and Florida in 2007, 2010, 2013, and 2016. The percentage of Palm Beach County adults increased steadily from 2007 to 2019. In 2019, almost a quarter (24.3%) of all reported adults were obese in Palm Beach County. This was slightly below the state rate of 27.0%.

As previously mentioned, the Healthy People 2030 national target is to reduce the proportion of adults ages 20 and over with obesity to 36.0%.¹⁴⁷ This table below shows the percentage of obese adults ages 18 and over. Palm Beach County reported rates that were below the 36.0% threshold each year reported.

Table 182: Percent of Adults Who Are Obese, Palm Beach County and Florida, 2007, 2010, 2013, 2016, 2019

Year	Palm Beach County	Florida
2007	14.5%	24.1%
2010	19.4%	27.2%
2013	19.9%	26.4%
2016	20.8%	27.4%
2019	24.3%	27.0%

Figure 93: Percent of Adults Who Are Obese, Palm Beach County and Florida, 2007, 2010, 2013, 2016, 2019

Percent of Adults who are Obese, By Race and Ethnicity

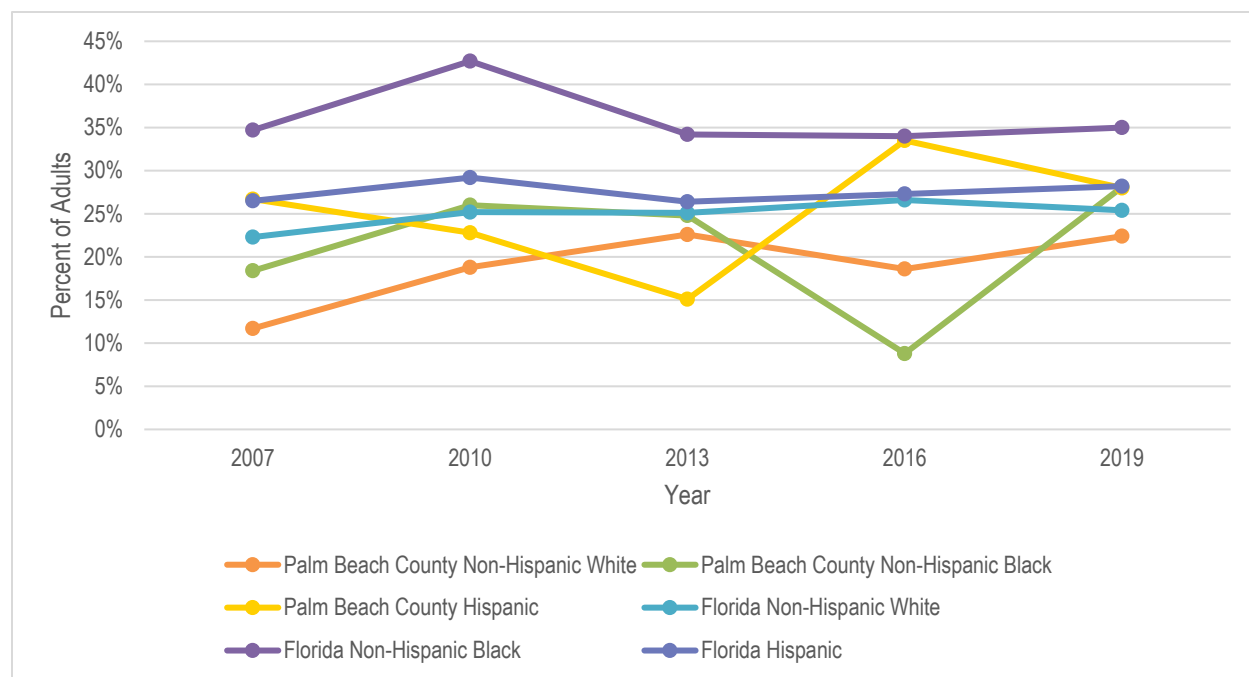

The following table and graph show the percentage of adults who were obese in 2007, 2010, 2013, 2016, and 2019 in Palm Beach County and Florida by race and ethnicity. Rates fluctuated for all races in Palm Beach County across all years. In 2019, Non-Hispanic Black adults (28.1%) and Hispanic adults (28.0%) had much higher rates of obesity than Non-Hispanic White adults (22.4%) in Palm Beach County. However, the Palm Beach County rates were slightly lower than the Florida rates for all races in 2019.

Infectious Disease

Infectious diseases are illnesses caused by viruses, bacteria, fungi, or parasites and can spread from person-to-person through direct physical contact, droplets in the air, or insects or ticks. There are a wide range of infectious diseases, and signs, symptoms, and treatment are dependent upon the disease.¹⁴⁸

Tuberculosis

The table below shows the rate of tuberculosis cases per 100,000 population in Palm Beach County and Florida from 2016 to 2020. While the rate in Palm Beach County declined from 2016 (3.8 per 100,000) to 2018 (2.4 per 100,000), there was a slight increase in 2019 (2.9 per 100,000). In 2020, the Palm Beach County rate decreased to 2.2 per 100,000 population, which was slightly higher than the Florida rate of 1.9 per 100,000 population.

The Healthy People 2030 national target is to reduce the rate of new tuberculosis cases to 1.4 per 100,000 population.¹⁴⁹ As demonstrated in the table below, both Palm Beach County and Florida rates are not yet meeting that target.

Table 184: Tuberculosis Cases, Palm Beach County and Florida, 2016-2020

Year	Palm Beach County		Florida	
	Count	Rate	Count	Rate
2016	53	3.8	639	3.2
2017	44	3.1	549	2.7
2018	35	2.4	591	2.8
2019	42	2.9	558	2.6
2020	33	2.2	412	1.9

Total Reportable Disease Cases

The following table shows the rate of reportable disease cases per 100,000 population in Palm Beach County and Florida from 2016 to 2020. In Palm Beach County, the rate fluctuated but decreased overall from 2017 (285.7 per 100,000 population) to 2020 (188.3 per 100,000 population).

There is no Healthy People 2030 national target specific to this health indicator.

Table 185: Total Reportable Disease Cases, Palm Beach County and Florida, 2016-2020

Year	Palm Beach County		Florida	
	Count	Rate	Count	Rate
2016	3,820	273.8	54,829	271.0
2017	4,032	285.7	56,811	276.4
2018	3,610	250.3	55,281	263.8
2019	3,664	251.2	56,391	265.1
2020	2,768	188.3	40,025	185.0

Note: Data presented here are from Merlin, Florida's web-based reportable disease surveillance system. Data in this report are aggregated by the date the case was reported to the Bureau of Epidemiology, Florida Department of Health. Cases are assigned to Florida counties based on the county of residence at the time of the disease identification, regardless of where they became ill or were hospitalized, diagnosed, or exposed. Disease reporting is an ongoing process. Numbers displayed are preliminary and will fluctuate up or down over time as case reports undergo further investigation and validation. Counts include confirmed and probable cases. Summaries of reportable disease data are produced weekly, monthly, and annually and are located on the Bureau of Epidemiology's [Data and Publication page](#). More detailed information on interpreting data can be found in the Introduction Section of the [Annual Morbidity Statistics Reports](#) (AMSR) and final disease counts are found in the AMSR. For questions, please contact the Bureau of Epidemiology at (850) 245-4401.

HIV

HIV Diagnoses

The following table shows the rate of HIV diagnoses per 100,000 population in Palm Beach County and Florida from 2015 to 2019. From 2017 to 2019, the rate declined in both Palm Beach County and the state. In 2019, the rate of HIV diagnoses was 16.9 per 100,000 in Palm Beach County and 21.4 per 100,000 population in the state.

The Healthy People 2030 national target is to reduce the number of new HIV diagnoses among persons ages 13 years and over to 3,835.¹⁵⁰ While the data presented below shows the number of new HIV diagnoses for all ages, any reduction in new diagnoses is progress towards a healthier community.

Table 186: HIV Diagnoses, Palm Beach County and Florida, 2015-2019

Year	Palm Beach County		Florida	
	Count	Rate	Count	Rate
2015	282	20.4	4,690	23.6

HIV Diagnoses, By Race

The table and graph below show the rate of HIV diagnoses per 100,000 population by race in Palm Beach County and Florida from 2015 to 2019. As displayed in the graph, there is a major disparity between the Non-Hispanic White rate and Non-Hispanic Black rate in Palm Beach County and Florida each year reported. In Palm Beach County, the Non-Hispanic White rate increased from 2016 (8.4 per 100,000) to 2018 (9.0 per 100,000), then declined in 2019 (7.5 per 100,000). The Non-Hispanic Black rate in Palm Beach County declined steadily from 64.7 per 100,000 population in 2016 to 45.0 per 100,000 population in 2019. In 2019, the Palm Beach County Non-Hispanic White and Non-Hispanic Black rate were both lower than the state rates.

Table 187: HIV Diagnoses, By Race, Palm Beach County and Florida, 2015-2019

Year	Palm Beach County				Florida			
	Non-Hispanic White		Non-Hispanic Black		Non-Hispanic White		Non-Hispanic Black

HIV Diagnoses, By Ethnicity

This table shows the rate of new HIV diagnoses per 100,000 population by ethnicity in Palm Beach County and Florida from 2015 to 2019. The rate among non-Hispanic residents in Palm Beach County declined from 2016 (21.5 per 100,000) to 2019 (16.5 per 100,000). The rate among Hispanic residents in Palm Beach County fluctuated, with an increase most recently from 17.7 per 100,000 population in 2018 to 18.5 per 100,000 population in 2019. Additionally, in 2019, the Palm Beach County Hispanic (18.5 per 100,000) and non-Hispanic (16.5 per 100,000) rates among residents were both lower than the state rates among Hispanic (28.9 per 100,000) and non-Hispanic (18.8 per 100,000) residents.

Figure 99: HIV Diagnoses, By Ethnicity, Palm Beach County and Florida, 2015-2019

HIV Testing

HIV testing is important because it can lead to early diagnosis and treatment. Crucially, people that don't know they have the disease are more likely to spread it.

Adults Less than 65 Years of Age who Have Ever Been Tested for HIV

The following table shows the percentage of adults under 65 years of age who have ever been tested for HIV in Palm Beach County and Florida in 2007, 2010, 2013, 2016, and 2019. In the county and state, the rate increased in 2013, 2016, and 2019. However, the Palm Beach County rate was lower than the Florida rate each year reported except 2007.

There is no Healthy People 2030 national target associated with this health indicator.

Adults Less than 65 Years of Age Who Have Ever Been Tested for HIV, By Race and Ethnicity

The table below shows the percentage of adults under 65 years of age who have ever been tested for HIV in Palm Beach County and Florida in 2007, 2010, 2013, 2016, and 2019 by race and ethnicity. From 2016 to 2019 in Palm Beach County, the rate among non-Hispanic White residents increased from 47.9% to 49.0% and the rate among non-Hispanic Black residents also increased from 45.4% to 75.0%. During this same time period, the Hispanic rate decreased from 71.7% to 52.7%. Notably, in 2019, the non-Hispanic Black rate of 75.0% was higher than the state rate of 73.5%.

Adults Less than 65 Years of Age Who Had an HIV Test in the Past 12 Months

This table shows the percentage of adults under 65 years of age who had an HIV test in the past 12 months in Palm Beach County and Florida in 2007, 2010, 2013, and 2016. In the years reported since 2010, the percentage increased steadily in both Palm Beach County and Florida. Most recently in 2016, the percentage of adults less than 65 years of age who had an HIV test in the past 12 months was 21.0% in Palm Beach County and 19.7% in the state.

Adults Less Than 65 Years of Age Who Had an HIV Test in the Past 12 Months, By Race and Ethnicity

This table shows the percentage of adults under 65 years of age who had an HIV test in the past 12 months in Palm Beach County and Florida in 2007, 2010, 2013, and 2016 by race and ethnicity. In 2016, the percentages for non-Hispanic Black (26.7%) and Hispanic (23.6%) residents were the highest among all demographic groups in Palm Beach County. However, both percentages were lower than the percentages among Florida non-Hispanic Black (36.1%) and Hispanic (24.1%) residents.

Acquired Immunodeficiency Syndrome (AIDS)

AIDS Diagnoses

The following table shows the rate of new AIDS diagnoses per 100,000 population in Palm Beach County and Florida from 2015 to 2019. The rate in Palm Beach County fluctuated from 2015 to 2019. The rates among Palm Beach County residents in 2018 (6.7 per 100,000) and 2019 (7.6 per 100,000) were lower than the rates among Florida residents in 2018 (9.1 per 100,000) and 2019 (8.9 per 100,000) overall.

There is no Healthy People 2030 national target associated with this health indicator.

AIDS Diagnoses, By Race

The following table and graph show the rate of new AIDS diagnoses per 100,000 population in Palm Beach County and Florida from 2015 to 2019 by race. While the non-Hispanic White and non-Hispanic Black rates both fluctuated in

Palm Beach County during this timeframe, the graph shows a general downward trend for all races listed at the county and state level. Additionally, there was a large disparity between the non-Hispanic White and non-Hispanic Black rate each year in Palm Beach County and Florida. For example, in 2019, the rate of AIDS diagnoses among non-Hispanic White residents in Palm Beach County was 2.5 per 100,000 population and the rate of AIDS diagnoses among non-Hispanic Black residents was 24.7 per 100,000 population.

Sexually Transmitted Diseases/Infections

Gonorrhea, Chlamydia, and Infectious Syphilis Cases

The following table shows the rate of gonorrhea, chlamydia, and infectious syphilis cases in Palm Beach County and Florida from 2015 to 2019. In both Palm Beach County and Florida, the rate increased over this time period. The Palm Beach County rate was lower than the Florida rate for every year from 2015 to 2019. For example, the rate in 2019 among Palm Beach County residents was 182.6 per 100,000 population and the rate among Florida residents overall was 238.5 per 100,000.

There is no Healthy People 2030 national target associated with this health indicator.

DRAFT

Asthma

Asthma is a chronic lung disease that inflames and narrows the airways causing recurring attacks of symptoms, such as wheezing and coughing. Inflammation makes the airways sensitive to various allergens and irritants in the environment, including mold, dust mites, animal dander, pollen, diesel emissions, and tobacco smoke. This disease affects people of all ages but is one of the most common chronic diseases among children.¹⁵¹

Age-Adjusted Emergency Room Visits Due to Asthma

The table below shows the rate of emergency room visits due to asthma per 100,000 population for Palm Beach County and Florida from 2015 to 2019. During this timeframe, this rate decreased from 560.0 per 100,000 in 2015 to 411.4 per 100,000 in 2019 in Palm Beach County. The Palm Beach County rate was lower than the state rate each year reported.

The Healthy People 2030 national target is to reduce the rate of emergency room visits due to asthma to 44 per 10,000 persons ages five and older living with asthma.¹⁵²

Table 197: Age-Adjusted Emergency Room Visits Due to Asthma, Rate Per 100,000 Population, Palm Beach County and Florida, 2015-2019

Year	Palm Beach County		Florida

Age-Adjusted Emergency Room Visits Due to Asthma, By Race

The following table and graph show the rate of emergency room visits due to asthma per 100,000 population for Palm Beach County and Florida by race. Each year from 2015 to 2019, the rate of emergency room visits due to asthma among Black residents was at least three times higher than the rate among White residents in Palm Beach County. In 2019, the rate among Black residents was 827.6 per 100,000 compared to 224.0 per 100,000 among White residents.

Age-Adjusted Emergency Room Visits Due to Asthma, By Ethnicity

The table below shows the rate of emergency room visits due to asthma per 100,000 population for Palm Beach County and Florida by ethnicity from 2015 to 2019. During this timeframe, the rate decreased overall among both Hispanic and non-Hispanic residents in Palm Beach County. Most recently in 2019, the rate among Hispanic residents was 340.3 per 100,000 and the rate among non-Hispanic residents was 438.4 per 100,000.

Age-Adjusted Asthma Hospitalizations

The table and figure below show the age-adjusted rate of hospitalizations due to asthma per 100,000 population in Palm Beach County and Florida from 2015 to 2019. Over this time period, the rate steadily declined from 135.4 per 100,000 in 2015 to 74.4 per 100,000 in 2019 in Palm Beach County. However, the Palm Beach County rate was higher than the state rate each year reported.

There is no Healthy People 2030 national target specific to reducing the asthma hospitalization rate due to lack of baseline data. However, there is a Healthy People 2030 national objective to reduce hospitalizations due to asthma in people ages 5 to 64 years in general.¹⁵³

Age-Adjusted Asthma Hospitalizations, By Race

The table and figure below show the asthma hospitalization rate per 100,000 for Palm Beach County and Florida by race from 2015 to 2019. The rate declined among White residents from 94.8 per 100,000 in 2015 to 40.3 per 100,000 in 2019 and among Black residents from 239.6 per 100,000 in 2015 to 150.0 per 100,000 in 2019. Every year from 2015 to 2019, the rate among Black residents in the county was higher rate than the rate among Black residents in the state. The hospitalization rate among Black residents in Palm Beach County was also much higher than the rate among White residents in the county each year reported. In 2019, the rate among Black residents (150.0 per 100,000) in the county was over three times higher than the rate among White residents (40.3 per 100,000).

Age-Adjusted Asthma Hospitalizations, By Ethnicity

The table and figure below show the rate of asthma hospitalizations per 100,000 population for Palm Beach County and Florida by ethnicity from 2015 to 2019. Over this time period, the rate declined steadily among both Hispanic and non-Hispanic residents in the county. In 2019, the rate in Palm Beach County was 69.8 per 100,000 among Hispanic residents compared to 79.3 per 100,000 among non-Hispanic residents. Additionally, the Palm Beach County rate for both groups was higher compared to the state rate every year from 2015 to 2019.

Preventable Hospitalizations Among Population Under 65 from Asthma

The table below shows the rate of preventable hospitalizations due to asthma per 100,000 population under 65 years old in Palm Beach County and Florida from 2015 to 2019. During this timeframe, the rate decreased steadily in the county and the state overall. In 2019, this rate was 74.4 per 100,000 in Palm Beach County and 62.4 per 100,000 in Florida.

There is no Healthy People 2030 national target specific to preventable hospitalizations from asthma among populations under 65.

Stroke

There are two main types of strokes, ischemic and hemorrhagic. Ischemic strokes are caused by the blockage of a blood vessel. Hemorrhagic strokes are caused by a sudden bleeding in the brain. Both types of strokes can cause lasting brain damage, long-term disability, or death.

According to the Centers for Disease Control and Prevention, stroke is a leading cause of death for Americans, but the risk of having a stroke varies by race and ethnicity. Among Black Americans, the risk of having a first stroke is nearly twice as high as White Americans. Black Americans also have the highest rate of death due to stroke. Additionally, although death rates for stroke have declined for decades among all races and ethnicities, Hispanics have seen an increase in death rates since 2013.¹⁵⁴

Age-Adjusted Hospitalizations from Stroke

The table and figure below show the age-adjusted rate of hospitalization from stroke per 100,000 population for Palm Beach County and Florida from 2015 to 2019. Each year during this timeframe the hospitalization rate was lower in Palm Beach County than in the state. In 2019, the rate was 189.7 per 100,000 in Palm Beach County compared to 236.9 per 100,000 in the state overall. From 2018 to 2019, the rate of hospitalizations from stroke in Palm Beach County increased slightly from 184.5 per 100,000 to 189.7 per 100,000, respectively.

There is no Healthy People 2030 national target specific to hospitalizations from stroke.

Age-Adjusted Hospitalizations from Stroke, By Race

The table and figure below show the age-adjusted hospitalization rate from stroke per 100,000 population by race for Palm Beach County and Florida from 2015 to 2019. In Palm Beach County, the rate among Black residents was over double the rate among White residents in the county each year during this timeframe. The rate among White residents in the county decreased from 2015 (160.0 per 100,000) to 2018 (146.7 per 100,000), then slightly increased in 2019 (149.9 per 100,000). The rate among Black residents in the county also increased in recent years from 307.0 per 100,000 population in 2017 to 331.2 per 100,000 in 2019.

Age-Adjusted Hospitalizations from Stroke, By Ethnicity

The table and figure below show the age-adjusted hospitalization rate from stroke per 100,000 population by ethnicity in Palm Beach County and Florida from 2015 to 2019. In both the county and state, the rate was highest among the non-Hispanic population each year reported. From 2018 to 2019, the rate among the Hispanic population in Palm Beach County decreased from 152.6 per 100,000 to 139.1 per 100,000 population, respectively. Alternatively, the rate among the non-Hispanic population increased from 184.7 per 100,000 in 2018 to 193.2 per 100,000 population in 2019.

Adults Who Have Ever Been Told They Had A Stroke

This table and figure show the percentage of adults who had ever been told they had a stroke in Palm Beach County and Florida in 2013, 2016, and 2019. The percentage of adults in Palm Beach County who had ever been told they had a stroke slightly increased from 2013 (2.2%) to 2019 (3.2%). This percentage was slightly lower than the state each year reported.

There is no Healthy People 2030 national target specific to reducing the percentage of adults who have ever been told they had a stroke.

Adults Who Have Ever Been Told They Had a Stroke, By Race and Ethnicity

The table and figure below show the percentage of adults who have ever been told they had a stroke for Palm Beach County and Florida by race and ethnicity in 2013, 2016, and 2019. During this timeframe, the percentage of adults in Palm Beach County fluctuated for the non-Hispanic White and Hispanic populations and increased for the non-Hispanic Black population. Each year reported, the county rate was lower than the state rate. Most recently in 2019 in Palm Beach County, the percentage was highest among non-Hispanic Black residents (4.3%), compared to non-Hispanic White (3.8%) and Hispanic (1.2%) residents.

Table 208: Adults Who Have Ever Been Told They Had A Stroke, By Race and Ethnicity, Palm Beach County and Florida, 2013-2019

Unintentional Injury

Hospitalizations for Firearm Injuries

Firearm injury is defined as a gunshot wound or penetrating injury from a weapon that uses a powder charge to fire a projectile. This definition includes gunshot injuries from handguns, rifles, and shotguns. This does not include injuries from air- and gas-powered guns, such as pellet guns.¹⁵⁵

In 2019, there were 39,707 firearm-related deaths in the United States. That same year, six out of every ten fire-arm related deaths were suicides, and more than three out of every ten were homicides. Among medically treated injuries in 2019, seven out of every ten were from firearm-related assaults, and two out of every ten were unintentional firearm injuries.¹⁵⁶

Hospitalizations for Non-Fatal Firearm Injuries

The table and figure below show the hospitalization rates from non-fatal firearm injuries per 100,000 population for Palm Beach County and Florida from 2015 to 2019. Each year during this timeframe, this Palm Beach County rate was higher than the Florida rate. Most recently in 2019, the Palm Beach County rate decreased from 12.9 per 100,000 in 2018 to 9.3 per 100,000 in 2019.

The Healthy People 2030 national target is to reduce the rate of non-fatal firearm injuries to 10.1 per 100,000.¹⁵⁷ As of 2019, Palm Beach County is meeting the Healthy People 2030 target for this indicator.

Table 209: Hospitalizations for Non-Fatal Firearm Injuries, Rate Per 100,000 Population, Palm Beach County and Florida, 2015-2019

Year	Palm Beach County		Florida	
	Count	Rate	Count	Rate
2015	177	12.8	1,902	9.6
2016	212	15.2	2,014	10.0
2017	169	12.0	1,874	9.1
2018	186	12.9	1,841	8.8
2019	135	9.3	1,929	9.1

Hospitalizations for Non-fatal Firearm Injuries, By Race

According to the Centers for Disease Control and Prevention, some groups have a higher rate of firearm injury based on age, race, ethnicity, and gender. Regarding gender, males account for 86% of all firearm death victims and 87% of non-fatal firearm injuries. Regarding age, firearm homicide rates are highest among teens and young adults ages 15 to 34 years. Additionally, rates are highest among Black and American Indian/Alaskan Native when comparing races and among Hispanic populations when comparing ethnicities.¹⁵⁸

The table and figure below show the hospitalization rates from non-fatal firearm injuries per 100,000 population by race in Palm Beach County and Florida from 2015 to 2019. In Palm Beach County, the rate decreased overall for Black residents during this timeframe but remained much higher compared to White residents every year reported. For example, in 2019, the rate among Black residents (29.9 per 100,000) was nearly eight times higher than the rate among White residents (3.8 per 100,000).

The Healthy People 2030 national target is to reduce the rate of non-fatal firearm injuries to 10.1 per 100,000.¹⁵⁹ While Palm Beach County as a whole was meeting the Healthy People 2030 target for this indicator as of 2019, when looking at the data by race the rate among Black residents exceeds the national target by nearly 3 times.

Hospitalizations for Non-Fatal Firearm Injuries, By Ethnicity

This table and figure show the hospitalization rate from non-fatal firearm injuries per 100,000 population for Palm Beach County and Florida by ethnicity from 2015 to 2019. In Palm Beach County, the rate among the Hispanic and non-Hispanic populations fluctuated but decreased overall. With the exception of 2018, Palm Beach County Hispanic residents had a higher rate than Hispanics in the entire state. Additionally, the non-Hispanic rate in Palm Beach County was higher than the non-Hispanic rate in the state. Non-Hispanic residents in Palm Beach County were much more likely to be hospitalized for non-fatal firearm injuries compared to Hispanic residents every year reported. Most

recently in 2019, the non-fatal firearm injury hospitalization rate was 5.7 per 100,000 among Hispanic residents in Palm Beach County compared to 10.0 per 100,000 among non-Hispanics residents.

Hospitalizations for Unintentional Falls

According to the Florida Department of Health, unintentional falls are the leading cause of fatal and non-fatal injuries among Florida residents ages 65 years and older. In addition to deaths and injuries, and the costs associated with them, falls can have many negative consequences for older adults including the fear of falling again, forced relocation from the home, loss of independence, and stress in the family. By reducing their chances of falling, older adults can stay independent and maintain a high level of quality of life.¹⁶⁰

Hospitalizations for Unintentional Falls

The table and graph below show the unintentional falls hospitalization rate per 100,000 population for Palm Beach and Florida from 2015 to 2019. During this timeframe, the Palm Beach County rate was consistently higher than the state rate. The Palm Beach County rate increased from 425.4 per 100,000 in 2018 to 443.5 per 100,000 in 2019, which was much higher than the 2019 Florida rate of 353.8 per 100,000.

There is no Healthy People 2030 national target specific to reducing the hospitalization rate from unintentional falls.

Hospitalizations for Unintentional Falls, By Race

The table and figure below show hospitalization rate from unintentional falls per 100,000 population by race for Palm Beach County and Florida from 2015 to 2019. Each year during this timeframe, the hospitalization rate among White residents was much higher than the rate among Black residents in both the county and the state. From 2018 to 2019, the rate increased among White residents from 500.6 per 100,000 to 511.6 per 100,000 and among Black residents from 116.0 per 100,000 to 142.0 per 100,000. The hospitalization rate for unintentional falls among White and Black residents in Palm Beach County was higher than their respective state rate in 2019.

Hospitalizations for Unintentional Falls, By Ethnicity

The table and figure below show the hospitalization rate from unintentional falls per 100,000 population by ethnicity in Palm Beach County and Florida from 2015 to 2019. The hospitalization rate increased overall among both Hispanic and non-Hispanic residents during this timeframe. In addition, the rate among non-Hispanic residents in the county was higher than the state each year reported. In 2019, Hispanic residents (175.3 per 100,000) had a lower hospitalization rate than non-Hispanic residents (512.8 per 100,000) in Palm Beach County.

Chronic Lower Respiratory Disease

Chronic lower respiratory disease (CLRD) is a lung disease that makes it difficult to breathe. Most people with CLRD have both emphysema and chronic bronchitis. According to the Centers for Disease Control and Prevention, CLRD, specifically chronic obstructive pulmonary disease (COPD), was the fourth leading cause of death in the United States in 2018. Based on 2013 data, it was found that the following groups were most likely to be diagnosed with COPD: women, adults ages 65 and older, American Indians/Alaska Natives, multiracial non-Hispanics, current or former smokers, and people with a history of asthma.¹⁶¹

Age-Adjusted Hospitalizations from Chronic Lower Respiratory Disease (including asthma)

The following table and figure show the age-adjusted hospitalization rate from CLRD for Palm Beach County and Florida from 2015 to 2019. The Palm Beach County hospitalization rate was lower than the state rate each year aside from 2016. In 2019, the Palm Beach County rate was 234.9 per 100,000 in Palm Beach County compared to the Florida rate of 257.6 per 100,000. In addition, the county rate declined from 2016 (361.1 per 100,000) to 2019 (234.9 per 100,000).

There is no Healthy People 2030 national target specific to reducing the rate of hospitalization from CLRD.

Age-Adjusted Hospitalizations from Chronic Lower Respiratory Disease (Including Asthma), By Race

The following table and figure show the age-adjusted hospitalization rate from CLRD for Palm Beach County and Florida by race from 2015 to 2019. From 2015 to 2016, the rate increased among both White and Black residents in Palm Beach County followed by a decline from 2016 to 2019. In 2019, White Palm Beach County residents (176.7 per 100,000) had a lower hospitalization rate than White Florida residents (227.7 per 100,000). This same year, Black Palm Beach County residents (350.5 per 100,000) alternatively had a higher hospitalized rate from CLRD than Black Florida residents (335.8 per 100,000).

Chronic Obstructive Pulmonary Disease, Emphysema, and Chronic Bronchitis

Adults Who Have Ever Been Told They Had Chronic Obstructive Pulmonary Disease, Emphysema, Or Chronic Bronchitis

This table and graph show the percentage of adults in Palm Beach County and Florida who have ever been told they have chronic obstructive pulmonary disease (COPD), emphysema, or chronic bronchitis in 2013, 2016, and 2019. During this timeframe, this percentage increased from 5.5% in 2013 to 6.9 % in 2019 in Palm Beach County. The Palm Beach County rate was lower than the state rate each year reported.

There is no Healthy People 2030 national target specific to reducing the percentage of adults who have ever been told they had chronic obstructive pulmonary disease, emphysema, or chronic bronchitis.

Adults Who Have Ever Been Told They Had Chronic Obstructive Pulmonary Disease, Emphysema, Or Chronic Bronchitis, By Race and Ethnicity

The following table and graph show the percentage of adults in Palm Beach County and Florida who have ever been told they have COPD, emphysema, or chronic bronchitis by race and ethnicity in 2013, 2016, and 2019. In Palm Beach County the percentage increased among non-Hispanic White residents and non-Hispanic Black residents each year reported. The percentage of Hispanic residents in Palm Beach County decreased from 2013 (7.5%) to 2016 (2.0%), then increased in 2019 (3.4%). In 2019 in Palm Beach County, the percentage of adults that were ever told they had COPD, emphysema, or chronic bronchitis was 9.3% among non-Hispanic White residents compared to 4.3% among non-Hispanic Black and 3.4 % of Hispanic residents.

DRAFT

Alzheimer's

Alzheimer's disease is the most common type of dementia. Dementia is a general term for the impaired ability to remember, think, or make decisions that interferes with performing daily activities. Dementia mostly affects older adults but is not a part of normal aging. According to the Centers for Disease Control and Prevention, 5.8 million Americans were living with Alzheimer's disease in 2020. Age is the best-known risk factor for Alzheimer's disease. Symptoms of this disease can first appear after age 60 and increase in frequency with increasing age. ¹⁶²

Probable Alzheimer's Cases Among Adults Age 65+

The table and figure below show the rate per 100,000 population of probable Alzheimer's cases among adults 65 and older for Palm Beach County and Florida from 2016 to 2020. The percentage of probable cases among adults 65 and older declined slightly in Palm Beach County from 2017 (15.5%) to 2020 (14.7%). However, the percentage in Palm Beach County was higher than the percentage in the state every year during the reported timeframe. In 2019, the percent of probable cases was 14.7% in Palm Beach County compared to 12.7% in the state overall.

Healthy People 2030 does not have a national target specific to reducing the percent of probable Alzheimer's cases. However, Healthy People 2030 has set a national goal to improve health and quality of life for people with dementia, including Alzheimer's.

Table 220: Probable Alzheimer's Cases Among Adults Age 65+, Rate Per 100,000 Population, Palm Beach County and Florida, 2015-2020

Year	Palm Beach County			Florida		
	Probable Cases	Population 65+	% of Population 65+	Probable Cases	Population 65+	% of Population 65+
2016	47,890	320,711	14.9%	507,862	3,933,492	12.9%
2017	50,925	328,815	15.5%	541,446	4,073,855	13.3%
2018	52,092	339,885	15.3%	553,734	4,197,331	13.2%
2019	51,873	348,728	14.9%	556,997	4,341,615	12.8%
2020	52,479	358,002	14.7%	572,997	4,515,021	12.7%

Diabetes

Diabetes is a disease that occurs when a person's blood glucose, also called blood sugar, is too high. The most common type of diabetes is type 2 diabetes. Risk factors that put an individual at a higher risk for developing type 2 diabetes include being physically active less than 3 times per week, overweight, 45 years or older, or having a close relative with diabetes.¹⁶³ Individuals with diabetes are twice as likely to have heart disease or suffer a stroke compared to someone who does not have diabetes.¹⁶⁴ Additionally, those with diabetes are more likely to have these outcomes at a younger age. Moreover, Black Americans, Hispanics, and American Indians or Alaska Natives are at a higher risk for developing diabetes than other races.¹⁶⁵

Age-Adjusted Hospitalizations from Or with Diabetes

The following table and figure show the age-adjusted diabetes hospitalization rate per 100,000 population for Palm Beach County and Florida from 2015 to 2019. From 2015 to 2019, the rate in the county fluctuated, with a recent increase from 1,813.9 per 100,000 in 2018 to 1,845.8 per 100,000 in 2019. This rate was much lower than the Florida rate in 2019 of 2,314.2 per 100,000.

The Healthy People 2030 national target to reduce hospital admissions for diabetes to 264 per 100,000 adults ages 65 years and over.¹⁶⁶ While the data below shows the hospitalization rate for all ages, any reduction in these numbers is progress towards a healthier community.

Table 221: Age-Adjusted Hospitalizations from Or with Diabetes, Rate Per 100,000 Population, Palm Beach County and Florida, 2015-2019

Year	Palm Beach County		Florida	
	Count	Rate	Count	Rate
2015	37,574	1,835.0	617,606	2,350.4
2016	38,330	1,847.3	632,161	2,344.5
2017	38,679	1,826.6	648,827	2,338.9
2018	39,282	1,813.9	658,129	2,310.2

Age-Adjusted Hospitalizations from Or with Diabetes, By Race

The table and figure below show the age-adjusted diabetes hospitalization rate per 100,000 population for Palm Beach County and Florida by race from 2015 to 2019. Each year in Palm Beach County, the rate among Black residents was over double the rate among White residents. In 2019, the rate was 3,613.3 per 100,000 among Black residents and 1,373.1 per 100,000 among White residents in the county.

Age-Adjusted Hospitalizations from Or with Diabetes, By Ethnicity

The table and figure below show the age-adjusted diabetes hospitalization rate per 100,000 population by ethnicity Palm Beach County and Florida from 2015 to 2019. Each year during this timeframe, the rate was higher among the Hispanic population than the non-Hispanic population in the county. The rate among both the Hispanic and non-Hispanic populations declined from 2016 to 2018 then increased to 2019. In 2019, the rate was 1,885.6 per 100,000 among Hispanic residents compared to 1,836.8 per 100,000 among non-Hispanic residents in the county. Among both groups, the rate in the county was consistently lower than the rate among Hispanics and non-Hispanics in the state overall.

Age-Adjusted Emergency Room Visits Due to Diabetes

The table and figure below show the age-adjusted rate of emergency department visits due to diabetes in Palm Beach County and Florida from 2015 to 2019. Over this time period, the rate in Palm Beach County and Florida fluctuated but ultimately increased overall. In 2019, the rate was lower in Palm Beach County (199.6 per 100,00) compared to the state (243.6 per 100,000).

There is no Healthy People 2030 national target specific to reducing the rate of emergency room visits due to diabetes.

Age-Adjusted Emergency Room Visits Due to Diabetes, By Ethnicity

The table and figure below show the age-adjusted rate of emergency department visits due to diabetes by ethnicity in Palm Beach County and Florida from 2015 to 2019. Each year, aside from 2016, the rate was higher among the Hispanic population than the non-Hispanic population. Additionally, the rate among both the Hispanic and non-Hispanic populations increased greatly from 2018 to 2019. In 2019, the rate was 221.7 per 100,000 population among the Hispanic population compared to 194.6 per 100,000 among the non-Hispanic population in the county, and the rate among Hispanic residents in the county was higher than the rate among Hispanic residents in the state overall.

Adults Who Have Ever Been Told They Had Diabetes

The following table and figure show the percentage of adults who had ever been told they had diabetes for Palm Beach County and Florida from 2013 to 2019. During this timeframe in Palm Beach County, the percentage of adults declined slightly and remained lower than the state percentage each year. In 2019, 10.5% of adults had ever told they had diabetes in the county compared to 11.7% in the state overall.

There is no Healthy People 2030 national target specific to reducing the of percentage of adults who have ever been told they had diabetes.

Adults Who Have Ever Been Told They Had Diabetes, By Race and Ethnicity

The table and figure below show the percentage of adults who had ever been told they had diabetes by race and ethnicity for Palm Beach County and Florida in 2013, 2016, and 2019. The percentage of adults fluctuated among all racial and ethnic groups in the county over each year reported. Most recently from 2016 to 2019, the non-Hispanic White rate increased, while the non-Hispanic Black and Hispanic rate decreased. In 2019, this percentage was highest among non-Hispanic Whites (11.6%) compared to non-Hispanic Blacks (9.3%) and Hispanics (7.6%).

Hypertension

Hypertension is defined by the American College of Cardiology and the American Heart Association as a blood pressure that is at or above 130 over 60 millimeters of mercury (mm Hg). Having hypertension puts individuals at risk for heart disease and stroke, which is the leading cause of death in the United States.¹⁶⁷

Certain factors can put an individual at an increased risk of hypertension, including certain health conditions, lifestyle behaviors, and family history of hypertension. The risk of hypertension also increases with age, because blood pressure tends to rise as an individual gets older. In addition to age, other risk factors include sex, race, and ethnicity. When looking at different groups that are most at risk for hypertension, women are more likely to develop hypertension than men. Black individuals develop hypertension earlier in life than White individuals, and Black individuals are more likely to develop hypertension than other racial groups, as well as Hispanic individuals.¹⁶⁸

Preventable Hospitalizations Under 65 from Hypertension

The table and figure below show the rate of preventable hospitalizations due to hypertension per 100,000 population for Palm Beach County and Florida from 2015 to 2019. During this timeframe, this rate significantly decreased in Palm Beach County and the state overall. However, it is important to note that increases or decreases starting in 2015 may not be caused by changes in disease trends but rather due to changes in coding following the transition from the ICD 9th Revision Clinical Modification to the ICD 10th Revision Clinical Modification.

There is no Healthy People 2030 national target specific to reducing the rate of preventable hospitalizations due to hypertension.

Table 229: Preventable Hospitalizations Under 65 from Hypertension, Rate Per 100,000 Population Under 65, Palm Beach County and Florida, 2015-2019

Preventable Hospitalizations

Ambulatory care sensitive conditions are conditions where timely and effective ambulatory or outpatient care can decrease hospitalization by preventing the onset of an illness or condition, by controlling an acute episode of an illness or by managing a chronic disease or condition.¹⁶⁹ High rates of ambulatory care sensitive hospitalizations in a community may be an indicator of poor prevention efforts, a primary care resource shortage, poor performance of primary care delivery systems, or other factors that create barriers to obtaining timely and effective care.

Preventable Hospitalizations Under 65 from All Conditions

Preventable Hospitalizations Under 65 from All Conditions

The table and figure below show the rate per 100,000 population of preventable hospitalizations from all conditions among adults ages 65 and under for Palm Beach County and Florida from 2015 to 2019. During this timeframe, this rate decreased overall in Palm Beach County and at the state level. In 2019, the rate was 875.4 per 100,000 in the county and 928.6 per 100,000 in the state.

There is no Healthy People 2030 national target specific to reducing the rate of preventable hospitalizations from all conditions among adults ages 65 and under.

DRAFT

Preventable Hospitalizations Under 65 from Kidney and Urinary Tract Infections

Preventable Hospitalizations Under 65 from Kidney/Urinary Infection

The table and figure below show the rate of hospitalizations due to preventable kidney and urinary infection per 100,000 population under 65 years old in Palm Beach County and Florida from 2015 to 2019. During this timeframe, this rate decreased in Palm Beach County and the state overall. However, there was a slight increase in the rate in Palm Beach County from 2018 (30.9 per 100,000) to 2019 (31.9 per 100,000). In 2019, the rate was higher at the county level (31.9 per 100,000) compared to the state level (25.3 per 100,000).

There is no Healthy People 2030 national target specific to reducing the rate of preventable hospitalizations from kidney and urinary tract infections among adults ages 65 and under.

Table 233: Preventable Hospitalizations Under 65 from Kidney/Urinary Infection, Rate Per 100,000 Population Under 65, Palm Beach County and Florida, 2015-2019

Year	Palm Beach County		Florida	
	Count	Rate	Count	Rate

Preventable Hospitalizations Under 65 from Dehydration

Preventable Hospitalizations Under 65 from Dehydration - Volume Depletion

This table and figure show the rate of preventable dehydration hospitalizations per 100,000 population under 65 years old in Palm Beach County and Florida from 2015 to 2019. During this timeframe, the rate decreased steadily in Palm Beach County and the state. In 2019, the rate was higher in the county (76.9 per 100,000) compared to the state (62.2 per 100,000).

There is no Healthy People 2030 national target specific to reducing the rate of preventable hospitalizations from dehydration among adults ages 65 and under.

Mortality

Leading Causes of Death

Leading Causes of Death

In 2020, the leading cause of death in the United States was heart disease, followed by cancer, COVID-19, accidents, stroke, chronic lower respiratory diseases, Alzheimer's disease, diabetes, influenza and pneumonia, and nephritis.¹⁷⁰ Crucially, heart disease and cancer both account for roughly 600,000 deaths or more every year, while no other leading cause of death passes 351,000.

The table below shows the leading causes of death in Palm Beach County in 2020. Heart disease and cancer were the leading causes of death, together accounting for 42.5% of all deaths in the county in 2020. COVID-19, Stroke, unintentional injury, and chronic lower respiratory disease followed, collectively accounting for 27.1% of all deaths in the county.

Healthy People 2030 has not set a national target for leading causes of death overall.

Table 236: Leading Causes of Death, Palm Beach County, 2020

Cause of Death	Deaths	Percent of Total Deaths	Crude Rate Per 100,000	Age-Adjusted Death Rate Per 100,000	YPLL < 75 Per 100,000 Under 75

Age-Adjusted Death Rate

Age-Adjusted Death Rate

The national age-adjusted death rate declined in the past decade, from 749.6 per 100,000 population in 2009 to 723.6 in 2018.¹⁷¹ The table below shows the age-adjusted death rate in Palm Beach County and Florida from 2016 to 2020. During this time frame, both the Palm Beach County and the state age-adjusted death rate stayed relatively stable between 2016 and 2017, followed by notable decreases in both 2018 and 2019. In 2020, however, a major spike in the age-adjusted death rates for both Palm Beach County and Florida was reported. Across all years, the Palm Beach County rate was much lower than the Florida rate.

Healthy People 2030 has not set a national target for age-adjusted death rate.

Table 237: Age-Adjusted Death Rate, Palm Beach County and Florida, 2016-2020

Year	Palm Beach County		Florida

Heart Disease Deaths

Heart disease encompasses many types of heart conditions and is the leading cause of death in the United States. Symptoms of heart disease often go unnoticed until someone has a cardiac event, such as a heart attack or heart failure. Heart disease is largely preventable through diet and lifestyle habits. High blood pressure, also known as hypertension, high cholesterol, and smoking status are significant risk factors for heart disease.¹⁷²

Deaths from Major Cardiovascular Diseases

Major cardiovascular diseases include all diseases that affect the cardiovascular system.

Age-Adjusted Deaths from Major Cardiovascular Diseases

The table below shows the age-adjusted death rate per 100,000 from major cardiovascular diseases in Palm Beach County and Florida from 2016 to 2020. The rate among Palm Beach County residents declined from 2017 (177.3 per 100,000) to 2019 (173.6 per 100,000), then increased most recently in 2020 (184.2 per 100,000). Additionally, the rate among Palm Beach County residents was lower than the rate among Florida residents overall each year reported.

There is no Healthy People 2030 national target directly associated with this health indicator.

Table 238: Age-Adjusted Deaths from Major Cardiovascular Diseases, Palm Beach County and Florida, 2016-

Year	Palm Beach County		Florida	
	Count	Rate	Count	Rate

Age-Adjusted Deaths from Major Cardiovascular Diseases, By Race

This table and graph below show the age-adjusted death rate per 100,000 population from major cardiovascular diseases by race in Palm Beach County and Florida from 2016 to 2020. In Palm Beach County and Florida, the rate among White and Black residents fluctuated. However, most recently, the rate among White Palm Beach county residents increased from 166.9 per 100,000 in 2019 to 175.3 per 100,000 in 2020. Similarly, the rate among Black Palm Beach County residents also increased from 218.1 per 100,000 in 2019 to 245.7 per 100,000 in 2020. Each year from 2016 to 2020, the rate among Palm Beach County White and Black residents was lower than the rate among White and Black residents in Florida overall.

Age-Adjusted Deaths from Major Cardiovascular Diseases, By Ethnicity

The following table and graph show the age-adjusted death rate per 100,000 population from major cardiovascular diseases in Palm Beach County and Florida from 2016 to 2020 by ethnicity. The rate among non-Hispanic residents in Palm Beach County was higher than the rate among Hispanic residents each year during this time frame. The highest rate reported in Palm Beach County was 187.9 per 100,000 among the non-Hispanic resident population in 2020. Additionally, the rate among Hispanic and non-Hispanic residents in Palm Beach County was lower than the rate among Hispanic and Non-Hispanic residents each year from 2016 to 2020.

Deaths from Hypertension

According to the American Heart Association, hypertension, or high blood pressure, is when the force of blood flowing through your blood vessels is consistently too high resulting in long term damage to your circulatory system when left untreated. High blood pressure is a significant contributing factor to heart attack, stroke, diabetes, and other major health issues. Nearly half of Americans have high blood pressure, many of whom are unaware.¹⁷³

Age-Adjusted Deaths from Hypertension

The table below shows the age-adjusted hypertension death rate per 100,000 population in Palm Beach County and Florida from 2016 to 2020. The rate among residents in Palm Beach County declined from 2017 (6.0 per 100,000) to 2019 (5.0 per 100,000), then increased in 2020 (6.4 per 100,000). Additionally, the rate among Palm Beach County residents was lower than the rate among Florida residents overall each year during this timeframe.

There is no Healthy People 2030 national target directly associated with this health indicator.

Age-Adjusted Deaths from Hypertension, By Race

This table and graph show the age-adjusted hypertension death rate per 100,000 population by race in Palm Beach County and Florida from 2016 to 2020. The rate among Palm Beach County Black residents declined from 2015 (14.2 per 100,000) to 2018 (7.7 per 100,000), then increased in 2019 (12.2 per 100,000) and 2020 (14.8 per 100,000). The rate among Palm Beach County White residents fluctuated during this time frame, increasing most recently from 4.4 per 100,000 in 2019 to 5.4 per 100,000 in 2020. The death rate among Palm Beach County Black residents was at least double the rate among White residents each year during this time frame, except 2018.

Figure 148: Age-Adjusted Deaths from Hypertension, By Ethnicity, Palm Beach County and Florida, 2016-2020

Deaths from Coronary Heart Disease

The National Heart, Lung, and Blood Institute of the National Institutes of Health defines coronary heart disease as a type of heart disease that develops when the arteries of the heart cannot deliver enough oxygen-rich blood to the heart. Many people do not know that they have this disease, and lifestyle and behaviors are important factors for prevention.¹⁷⁴

Age-Adjusted Deaths from Coronary Heart Disease, By Sex

The table and graph below show the age-adjusted coronary heart disease death rate per 100,000 population in Palm Beach County and Florida from 2016 to 2020 by sex. There was a significant disparity between the male and female rate each year during this time frame for both Palm Beach County and Florida, with the rate among male residents much higher than the rate among females. In Palm Beach County, the rate among male residents decreased each year from 2017 (120.1 per 100,000) to 2019 (112.3 per 100,000), then increased in 2020 (122.4 per 100,000). The rate among female Palm Beach County residents increased from 2017 (60.7 per 100,000) to 2020 (69.2 per 100,000). In 2020, the rate among Palm Beach County male (122.4 per 100,000) and female (69.2 per 100,000) residents was higher than the rate among Florida male (121.9 per 100,000) and female (64.3 per 100,000) residents. The Healthy People 2030 national target is to reduce the age-adjusted rate of coronary heart disease deaths to 71.1 per 100,000 population.¹⁷⁵ In Palm Beach County, as of 2020, the male rate was much higher than this target and the female rate was slightly lower.

Table 244: Age-Adjusted Deaths from Coronary Heart Disease, By Sex, Palm Beach County and Florida, 2016-2020

Age-Adjusted Deaths from Coronary Heart Disease, By Race

This table and graph show the age-adjusted coronary heart disease death rate per 100,000 population by race in Palm Beach County and Florida from 2016 to 2020. Notably, the rate among Palm Beach County Black residents declined from 2016 (104.4 per 100,000) to 2019 (87.6 per 100,000), then increased dramatically in 2020 (109.1 per 100,000). Additionally, the rate among Palm Beach County Black residents was higher than the rate among White residents each year from 2016 to 2020. In 2020, rate among Palm Beach County White residents was 91.1 per 100,000.

Age-Adjusted Deaths from Coronary Heart Disease, By Ethnicity

The table and graph below show the age-adjusted coronary heart disease death rate per 100,000 population by ethnicity in Palm Beach County and Florida from 2016 to 2020. While the rate among both the Palm Beach County Hispanic and non-Hispanic residents fluctuated during this time frame, both increased most recently in 2020. In 2020, the rate among Palm Beach County Hispanic residents was 79.8 per 100,000, while the rate among Non-Hispanic residents was 94.3 per 100,000. Additionally, the rates among Palm Beach County Hispanic and non-Hispanic residents were lower than their respective Florida rates each year, except in 2020.

Figure 151: Age-Adjusted Deaths from Coronary Heart Disease, By Ethnicity, Palm Beach County and Florida, 2016-2020

Stroke Deaths

According to the American Stroke Association, stroke is the fifth leading cause of death and the leading cause of disability nationwide. Strokes occur when either a clot obstructs the blood flow to the brain or a blood vessel bursts preventing blood flow to the brain, and thus can cause damage to the brain in varying degrees. Because of this, having a stroke can cause parts of the body to not work, impacting long-term quality of life and in some cases causing death.¹⁷⁶ Similar to heart disease, strokes are largely preventable through lifestyle and behavior modifications and medication adherence.

Age-Adjusted Deaths from Stroke

This table and graph below show the age-adjusted stroke death rate per 100,000 population in Palm Beach County and Florida from 2016 to 2019. In Palm Beach County, the rate increased from 36.4 per 100,000 in 2018 to 40.6 per 100,000 in 2020. For each year from 2016 to 2020, the rate among Palm Beach County residents was lower than the rate among Florida residents overall.

The Healthy People 2030 national target is to reduce stroke deaths per 100,000 population to 33.4 per 100,000 population.¹⁷⁷ As of 2020, Palm Beach County was not yet meeting this target.

Table 247: Age-Adjusted Deaths from Stroke, Palm Beach County and Florida, 2016-2020

Year	Palm Beach County		Florida	
	Count	Rate	Count	Rate
2016	1,045	36.1	11,843	38.5
2017	1,134	37.7	12,557	39.6
2018	1,130	36.4	13,238	41.0

Age-Adjusted Deaths from Stroke, By Race

This table and graph show the age-adjusted stroke death rate per 100,000 population by race in Palm Beach County and Florida from 2016 to 2020. In Palm Beach County, the rate among Black residents was higher than the rate among White residents each year during this timeframe. Most recently in 2020, the rate among Black residents in Palm Beach County was 62.0 per 100,000, while the rate among White residents was 37.8 per 100,000. The death rate among White and Black Palm Beach County residents increased from 2019 to 2020.

Age-Adjusted Deaths from Stroke, By Ethnicity

The table and graph below show the age-adjusted stroke death rate per 100,000 population by ethnicity in Palm Beach County and Florida from 2016 to 2020. In recent years, the rate among Hispanic residents rose from 32.7 per 100,000 in 2018 to 40.3 per 100,000 in 2020, and the rate among non-Hispanic residents rose from 36.6 per 100,000 in 2018 to 40.9 per 100,000 in 2019. Additionally, both county rates in 2020 were lower than their respective state rates that same year.

Figure 154: Age-Adjusted Deaths from Stroke, By Ethnicity, Palm Beach County and Florida, 2016-2020

Cancer Deaths

Cancer is a disease that can start almost anywhere in the body and spreads to other parts of the body via abnormal or damages cells growing uncontrollably. These abnormal or damages cells form tumors that can be cancerous.¹⁷⁸ Cancer is complex and includes a number of diseases that have their own risk factors, some controllable and some uncontrollable. For instance, controllable risk factors for cancer include, but are not limited to, tobacco use, sun exposure, drinking alcohol, and diet.¹⁷⁹

According to the American Cancer Society, one in three people will be diagnosed with cancer during their lifetime, and early screening and detection increases the likelihood of being cured.¹⁸⁰ Additionally, certain population groups experience cancer disparities due to barriers in accessing quality primary and specialty health care.¹⁸¹

Age-Adjusted Cancer Deaths

The table below shows the age-adjusted cancer death rate per 100,000 population in Palm Beach County and Florida from 2016 to 2020. The rate among Palm Beach County and Florida residents declined each year from 2016 to 2020. The rate among Palm Beach County residents in 2020 was 122.0 per 100,000, which was lower than the state rate of 138.7 per 100,000 that same year.

The Healthy People 2030 national target is to reduce the overall cancer death rate to 122.7 per 100,000 population.¹⁸² As of 2020, Palm Beach County is meeting that target with a cancer death rate of 122.0 per 100,000 population.

Age-Adjusted Cancer Deaths, By Race

This table and graph below show the age-adjusted cancer death rate per 100,000 population by race in Palm Beach County and Florida from 2016 to 2020. The rate among Palm Beach County White residents declined from 2016 (129.2 per 100,000) to 2019 (119.9 per 100,000), then increased slightly in 2020 (122.3 per 100,000). The rate among Palm Beach County Black residents increased from 2017 (125.9 per 100,000) to 2019 (141.3 per 100,000), then decreased in 2020 (124.9 per 100,000). The rate among Palm Beach County White and Black residents was lower than the respective Florida rate ever year 2016 to 2020.

Tobacco-Related Cancer Deaths

Tobacco-Related Cancer Deaths to Persons 35 and Over

The table below shows the tobacco-related cancer death rate per 100,000 population for persons ages 35 and over in Palm Beach County and Florida from 2016 to 2020. The Palm Beach County and Florida rate declined year over year during this timeframe. Each year, aside from 2016, the cancer death rate among county residents was lower than the death rate among Florida residents as a whole.

There is no Healthy People 2030 national target directly related to this health indicator.

Table 253: Tobacco-Related Cancer Deaths to Persons 35 And Over, Palm Beach County and Florida, 2016-2020

Tobacco-Related Cancer Deaths to Persons 35 and Over, By Race

This table and graph below show the tobacco-related cancer death rate per 100,000 by race for persons ages 35 and over in Palm Beach County and Florida from 2016 to 2020. Each year from 2016 to 2020, except 2019, the death rate among White residents was more than double the rate among Black residents. For example, in 2020 the rate among White Palm Beach County residents of 171.0 per 100,000 population while the rate among Black residents was 79.4 per 100,000. Additionally, the rate among statewide White residents in 2020 was 166.0 per 100,000, lower than the respective county rate that same year.

DRAFT

HIV/AIDS Deaths

Human immunodeficiency virus, also known as HIV, is a virus that attacks the body's immune system and leads to acquired immunodeficiency syndrome, or AIDS, if left untreated. HIV is spread by having unprotected sex or sharing needles, syringes, or other equipment used to inject drugs.¹⁸³ With proper medical care and effective HIV treatment, people with HIV can live healthy lives. There are multiple phases of HIV, the worst of which is AIDS. AIDS severely damages the immune system, causing risk for other severe illnesses. People diagnosed with AIDS typically survive about three years.¹⁸⁴

Age-Adjusted Deaths from HIV/AIDS

This table below shows the age-adjusted death rate per 100,000 population from HIV/AIDS in Palm Beach County and Florida from 2016 to 2020. The death rate among residents in Palm Beach County fluctuated over this timeframe, ultimately increasing slightly from 2.8 per 100,000 to 2.9 per 100,000 in 2020. In 2020, the rate among Palm Beach County residents (2.9 per 100,000) was higher than the rate among Florida residents (2.7 per 100,000) overall.

There is no Healthy People 2030 national target directly associated with this health indicator.

Age-Adjusted Deaths from HIV/AIDS, By Race

The table and graph below show the age-adjusted death rate per 100,000 population from HIV/AIDS in Palm Beach County and Florida from 2016 to 2020 by race. Across all years, the rate among Palm Beach County Black residents was much higher than the rate among White residents. Additionally, the rate among Palm Beach County Black residents was higher than the rate among Black residents in Florida overall each year, except 2016. In 2020, the rate among Palm Beach County White residents was 0.9 per 100,000 and the rate among Black residents was 11.8 per 100,000.

Age-Adjusted Deaths from HIV/AIDS, By Ethnicity

The following table and graph below show the age-adjusted death rate per 100,000 population from HIV/AIDS in Palm Beach County and Florida from 2015 to 2019 by ethnicity. From 2015 to 2019, the rate among Palm Beach County Hispanic and non-Hispanic residents fluctuated but generally declined, as depicted in the graph. Notably, the rate among Palm Beach County non-Hispanic residents was higher than the rate among Hispanic residents each year. In 2019, for example, the death rate among non-Hispanics was 3.1 per 100,000 and the rate among Hispanics was 0.8 per 100,000 in Palm Beach County.

Unintentional Injury Deaths

Unintentional injuries are injuries that were unplanned and could have been prevented. Unintentional injuries are the leading cause of death for individuals under 45 years of age nationwide, and prevention efforts are critical to keeping people safe.¹⁸⁵

Unintentional injuries include, but are not limited to, motor vehicle crashes, other land transport accidents, water/air/space transport accidents, falls, firearms discharge, drowning, smoke, fire and flame exposure, and poisoning and noxious substance exposure.¹⁸⁶

Age-Adjusted Deaths from Unintentional Injury

The table below shows the age-adjusted unintentional injury death rate per 100,000 population in Palm Beach County and Florida from 2016 to 2020. Each year over this time period, the rate among Palm Beach County residents was higher than the rate among Florida residents overall. Most recently, the rate among Palm Beach County residents increased from 55.6 per 100,000 population in 2018 to 72.4 per 100,000 population in 2020.

The Healthy People 2030 national target is to reduce the unintentional injury death rate to 43.2 per 100,000 population.¹⁸⁷ As shown in the table below, Palm Beach County was not yet meeting this target as of 2020.

Table 259: Age-Adjusted Deaths from Unintentional Injury, Palm Beach County and Florida, 2016-2020

Year	Palm Beach County		Florida	
	Count	Rate	Count	Rate
2016	998	68.1	12,522	55.7
2017	1,098	72.4	12,812	56.0
2018	913	55.6	12,616	53.8
2019	1,013	61.1	13,213	55.5
2020	1,157	72.4	15,987	67.4

Figure 165: Age-Adjusted Deaths from Unintentional Injury, By Race, Palm Beach County and Florida, 2016-2020

Age-Adjusted Deaths from Unintentional Injury, By Ethnicity

The table and graph below show the age-adjusted unintentional injury death rate per 100,000 population by ethnicity in Palm Beach County and Florida from 2016 to 2020. In Palm Beach County, the rate among Hispanic residents rose from 40.3 per 100,000 in 2019 to 50.3 per 100,000 in 2020, and the rate among non-Hispanic residents rose from 65.8 per 100,000 in 2019 to 79.3 per 100,000 in 2020. The rate among Palm Beach County non-Hispanic residents was higher than the rate among every other ethnicity at the county and state level each year from 2016 to 2020.

Deaths from Firearms Discharge

Age-Adjusted Deaths from Firearms Discharge

The table below shows the age-adjusted firearm discharge death rate per 100,000 in Palm Beach County and Florida from 2016 to 2020. The death rate among Palm Beach County residents increased from 2017 (12.0 per 100,000) to 2019 (13.6 per 100,000), then decreased in 2020 (12.2 per 100,000). The rate among Florida residents overall in 2020 was 13.7 per 100,000, slightly above the county rate that same year.

There is no Healthy People 2030 national target directly associated with this health indicator.

Age-Adjusted Deaths from Firearms Discharge, By Race

This table and graph show the age-adjusted death rate per 100,000 population from firearms discharge in Palm Beach County and Florida from 2016 to 2019 by race. The rate among Palm Beach County White residents declined from 2019 (10.9 per 100,000) to 2020 (8.3 per 100,000), while the rate among Palm Beach County Black residents rose from 2019 (21.4 per 100,000) to 2020 (22.9 per 100,000). The rate among Palm Beach County Black residents was at least double the rate among White residents each year from 2016 to 2020, except 2019. Additionally, the rate among Palm Beach County Black residents was higher than rate among Florida Black residents overall each year, except most recently in 2020 when the rate among Florida Black residents was 23.2 per 100,000.

DRAFT

Homicide Deaths

Age-Adjusted Homicide Deaths

The table below shows the age-adjusted homicide death rate per 100,000 population in Palm Beach County and Florida from 2016 TO 2020. The rate among Palm Beach County residents fluctuated during this time frame and ultimately decreased from 7.6 per 100,000 in 2019 to 7.4 per 100,000 in 2020. Each year from 2016 to 2019, the rate among Palm Beach County residents was higher than the rate among Florida residents overall. However, in 2020, the rate among Palm Beach County residents (7.4 per 100,000) was lower than Florida residents (7.7 per 100,000) overall.

The Healthy People 2030 national target is to reduce homicides to 5.5 per 100,000.¹⁸⁸ As of 2020, Palm Beach County was not yet meeting this target.

Age-Adjusted Homicide Deaths, By Race

The following table and graph show the age-adjusted homicide death rate per 100,000 population by race in Palm Beach County and Florida from 2016 to 2020. Each year, there was a large disparity between the rate among Palm Beach County White and Black residents, with the rate among Black residents being at least five times higher than the rate among White residents. Most recently in 2020, the rate among Black residents in Palm Beach County was 22.7 per 100,000, while the rate among White residents was 2.5 per 100,000. Additionally, the rate among Black Palm Beach County residents was higher than the rate among Black Florida residents every year during this timeframe.

Age-Adjusted Homicide Deaths, By Ethnicity

This table and graph below show the age-adjusted homicide death rate by ethnicity in Palm Beach County and Florida from 2016 to 2020. In Palm Beach County, the death rate among non-Hispanic residents was higher than the rate among Hispanic residents every year during this timeframe. The rate among Palm Beach County Hispanic residents increased from 2016 (4.5 per 100,000) to 2019 (6.7 per 100,000), then decreased in 2020 (3.5 per 100,000). Alternatively, rate among Palm Beach County non-Hispanic residents decreased from 2017 (9.8 per 100,000) to 2019 (7.3 per 100,000), then increased in 2020 (8.9 per 100,000).

Drug-Poisoning Deaths

Age-Adjusted Drug Poisoning Deaths

The table below shows the age-adjusted drug poisoning death rate per 100,000 population in Palm Beach County and Florida from 2016 to 2020. According to the Florida Department of Health, drug poisoning deaths include the intentional or unintentional overdose of a drug, being given the wrong drug, taking a drug inadvertently, or taking a drug in error.¹⁸⁹ The drug poisoning death rate among Palm Beach County residents increased from 30.5 per 100,000 in 2018 to 43.0 per 100,000 in 2020. The Palm Beach County rate was higher than the Florida rate each year during this timeframe.

There is no Healthy People 2030 national target directly associated with this health indicator.

Deaths from Unintentional Falls

Age-Adjusted Deaths from Unintentional Falls

The following table shows the age-adjusted death rate per 100,000 population from unintentional falls in Palm Beach County and Florida from 2015 to 2019. During this timeframe, the rate fluctuated overall but increased most recently from 7.9 per 100,000 in 2018 to 9.5 per 100,000 in 2019. Additionally, the death rate among Palm Beach County residents was lower than the death rate among Florida residents overall every year from 2015 to 2019.

The Healthy People 2030 national target is to reduce the fall-related death rate among older adults ages 65 and over to 63.4 per 100,000 population. While the data below shows the age-adjusted death rate from unintentional falls for all ages, any decrease is progress towards a healthier community.

Table 270: Age-Adjusted Deaths from Unintentional Falls, Palm Beach County and Florida, 2016-2020

DRAFT

Health Resource Availability and Access

The ability to access to timely, quality health care services is considered a social determinant of health and indicator of wellbeing in communities. Unfortunately, many people do not get the services they need due to availability or lack thereof of health care resources in a certain area.

According to the United States Census, approximately 1 in 10 individuals did not have health insurance coverage in 2020.¹⁹⁰ People without health insurance are less likely to have a primary care provider, resulting in delayed care, less preventative health screenings, and, ultimately, worse health outcomes. Specialty healthcare services may be inaccessible due to lack of transportation and necessary medication critical for treatment be unaffordable, further exacerbating issues.¹⁹¹ These situations can lead people to utilize the emergency department as a primary source of care, driving up healthcare costs and unnecessarily filling beds.

This section explores the availability of health resources and associated factors in Palm Beach County to assess residents' ability to access healthcare and identify any gaps or barriers that exist. Inequities in healthcare access can lead to disparities in health outcomes, so it is important to understand these factors related to Palm Beach County residents specifically. Data on Florida overall has been included for context. Included in this section is data on the following indicators: hospital utilization, health care provider supply, Federal Health Professional Shortage Areas (HPSAs), Federal Medically Underserved Areas/Populations (MUA/Ps), and health insurance.

Hospital Utilization

Utilization By Principal Diagnosis Groupings

Top Ten Principal Diagnosis Groupings for Inpatient Discharges

According to the Organisation for Economic Co-operation and Development, an inpatient discharge is the release of a patient who was formally admitted into a hospital for treatment and/or care and stayed for a minimum of one night.¹⁹² Generally, health complications treated in inpatient settings are often more complex and serious than health complications that are treated in outpatient settings.

The following table shows the top ten principal diagnosis groupings for inpatient discharges in Palm Beach County facilities in 2019. For Palm Beach County facilities, "Liveborn Infants, In Hospital" (4.9%) was the most common principal diagnosis grouping for an inpatient discharge, with "Sepsis, Unspecified Organism" (4.1%), "COVID-19" (3.4%), and "Liveborn Infant, Outside of Hospital" (2.9%) following in that order. Collectively, these top four principal diagnosis groupings accounted for 15.3% of all principal diagnoses in Palm Beach County facilities in 2019.

Top Ten Principal Diagnosis Groupings for Inpatient Discharges for Mental Health

The table below shows the top ten principal diagnosis groupings for inpatient discharges for mental health in Palm Beach County facilities in 2019. “Major depressive disorder, recurrent severe without psychotic features” (12.1%) was the most common principal diagnosis grouping, followed by “Bipolar disorder, unspecified” (6.1%), “Schizophrenia, unspecified” (4.5%), and “Schizoaffective disorder, bipolar type” (4.3%). Collectively, these top four diagnosis groupings accounted for 27.0% of all mental health-related inpatient discharge principal diagnoses in Palm Beach County facilities.

Healthy People 2030 has not set a national target for inpatient utilization top ten principal diagnoses.

Table 274: Top Ten Principal Diagnosis Groupings for Inpatient Discharges for Mental Health, Palm Beach County Facilities, 2019

Principal Diagnosis Group	Discharges	
	Count	Percent
Major depressive disorder, recurrent severe without psychotic features	1,562	12.1%
Bipolar disorder, unspecified	781	6.1%
Schizophrenia, unspecified	583	4.5%
Schizoaffective disorder, bipolar type	557	4.3%
Alcohol dependence with withdrawal, unspecified	549	4.3%
Paranoid schizophrenia	536	4.2%
Major depressive disorder, single episode, unspecified	507	3.9%

Emergency Department Top Ten Principal Diagnosis Groupings

There were 130 million emergency department visits in the United States in 2018, with 12.4% of those visits (16.2 million) requiring hospital admission.¹⁹³ Of those visits, 16.2 million required hospital admission, and 2.3 million required critical care.

The table below shows the emergency department top ten principal diagnosis groupings in Palm Beach County facilities in 2019. In Palm Beach County, there were a total of 370,728 emergency department discharges reported. Among those, “Other Chest Pain” (2.8%), “Acute Respiratory Infection” (2.4%), and “COVID-19” 2.2% were the top three principal diagnosis groupings reported. Perhaps reflecting the wide range of unique diagnosis groupings available in emergency department settings, the top three principal diagnosis groupings for emergency departments in Palm Beach County accounted for only 7.4% of all principal diagnoses at discharge.

Table 275: Emergency Department Top Ten Principal Diagnosis Groupings, Palm Beach County Facilities, 2019

Principal Diagnosis Group	Discharges	
	Count	Percent
Other Chest Pain	10,354	2.8%
Acute Respiratory Infection	8,830	2.4%
COVID-19	8,309	2.2%
Other Disorders of the Urinary System	6,808	1.8%
Chest Pain, Unspecified	5,006	1.5%

Hospital Emergency Department Utilization

Patients may elect to receive care in an emergency department setting because of the severity of a medical problem, or because of a lack of other viable options for care- often due to a lack of insurance, or because other sources of medical care are unavailable. Previous research has indicated that as high as 80% of patients in an emergency department setting have resorted to the emergency room for medical care due to a lack of access to other sources of care.¹⁹⁴

Hospital Emergency Department Utilization

The following table shows the hospital emergency department utilization in Palm Beach County from January to December 2020. As shown below, there were a total of 488,851 total emergency department visits in Palm Beach County in 2020. The most utilized hospital emergency department in the county was JFK Medical Center with 74,462 visits (15.2%), followed by Delray Medical Center with 47,522 visits (9.7%). No other center received more than 46,000 emergency department visits in 2020. Additionally, the lowest utilized hospital emergency departments were Bethesda Hospital West with 13,330 visits (2.7%) and Lakeside Medical Center with 16,721 visits (3.4%).

Healthy People 2030 has not identified a national target for emergency department utilization for all causes.

Table 277: Hospital Emergency Department Utilization, Palm Beach County, January-December 2020

Facility Name	Visits	% of Total
Bethesda Hospital East	33,008	6.8
Bethesda Hospital West	13,330	2.7
Boca Raton Regional Hospital	43,631	8.9

DRAFT

Adult Psychiatric Inpatient Utilization

As recent as 2015, staying overnight in a hospital or other inpatient setting was the least common type of mental health service that adults utilized. In 2015, 34.2 million adults aged 18 or older received mental health care during the past 12 months. Only 2.2 million adults, however, utilized inpatient services that same year. Approximately 1.4% of adults aged 18 to 26, 0.9% of adults aged 26 to 49, and 0.8% of adults aged 50 and older received inpatient mental health services in 2015. Increased access to mental health services in communities may reduce the need for inpatient mental health utilization.¹⁹⁵

The table below shows the adult psychiatric inpatient utilization in Palm Beach County by facility from January to December 2020. During this timeframe, 268 beds were available for adult psychiatric inpatient use across all facilities in Palm Beach County. The facility with the highest total admissions was JFK Medical Center North Campus, which reported 3,948- accounting for 30% of all adult psychiatric inpatient admissions in Palm Beach County in 2020.

Patient days refers to the total number of days a patient is treated in an inpatient setting. The facilities with the highest total number of patient days were JFK Medical Center North Campus (20,228) and Delray Medical Center (12,743). Those two centers also reported the highest occupancy rates in Palm Beach County, with 90.6% at JFK Medical Center North Campus and 87.4% at Delray Medical Center. The lowest occupancy rate was reported by Coral Shores Behavioral Health (36.5%). When looking at the average length of adult psychiatric inpatient stay across Palm Beach County, Delray Medical Center reported the highest average length of stay at 12.4 days, while the lowest was reported by Saint Lucie Medical Center at 3.6 days.

Healthy People 2030 has not set a national target for adult psychiatric inpatient utilization.

Table 278: Adult Psychiatric Inpatient Utilization, Palm Beach County, January-December 2020

Facility Name	Beds Licensed	Occupancy Rate	Admissions	Patient Days	Avg Length of Stay

Mental Health Hospital Utilization

According to the Substance Abuse and Mental Health Services Administration, in the United States, overall mental health service utilization was highest among White adults (18.3%), followed by adults reporting two or more races (17.6%), American Indian or Alaska Native (14.4%), Black (8.9%), Hispanic (8.7%), Native Hawaiian or Pacific Islander (6.9%), and Asian (5.9%) adults.¹⁹⁶ Regarding outpatient mental health services, the highest utilization rates were reported among adults reporting two or more races (10.2%), followed by White (9.0%), American Indian or Alaska Native (7.6%), Black (5.0%), and Asian (3.8%) adults. Additionally, females were more likely than males to utilize mental health outpatient services. White males utilized mental health services more than males of all other races, and White females also reported higher mental health service utilization than females of all other races. For every age group, White adults were more likely to use mental health services than adults of all other races. Socioeconomic and environmental factors, including access to insurance and available transportation, contribute to these disparities.

Mental Disorder Emergency Department Utilization, By Race

The table below shows the total number of mental disorder emergency department diagnoses by race in Palm Beach County in 2019. Of all races, White patients attributed to 38,141 (66.6%) total mental disorder diagnoses in 2019, followed by Black or African American patients with 13,014 (22.7%) diagnoses.

Healthy People 2030 has not set a national target for mental disorder emergency department utilization.

Table 279: Mental Disorder Emergency Department Utilization, By Race, Palm Beach County, 2019

Race	Principal Diagnosis	Other Diagnosis 1-3	Total	% of Total
American Indian or Alaska Native	6	20	26	0.05
Asian	70	175	245	0.43
Black or African American	2,730	10,284	13,014	22.7

Mental Disorder Inpatient Utilization, By Race

Nationally, inpatient mental health utilization was higher among Black adults (1.5%) than among White (0.8%), and Asian (0.6%) adults.¹⁹⁷ Differences in insurance coverage or type of insurance contribute to these disparities. For example, Medicaid use is associated with higher inpatient service use, and a lack of insurance may contribute to delays in receiving mental health care services until the severity of the condition necessitates inpatient services.

The table below shows the total number of mental disorder inpatient diagnoses by race in Palm Beach County in 2019. During that year, White patients (67.2%) received the highest number of inpatient mental disorder diagnoses, followed by Black or African American patients (22.6%).

Table 283: Mental Disorder Inpatient Utilization, By Race, Palm Beach County, 2019

Race	Principal Diagnosis	Other Diagnosis 1-3	Total	% of Total
American Indian or Alaska Native	16	17	33	0.09
Asian	87	126	213	0.56

Health Care Facility Capacity

Hospital Beds

According to the Florida Department of Health, the number of hospital beds indicates the number of people who may potentially receive care in the hospital on an in-patient basis.²⁰⁰ Looking at numbers of professionals or facilities within a geographic area helps to focus on the availability of health care and its quality.

Total Hospital Beds

The table below show the rate per 100,000 population of hospital beds for Palm Beach County and Florida. This rate has gradually decreased in the county and in the state overall. In 2016, the rate in Palm Beach County was 298.9 per 100,000 population and it decreased to 295.0 per 100,000 population in 2020.

Table 287: Total Hospital Beds, Rate Per 100,000 Population, Palm Beach County and Florida, 2016-2020

Year	Palm Beach County		Florida	
	Count	Rate	Count	Rate
2016	4,170	298.9	63,209	312.4
2017	4,223	299.3	64,197	312.3
2018	4,223	292.8	64,585	308.2
2019	4,332	297.0	66,195	311.2
2020	4,336	295.0	66,558	307.6

Nursing Home Beds

According to the Florida Department of Health, the number of nursing home beds indicates the number of people who may potentially receive residential nursing home care.²⁰¹ With a large population of individuals 65 and older in Palm Beach County this is an essential indicator to understand the county's capacity to provide quality care to a growing population of older individuals.

Total Nursing Home Beds

The table below shows the rate of nursing home beds per 100,000 in Palm Beach County and Florida from 2015 to 2019. The rate gradually decreased from 458.5 beds per 100,000 in 2015 to 433.9 beds per 100,000 population in 2020. This trend is similar to the trend seen at the state level during this period.

Adult Psychiatric Beds

When people in psychiatric distress are uninsured, charged with crimes, or meet the state criteria for civil commitment because they are violent or dangerous to themselves or others, psychiatric beds are where they are admitted for treatment. According to the Florida Department of Health, the number of psychiatric beds indicates the number of people who may potentially receive adult (age 18 and over) psychiatric care on an in-patient basis.²⁰²

Adult Psychiatric Beds

The table below shows the rate of adult psychiatric beds per 100,000 population for Palm Beach County and Florida from 2016 to 2020. The rate of adult psychiatric beds in Palm Beach County decreased each year from 2017 (16.8 per 100,000) to 2020 (15.6 per 100,000). Additionally, the rates at the county level were lower than the rates at the state level every year reported during this timeframe.

Table 289: Adult Psychiatric Beds, Rate Per 100,000 Population, Palm Beach County and Florida, 2016-2020

Year	Palm Beach County		Florida	
	Count	Rate	Count	Rate
2016	224	16.1	4,208	20.8
2017	237	16.8	4,279	20.8
2018	237	16.4	4,377	20.9
2019	237	16.2	4,475	21.0
2020	229	15.6	4,467	20.6

Child & Adolescent Psychiatric Beds

According to the Florida Department of Health, the number of child or adolescent beds indicates the number of people who may potentially receive child or adolescent (age less than 18) psychiatric care on an in-patient basis.²⁰³

Child and Adolescent Psychiatric Beds

The table below shows the number of child and adolescent psychiatric beds per 100,000 population for Palm Beach County and Florida from 2016 to 2020. During this timeframe, the rate of child and adolescent psychiatric beds in Palm Beach County remained consistent from 2016 to 2019 (1.9 per 100,000), then increased in 2020 (2.7 per 100,000). Each year, the rate at the county level was lower than the rate at the state level.

Table 290: Child and Adolescent Psychiatric Beds, Rate Per 100,000 Population, Palm Beach County and Florida, 2016-2020

Year	Palm Beach		Florida	
	Count	Rate	Count	Rate
2016	27	1.9	545	2.7
2017	27	1.9	516	2.5
2018	27	1.9	644	3.1
2019	27	1.9	646	3.0
2020	39	2.7	658	3.0

Adult Substance Use Beds

According to the Florida Department of Health, the number of adult substance abuse beds indicates the number of adults (age 18 and over) who may receive substance abuse treatment on an in-patient basis.²⁰⁴

Adult Substance Abuse Beds

The following table shows the rate of adult substance abuse beds per 100,000 population in Palm Beach County and Florida from 2016 to 2019. In Palm Beach County, the rate was 0.4 beds per 100,000 population in 2016 and 2017, then declined to 0.3 per 100,000 population in 2018 where it remained in 2019 and 2020. The rate in Palm Beach County was lower than the rate in Florida each year during this timeframe. This indicates that, although the population has increased, the number of substance abuse beds had not increased to meet this need.

Table 291: Adult Substance Abuse Beds, Rate Per 100,000 Population, Palm Beach County and Florida, 2016-2020

Year	Palm Beach County		Florida	
	Count	Rate	Count	Rate
2016	5	0.4	305	1.5
2017	5	0.4	352	1.7
2018	5	0.3	376	1.8
2019	5	0.3	366	1.7
2020	5	0.3	366	1.7

Nurses

Student-Nurse Ratio in Schools Grades PreK - 12

The following table shows the student to nurse ratio in schools from Pre-K to 12th grade in Palm Beach County and Florida from 2016 to 2020. This ratio indicates how many Pre-K to 12th grade students school each nurse is responsible for in Florida. The Palm Beach County ratio increased from 2016 (854.5) to 2019 (906.6), then declined in 2020 (886.9 per 100,000).

Table 296: Student-Nurse Ratio in Schools Grades PreK - 12, Palm Beach County and Florida, 2016-2020

Year	Palm Beach County	Florida
	Ratio	Ratio
2016	854.5	2,410.0
2017	885.3	2,381.5
2018	872.6	2,392.7
2019	906.6	2,449.3
2020	886.9	2,475.9

Licensed Psychologists

The table below shows the rate per 100,000 of licensed psychologists in Palm Beach County and Florida from 2016 to 2020. The rate fluctuated in Palm Beach County during this time frame, with an increase most recently from 35.7 per 100,000 in 2019 to 36.9 per 100,000 in 2020. The rate of licensed psychologists in Palm Beach County was higher than the rate in Florida each year from 2016 to 2020.

Table 303: Licensed Psychologists, Palm Beach County and Florida, 2016-2020

Year	Palm Beach County		Florida	
	Count	Rate	Count	Rate
2016	482	34.5	4,422	21.9
2017	505	35.8	4,676	22.7
2018	494	34.3	4,623	22.1
2019	520	35.7	4,886	23.0
2020	542	36.9	5,056	23.4

Licensed Marriage and Family Therapists (LMFTs)

The following table shows the rate of Licensed Marriage and Family Therapists (LMFTs) in Palm Beach County and Florida from 2016 to 2020. The rate of LMFTs in Palm Beach County fluctuated during this timeframe, increasing most recently from 15.0 per 100,000 in 2019 to 15.6 per 100,000 population in 2020. Additionally, the Palm Beach County rate was higher than the state rate each year from 2016 to 2020.

Table 304: Licensed Marriage and Family Therapists, Palm Beach County and Florida, 2016-2020

Year	Palm Beach County		Florida	
	Count	Rate	Count	Rate
2016	195	14.0	1,766	8.7
2017	201	14.2	1,845	9.0
2018	223	15.5	1,978	9.4
2019	219	15.0	2,031	9.5

DRAFT

Federal Health Professional Shortage Area (HPSA)

Health Professional Shortage Areas, or HPSAs, are geographic areas, populations, or facilities that have a shortage of primary, dental, or mental health care providers. HPSAs are designated by the Health Resources Services Administration (HRSA) and are eligible to receive certain federal resources with the aim of improving access to health care services in under-resourced communities.²⁰⁵

Each HPSA receives a score based on certain common criteria, including the population-to-provider ratio, percent of population below 100% of the Federal Poverty Level (FPL), and travel time to the nearest source of care outside of the HPSA designation area. Additional criteria are used for HPSA scoring for each of the primary care, dental, and mental health areas. Scores can range from 0 to 25 for Primary Care and Mental Health and from 0 to 26 for Dental Health. The greater the score, the greater the need.²⁰⁶

Looking at the tables, the HPSA FTE Short refers to the number of full-time equivalent (FTE) practitioners needed to achieve the population to practitioner target ratio in that HPSA.²⁰⁷

Primary Care Health

Primary Care Health Professional Shortage Areas

The table below shows the Primary Care Health Professional Shortage Areas in Palm Beach County as of October 2021. There were 9 total Primary Care HPSA designations in Palm Beach County. As previously mentioned, Primary Care areas can receive a score between 0 and 25. This figure below shows the Primary Care HPSA scoring process.

Figure 178: Primary Care HPSA Scoring

Source: Health Resources and Services Administration, Scoring Shortage Designations, 2021

With HPSA scores of 21 each, the highest need areas included Genesis Community Health, Inc. and the Health Care District of Palm Beach County, which are both Federally Qualified Health Center facilities. Additionally, Florida Community Health Centers, Inc. and Foundcare, Inc. both had HPSA scores of 19, and the Low Income Population HPSA of Lantana/Lake Worth had a HPSA score of 18.

Dental Health Care

Dental Health Professional Shortage Areas

The table below shows the Dental Health Professional Shortage Areas in Palm Beach County as of October 2021. There were 7 total designated areas in Palm Beach County. As previously noted, Dental HPSAs can receive a HPSA score between 0 and 26. The following table shows the Dental HPSA scoring process.

Figure 179: Dental HPSA Scoring

Source: Health Resources and Services Administration, Scoring Shortage Designations, 2021

The highest need areas included Florida Community Health Centers, Inc (HPSA Score 26), Foundcare, Inc. (HPSA Score 25), Genesis Community Health, Inc. (HPSA Score 25), and the Health Care District of Palm Beach County (HPSA Score 25), all of which were Federally Qualified Health Center facilities. The Low Income Population HPSA rural area of Belle Glade was not far behind with a score of 23. Five of the seven areas had HPSA scores over 20.

Table 306: Dental Health Professional Shortage Areas, Palm Beach County, As of October 2021

HPSA Name	Designation Type	HPSA FTE Short	HPSA Score	Rural Status
Boynton Beach	Low Income Population HPSA	25.382	15	Non-Rural

Mental Health Care

Mental Health Professional Shortage Areas

The table below shows the Mental Health Professional Shortage Areas in Palm Beach County as of October 2021. There were 6 total designated areas in Palm Beach County. As previously mentioned, Mental HPSAs can have a score between 0 and 25. Below is a figure showing the score process for Mental HPSAs.

Figure 180: Mental HPSA Scoring

Source: Health Resources and Services Administration, Scoring Shortage Designations, 2021

Foundcare, Inc., a Federally Qualified Health Center, had the highest HPSA score of 23. Florida Community Health Centers, Inc. had a score of 22 and Genesis Community Health, Inc. had a score of 20, both of which are also Federally Qualified Health Center facilities.

Table 307: Mental Health Professional Shortage Areas, Palm Beach County, As of October 2021

Federal Medically Underserved Areas/Populations

Federal Medically Underserved Areas/Populations (MUA/P) designate areas and populations with a lack of access to primary care services and help establish health maintenance organizations or community health centers. MUAs have a shortage of primary care services within a geographic area, such as a county, group of counties, or an urban census tract. MUPs have a specific population subset facing barriers to health care within a geographic area, such as people who are experiencing homelessness or migrant farm workers.²⁰⁸ HPSAs are designated by the Health Resources Services Administration (HRSA) and are therefore eligible to receive certain federal resources with the goal of improving access to health care services in under-resourced communities.²⁰⁹

Each MUA/P receives an Index of Medical Underservice (IMU) score calculated for the designated area or population. An area or population with an IMU score of 62.0 or below qualifies that area or population as a MUA/P, and scores can be between 0 and 100. The following figure shows the score process for MUA/Ps.

Figure 181: MUA/P Scoring

Source: Health Resources and Services Administration, Scoring Shortage Designations, 2021

Federal Medically Underserved Populations and Areas

The following table shows the Federal Medically Underserved Populations and Areas in Palm Beach County as of October 2021. There were 8 total designated populations and areas throughout the county. The two lowest IMU scores were given to Low Inc - Delray Beach with a score of 46.7 and Low Inc – Greenacres with a score of 47.5.

Table 308: Federal Medically Underserved Populations and Areas, Palm Beach County, As of October 2021

Service Area Name	MUA/P ID	Index of Medical Underservice Score	Rural Status	Designation Date
Low Inc - Boca Raton	07246	57.8	Non-Rural	07/26/2002
Low Inc - Boynton Beach	00570	56.2	Non-Rural	09/04/2002
Low Inc - Delray Beach	07279	46.7	Non-Rural	08/28/2002
Low Inc - Greenacres	07245	47.5	Non-Rural	07/25/2002
Low Inc - Lantana/ Lake Worth	07280	58.9	Non-Rural	08/28/2002
Low Inc - West Palm Beach	07064	59.9	Non-Rural	06/22/2001
Low Inc/ M F W - Belle Glade/ Pahokee	07531	53.6	Rural	05/11/1994
Low Income - Jupiter	07817	61.2	Non-Rural	04/15/2011

DRAFT

Health Insurance

Previous research suggests that having health insurance is a key determinant of being able to access routine, preventative, and comprehensive healthcare, which ultimately impacts health outcomes and risk of mortality.²¹⁰ A number of the leading causes of disability and disease can be prevented through early detection, which makes increasing health insurance coverage very important. While health insurance is only one factor mediating access to healthcare, it is crucial to improving the quality of life and achieving health equity in under-resourced communities.

Insured

Adults with Any Type of Health Care Insurance Coverage

The following table shows the percentage of adults with any type of health care insurance coverage in Palm Beach County and Florida in 2007, 2010, 2013, 2016, and 2019. While the percentage in Palm Beach County fluctuated during those years, it was higher than the overall state percentage each year. In 2019, 85.5% of Palm Beach County residents had any type of health insurance coverage compared to 84.2% of Florida residents.

Table 309: Adults with Any Type of Health Care Insurance Coverage, Palm Beach County and Florida, 2007, 2010, 2013, 2016, 2019

Year	Palm Beach County	Florida
2007	83.4%	81.4%
2010	89.7%	83.0%
2013	79.7%	77.1%
2016	85.8%	83.7%
2019	85.5%	84.2%

Health Insurance Coverage for Individuals with Disabilities, By Age

The table below shows the percentage of individuals with disabilities who have health insurance coverage by age in Palm Beach County and Florida in 2019. In Palm Beach County, 30.5% of individuals ages 65 and older had a disability, which was the largest proportion of any age group reported. Of those individuals, 99.0% had health insurance coverage. The largest population of disabled individuals without health insurance coverage were those ages 19 to 64, with 15.9% reporting having no health insurance coverage in 2019. This was higher than the state percentage of 14.9% of disabled individuals with no health insurance coverage ages 19 to 64 in 2019.

Table 310: Health Insurance Coverage for Individuals with Disabilities, By Age, Palm Beach County and Florida, 2019

	Palm Beach County		Florida

Uninsured Individuals, By Census County Division (CCD)

The following table shows the percentage of uninsured individuals in Palm Beach County by Census County Division (CCD) in 2019. The CCD with the largest percentage of uninsured individuals was the Lake Worth CCD with 23.6% of the total population uninsured. Of the individuals in the Lake Worth CCD, 60.0% ages 19 to 64 and 24.2% under 19 years of age were uninsured. The Belle Glade-Pahokee CCD also had the second largest percentage of uninsured individuals (21.9%). Of the individuals in the Belle Glade-Pahokee CCD, 57.2% ages 19 to 64 and 30.1% under 19 years of age were uninsured. The highest percentage of those 65 years and older that were uninsured was found in the Boca Raton CCD (31.4%) and Boynton Beach-Delray Beach CCD (31.4%).

Table 313: Uninsured Individuals, By Census County Division, Palm Beach County, 2019

	Percent of Total Population Uninsured			
	Total civilian noninstitutionalized population	Under 19 years	19 to 64 years	65 years and older

Medicaid

Median Monthly Medicaid Enrollment

This table below shows the median monthly Medicaid enrollment rate per 100,000 population in Palm Beach County and Florida from 2016 to 2020. For each year reported, the rate among Palm Beach County residents was lower than the rate among state residents overall. Notably, rate among Palm Beach County residents increased most recently from 2019 (14,618.5 per 100,000) to 2020 (16,845.3 per 100,000). However, this rate was much lower than the rate of 19,940.0 per 100,000 among Florida residents overall in 2020.

Table 314: Median Monthly Medicaid Enrollment, Palm Beach and Florida, 2016-2020

Year	Palm Beach County		Florida	
	Count	Rate	Count	Rate
2016	227,748	16,324.7	3,979,899	19,672.2
2017	235,972	16,723.1	4,030,447	19,607.4
2018	218,511	15,150.4	3,846,917	18,355.6
2019	213,222	14,618.5	3,766,453	17,709.0
2020	247,609	16,845.3	4,315,244	19,940.4

Children's Health Insurance Program (CHIP)

The Children's Health Insurance Program (CHIP) was established by the federal government in 1997 with the goal of providing health insurance coverage to uninsured children who are low-income and are not eligible for Medicaid. According to the Kaiser Family Foundation, children enrolled in state CHIPs have experienced increased access to care, utilization, and financial protection during economic downturns. Additionally, evidence suggests that children with Medicaid and CHIP have improved health, leading to better performance in school, which ultimately has positive implications for the overall economy.²¹¹

The CHIP provides federal funding to states for designing and regulating their state's CHIP program for low-income families. In Florida, *Florida Healthy Kids*, *MediKids*, and *Children's Medical Services (CMS)* make up the state's CHIP program.²¹²

Children's Health Insurance Programs

Children's Health Insurance Program Total Enrollment by Program

The following table shows the total enrollment numbers for the Children's Health Insurance Program (CHIP) in Palm Beach County as of August 2021.

Table 315: Children's Health Insurance Program Total Enrollment by Program, As of August 2021

Program	Palm Beach County
	Count
MediKids (Ages 1 - 4)	1,501
Healthy Kids (Ages 5 - 18)	11,142
Children's Medical Services (CMS) (Ages 1 - 18)	645
Total	13,288

Federally Qualified Health Centers (FQHC)

Federally Qualified Health Centers are community-based health care providers that receive funds from the HRSA Health Center Program to provide primary care services in underserved areas. They must meet a stringent set of requirements, including providing care on a sliding fee scale based on ability to pay, and must operate under a governing board that includes patients.²¹³

Federally Qualified Health Centers

The table below shows the Federally Qualified Health Centers in Palm Beach County as of 2021. There are five federally qualified health centers that serve the county.

Table 319: Federally Qualified Health Centers, Palm Beach County, 2021

Health Center Name	Street Address	City	ZIP Code
C. L. Brumback Primary Care Clinic - Mobile Clinic	1150 45th St	West Palm Beach	33407-2361

Food Access

Low food access is defined as being far from a supermarket, supercenter, or large grocery store. A census tract has low access status if there are at least 500 people or 33 percent of the population within the tract with low access. Low-income census tracts are defined as where the tract's poverty rate is greater than 20 percent, or where the tract's median family income (MFI) is less than or equal to 80 percent of the statewide MFI, or where the tract is in a metropolitan area and has an MFI less than or equal to 80 percent of the metropolitan area's MFI.

Low Income, Low Food Access Census Tracts

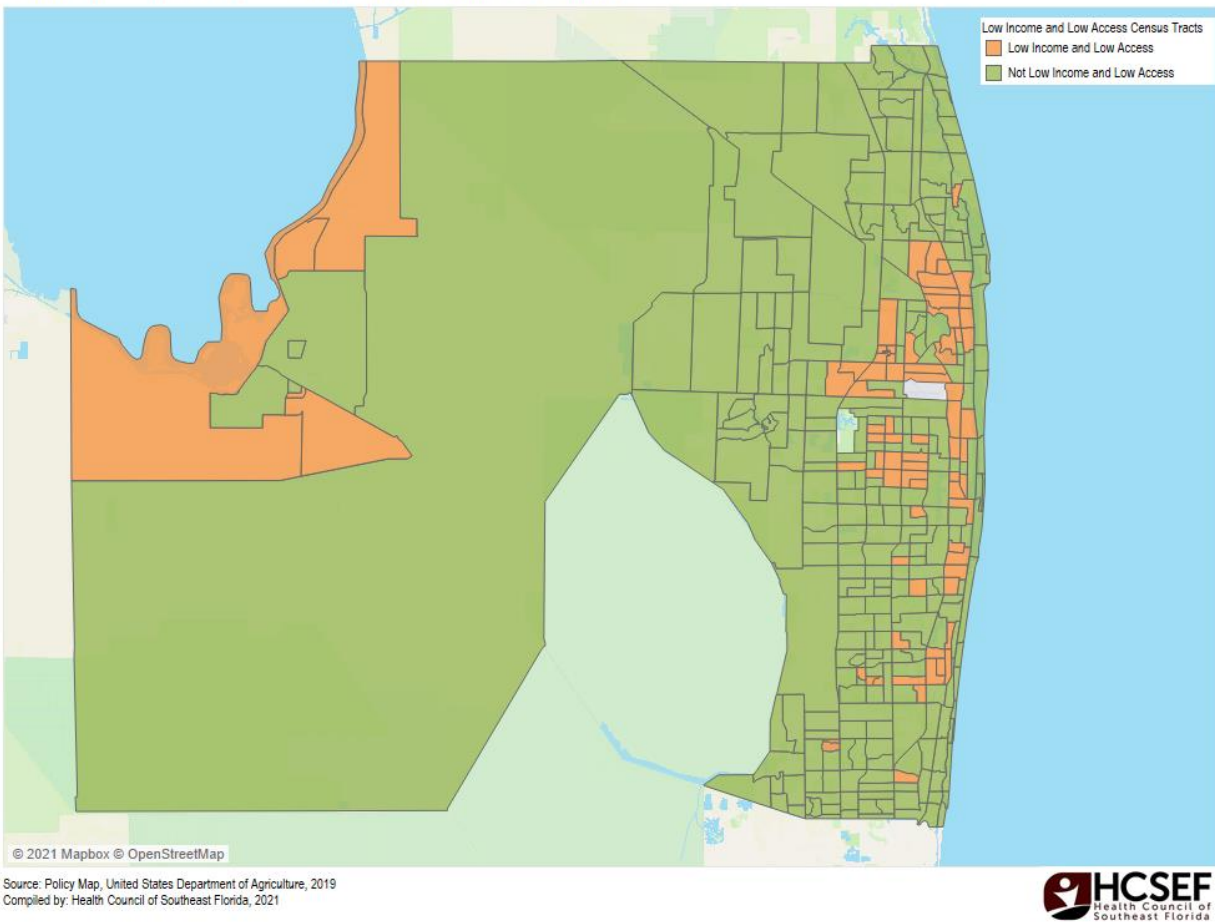

The figure below shows the low income, low food access census tracts in Palm Beach County based on 2019 data. In 2019, 23% (77) of census tracts were low income and low foods access census tracts.

To view an interactive map of Low Food Access and Low-Income Census tracts, visit:

Community Needs Index

The Community Needs Index (CNI) aggregates five factors associated with health needs: income, culture/language, education, housing status, and insurance coverage. A score of 1.0 indicates a ZIP Code with the lowest socioeconomic barriers (low need), while a score of 5.0 represents a ZIP Code with the most socioeconomic barriers (high need). The CNI captures multiple social determinants of health and highlights geographic areas that have significant disparities regarding access to healthcare services. Catholic Healthcare West found that residents of communities with the highest CNI scores were twice as likely to be hospitalized for conditions that can be managed in the primary or specialty care setting compared to communities with the lowest CNI scores.²¹⁴ Some of these conditions include asthma, pneumonia, or congestive heart failure.

Community Needs Index

The figure below shows the CNI by ZIP code in Palm Beach County in 2020. In 2020, 38% (20) census tracts were high need ZIP codes with a CNI score of 4.0 or higher.

To view an interactive map of the Community Needs Index, visit:

Child Opportunity Index

The Child Opportunity Index (COI) measures and maps the quality of resources and conditions that affect whether children grow up healthy in the neighborhoods where they live. This index combines data from 29 neighborhood-level indicators into a single composite measure.²¹⁵ Child Opportunity Scores are on a scale from 1 (lowest) to 100 (highest). Scores are then grouped into 'very low,' 'low,' 'moderate,' 'high', and 'very high'.

Child Opportunity Index

The figure below shows the COI in Palm Beach County from 2015 to 2020. The majority of Palm Beach County Zip codes scored high or very high. However, 28% of ZIP codes scored Low or Very Low. These ZIP codes were primarily located in the Glades Region of Palm Beach County, Lake Worth, and West Palm Beach.

Social Vulnerability Index

Social vulnerability refers to populations that are particularly vulnerable to disruption and health problems as a result of natural disasters, human-made disasters, climate change, and extreme weather. The social vulnerability index (SVI) was designed to help identify areas where residents are in greatest need of support and recovery assistance in the case of a disaster or extreme weather event. The index is comprised of four categories of vulnerability—socioeconomic status, household composition and disability, minority status and language, and housing and transportation. The four social vulnerability levels—Low, Low to Moderate, Moderate to High, and High—are defined by dividing all tracts or counties in the country into quantiles based on the SVI.²¹⁶

Social Vulnerability Index

The following figure shows the SVI by census tract in Palm Beach County in 2018. In 2018, nearly a quarter (80) census tracts had a high SVI, followed by 19% (64) that had a moderate social vulnerability index. Census tracts with a moderate or high SVI were concentrated in the Glades Region, West Palm Beach, and Lake Worth.

Acknowledgements

The Health Council of Southeast Florida would like to thank the Florida Department of Health in Palm Beach County and the Health Care District of Palm Beach County for their partnership and support for this Community Health Assessment. The leadership, guidance, and commitment displayed by both of these agencies makes efforts like this impactful and fruitful for partnering agencies, community members, and public health efforts across the county.

We would also like to express our sincerest thanks to the Glades region residents and community partners who shared their experiences and opinions throughout this process. These residents and partners gave a voice to their community throughout this process and will inspire change for the future of the Glades region and Palm Beach County.

“There is no power for change greater than a community discovering what it cares about.”

-Margaret J. Wheatley

Methodology

In 2021, the Health Care District of Palm Beach County and the Florida Department of Health in Palm Beach County engaged the Health Council of Southeast Florida (HCSEF) to facilitate a comprehensive community health assessment for both Palm Beach County and the Glades Region. The following report will focus on the information specific to the Glades region in an effort to identify health indicators within the community that present areas of concern, gaps in care, or services and opportunities for improvement.

The Glades Region Health Assessment includes information on the following areas:

- Demographics characteristics
- Socioeconomic characteristics
- COVID-19
- Maternal and child health
- Behavioral health
- Death, illness, and injury
- Infectious disease
- Health resource availability and access

This report includes quantitative secondary data from national, state and local database systems and primary qualitative data. Quantitative data were obtained from secondary sources, including but not limited to the: U.S. Census Bureau, Florida Agency for Health Care Administration (AHCA), Florida Department of Health (FDOH), Florida Department of Children and Families (DCF), Centers for Disease Control and Prevention (CDC), Florida's Bureau of Vital Statistics, Florida Department of Juvenile Justice and Florida Department of Education. Quantitative data tables and figures in this report are formatted to facilitate review, examination and utilization by the community. In many cases, the data, as it was gathered from the source, contained confidence intervals or margins of error, which are statistical calculations that refer to the potential variation in the numbers shown when the data is gathered from a subset of the population. These have been omitted from this assessment in an effort to make the data more approachable to the community. Some sources are only available for certain years based on data collection timelines therefore, results from those sources may be presented in varying years or multi-year estimates. Where available, five-year estimates from the US. Census Bureau were used to capture the most complete data for the report. In addition, the most recent full-year data sets were used for indicators throughout the report. Data is presented throughout the report in as much detail as possible, including data disaggregated by race, ethnicity, sex, age, or Census County Division (CCD).

The qualitative data are a result of primary data collection efforts through local public health system assessments, focus groups and key informant interviews. Data was collected, analyzed and compiled for this assessment to enable and guide Palm Beach County service providers, educators, planners, funders and community leaders in identifying areas within the community that should be addressed to improve the health and wellbeing of Glades region residents.

Demographic and Socioeconomic Profile

The geographic region commonly referred to as “The Glades” (also referred in this assessment as the “Glades Region”) is in the western part of Palm Beach County and along the southeastern rim of Lake Okeechobee. Four communities make up this vast and mostly agricultural region: South Bay, Belle Glade, Canal Point and Pahokee.

The City of South Bay is settled at the crossroads of East-West State Road 80 and North-South U.S. 27 intersect. The city is a haven for agriculture and recreation, with its rich black soil and vast lake waters. Although the population in Palm Beach County has increased significantly in the last decade, South Bay has remained smaller with an estimated 5,532 residents within its city limits.

Belle Glade is the largest city within the 2,862,000-acre subtropical Everglades in the heart of Florida. The city was incorporated in 1928 with a population of less than 500 at the time. That population has grown to over 23,000. From its incorporation to present day, agriculture has played a significant role in the area’s development.

Canal Point was founded in 1914 and is located on the Southeast shore of Lake Okeechobee in Northwest Unincorporated Palm Beach County. It a census-designated place (CDP) with a population of 367 residents.

The City of Pahokee was founded in the early 1900’s and was named after the Seminole word “Pahokee” meaning “grassy waters.” In 1992, Pahokee was incorporated as a city by the Municipal Government. That population has grown to over 8,000. It is a relatively small city with a total area of 5.4 square miles, with residents referring to it as Palm Beach County’s “Other” coast due to its proximity to Lake Okeechobee.

As of 2019, these four communities have a combined population of 37,584, which makes up 3% of the Palm Beach County population. Forty-seven percent of the population in Glades Region identify as African American and over a quarter identify as Hispanic or Latino, which is higher than the county. With such diversity it is imperative to understand the context for the disenfranchisement and marginalization of the population and subpopulations that currently exist in the Glades region and, in fact have persisted for many years. This region is also federally designated as a rural community, which have unique barriers compared to urban areas.

Demographics include factors such as race and ethnicity, age, English language proficiency, household type, population density, etc., all of which influence health outcomes. The aim of the demographic and socioeconomic profile is to provide context for the remaining sections by providing an overview of the demographic and socioeconomic characteristics of the residents of South Bay, Belle Glade, Canal Point and Pahokee.

To aid in the identification of barriers and gaps, regional data is presented alongside county data when applicable. The selected indicators provide background context for specific health needs in the community and provide information imperative to the identification of barriers and gaps in the health care system. It is important to note that although the county is not designated rural by federal entities, the Glades region has been denoted as a state-designated priority rural area. South Bay, Belle Glade, and Pahokee are also designated rural areas of critical economic concern by the state.

Demographic Characteristics

Population

Total Population

The table below shows the total population in the Glades region of Palm Beach County in 2019. According to the 2019 American Community Survey conducted by the U.S. Census Bureau, the Glades region made up 2.6% of Palm Beach County's population. Overall, the Glades region had 37,584 residents residing in ZIP codes 33430, 33438, 33476, and 33493.

Population by ZIP Code

This table depicts the Glades ZIP codes and their respective populations in 2019. Among the Glades region ZIP codes, Belle Glade (33430) made up the largest portion of the Glades region population in 2019, with 23,172 residents or 61.7% of the Glades region population. The ZIP code with the smallest population was Canal Point, with 367 residents or 1.0% of the Glades region population.

Table 2: Population by ZIP Code, Glades Region, 5-Year Estimate, 2019

DRAFT

Population by Age

By 2030, one out of every six people will be aged sixty years or older.¹ The table below shows the population by age in the Glades region of Palm Beach County in 2019. Among the Glades region ZIP codes, Canal Point (33438) had the oldest median age of 48.7 years, exceeding the county's median age by nearly four years. The Pahokee ZIP Code (33476) had the youngest median age among Glades region ZIP codes, with a median age of 31.2 years. The median age in Palm Beach County was 44.8 years.

Table 3: Population by Age, Glades Region and Palm Beach County, 5-Year Estimate, 2019

DRAFT

Population by Race and Ethnicity

Health disparities exist among certain racial and ethnic populations, including poorer health outcomes, disproportionate access to care, and overall inequities related to the diagnosis and treatment of health conditions. To that end, certain racial and ethnic populations suffer from higher rates of chronic disease and premature death as compared to their White counterparts.² For these reasons, it is important to understand the racial and ethnic makeup of a community's population as a whole.

The following table shows the population by race and ethnicity in the Glades region of Palm Beach County in 2019. Among the Glades region ZIP codes, over half of the population was Black or African American in Belle Glade (57.5%), Pahokee (66.4%), and South Bay (52.9%). Over half of the residents in Canal Point were of Hispanic or Latino (54.8%) origin.

Table 4: Population by Race and Ethnicity, Glades Region and Palm Beach County, 5-Year Estimate, 2019

Figure 4: Population by Ethnicity, Glades Region and Palm Beach County, 2019

Population by Sex

Sex is an important characteristic to consider when planning and implementing health interventions and programs in the community, because it is shown to be a significant determinant of health outcomes. Males and females can have varying responses to pain, and different sexes may be more or less susceptible to disease. For example, about 80% of those affected by autoimmune diseases are female, but autoimmune conditions in males are typically more severe.³

The table below depicts the Palm Beach County and Glades region populations by sex in 2019. The percentage of males and females in Palm Beach County is fairly evenly divided (48.5% and 51.5%, respectively). Among the Glades region ZIP codes, South Bay reported the largest differences, with 84.9% of the population reporting as male and 15.1% reporting as female in 2019.

Table 5: Population by Sex, Glades Region and Palm Beach County, 5-Year Estimate, 2019

Population by Census County Division (CCD)

A Census County Division (CCD) is an established area set by the U.S. Census Bureau and state and local governments. CCDs offer a way to group smaller sub-sections of the county, which can be beneficial in understanding the health of certain regions. There are eleven CCDs in Palm Beach County.

The following table shows the population by CCD in Palm Beach County in 2019. The Glades CCD is the smallest, with 309 residents, followed by the Belle Glade-Pahokee CCD with 37,326 residents and the Western Community CCD with 30,844 residents.

Table 6: Population by Census County Division (CCD), Palm Beach County CCDs, 5-Year Estimate, 2019

Census County Division	Count	Percent
Total Population	1,465,027	100%
Belle Glade-Pahokee CCD	37,326	2.5%
Boca Raton CCD	138,198	9.4%

Figure 5: Population by Census County Division, Palm Beach County CCDs, 2019

Population by Place of Birth

A person's place of birth can influence cultural preferences and language, and culture itself can influence health decisions, making it an important consideration when analyzing the health of a community. The table below shows the population by place of birth in the Glades region of Palm Beach County in 2019. The first table depicts the foreign-born population by place of birth globally, while the second table focuses on those born in the Americas. Among the Glades region ZIP codes, Belle Glade had the highest count of foreign-born residents with 6,990, while Canal Point had the lowest with 58. Most foreign-born residents in the Glades region ZIP codes were born in the Americas, specifically Latin America (9161).

Table 7: Population by Place of Birth, Glades Region and Palm Beach County, 5-Year Estimate, 2019

Population by Language Spoken at Home

Language is an important consideration when designing, implementing, and improving health interventions, marketing campaigns, and programs. For those who do not speak English, language can be a barrier to accessing and receiving quality medical care. It is important to consider languages spoken at home when evaluating and understanding health in the community.

The following table shows languages spoken at home among residents in the Glades region of Palm Beach County in 2019. Among Glades region residents who spoke a language other than English, Spanish was the most popular language spoken at home; 31.2% in Belle Glade, 49.6% in Canal Point, 19.5% in Pahokee, and 21.9% in South Bay.

Households

Housing is a critical component affecting the health and well-being of a community. Research shows that community-wide efforts to stabilize housing improve health outcomes and decrease health care costs for residents.⁴ Furthermore, additional studies show that renting a home may increase the association between unaffordable housing and self-rated health as compared to owning a home. Studies have shown that those who live in unaffordable housing have increased odds of poor self-rated health.⁵ Understanding the influences of housing on health can help policy makers and public health leaders address this social determinant of health.

The chart below depicts the housing characteristics in Palm Beach County and the Glades region in 2019. While Palm Beach County had a large majority of owner-occupied units (68.9%) compared to renter-occupied units (31.1%), Belle-Glade and Pahokee report an opposite trend, with 69.9% of units in Belle Glade occupied by renters and 65.4% of units in Pahokee occupied by renters. Across Palm Beach County (8.2), Belle Glade (6.9), Canal Point (6.4), Pahokee (2.1), and South Bay (12.7), rental vacancy rates greatly exceeded the rates among homeowners. Among these areas, the average household size of owner-occupied units was typically higher than that of renter-occupied units.

Population Living with a Disability

Residents living with a disability face increased challenges based on the type of limitation and condition underlying the disability. These challenges cause health and socioeconomic disparities, creating complex needs and situations for residents. Research shows that adults with disabilities are four times more likely to report their health as either fair or poor compared to people with no disabilities.⁶ It is important to understand the challenges facing these residents to plan and implement appropriate health interventions and programs.

The following table depicts the percent of the population living with a disability in Palm Beach County and each of the eleven Census County Divisions (CCD). The Boynton Beach-Delray Beach CCD had the highest percentage of the population with a disability (14.9%), exceeding the county's overall percentage of the population with a disability (12.3%). The Glades CCD had the lowest percentage of the population with a disability (6.1%).

Table 11: Population Living with a Disability, by Census County Division, Palm Beach County CCDs, 5-Year Estimate, 2019

Geographic Area	Population with a Disability	Percent of Population with a Disability
Palm Beach County, Florida	178,306	12.3%

Population Living with a Disability, By Age and Type

The table below depicts the percent of the population living with a disability in 2019 by age and type for Palm Beach County and the Glades region. Across all age groups in the Glades region ZIP codes, those ages 65 years and older had a larger percentage of the population with a disability as compared to other age groups, with 12.1% in Belle Glade, 0.0% in Canal Point, 14.5% in Pahokee, and 6.5% in South Bay with a disability. Overall, ambulatory difficulties affected the most individuals with a disability in Palm Beach County (7.0%), Belle Glade (7.1%), and South Bay (6.5%), while cognitive difficulty affected the most in Pahokee (9.1%). This was more than double the percentage affected by cognitive difficulty in Palm Beach County (4.2%), South Bay (3.6%), and Canal Point (0.0%) and exceeded the percentage in Belle Glade (5.2%).

Socioeconomic Characteristics

Poverty

Poverty Status in the Past 12 Months, By Age and Sex

Poverty status is an indicator of need in a community. Those in poverty experience increased challenges that affect healthcare access and utilization.⁷ Nationally, poverty rates among women remain higher than their male counterparts.⁸

The table below shows poverty status by age and sex in the Glades region and Palm Beach County in 2019. In Palm Beach County, 13.2% of females were living below the poverty level compared to 11.1% of males, while 46.4% of females in Belle Glade were living below the poverty level and 34.3% of females in South Bay were living in poverty. Overall, the Pahokee had the highest percentage of residents living below the poverty level (43.0%) followed by Belle Glade (41.8%).

The Healthy People 2030 national target is to reduce the proportion of people living in poverty to 8.0%. The most recent national data shows 11.8% of the population was living below the poverty threshold in 2018. As of 2019, Palm Beach County's percent of the population below the poverty level (12.2%) is not yet meeting this target. Among the Glades region ZIP codes, Canal Point (4.6%) met the target in 2019, but Belle Glade (41.8%), Pahokee (43.0%), and South Bay (30.5%) greatly exceeded the target.

Poverty Status in the Past 12 Months, By Race and Ethnicity

Black and Hispanic populations are more likely to live in poverty compared to other populations. The U.S. Census reports that in 2019, Black residents made up 13.2% of the United States population but accounted for 23.8% of the population in poverty. Similarly, Hispanic residents made up 18.7% of the total United States population in 2019 but accounted for 28.1% of the population in poverty.⁹ It is important to consider the complex intersection of race, ethnicity, poverty, and the increased health risks that each of these groups experience.

The table and graphs below show poverty status by race and ethnicity in the Glades region and Palm Beach County in 2019. In 2019, nearly half of the Black or African American population was living in poverty in Belle Glade (47.7%) and Pahokee (49.0%). Of all areas in the Glades region, Belle Glade (37.0%) and Pahokee (32.8%) had the highest percentage of Hispanic or Latino residents living in poverty.

Figure 7: Poverty Status i the Past 12 Months by Ethnicity, Glades Region and Palm Beach County

Family Poverty Status in the Past 12 Months

Families in poverty experience unique needs and challenges. Families in poverty may experience barriers to accessing transportation and needed services due to financial hardship. These families are also at an increased risk of living in unsafe or inadequate housing conditions, creating a further strain. Additionally, the stigma and stressors related to living in poverty can affect both parents and children individually, as well as the general family dynamic.¹⁰

The following table shows the family poverty status in the Glades region and Palm Beach County in 2019. In Pahokee, 54.1% of families with a child under 18 years of age were living in poverty in 2019. Belle Glade and South Bay had similar percentages, with 47.4% of families with a child under the age of eighteen years living in poverty in Belle Glade and 37.2% in South Bay. These figures are significantly higher than the percentage for Palm Beach County as a whole (14.1%).

Table 15: Family Poverty Status in the Past 12 Months, Glades Region and Palm Beach County, 5-Year Estimate, 2019

	Palm Beach County		Belle Glade (33430)		Canal Point (33438)		Pahokee (33476)		South Bay (33493)	
	Total Population	Percent below poverty level	Total Population	Percent below poverty level	Total Population	Percent below poverty level	Total Population	Percent below poverty level	Total Population	Percent below poverty level

Income

Per Capita Income and Earnings

Residents with higher income and earnings are typically able to afford adequate health insurance, obtain timely and quality healthcare services, and take part in routine medical appointments and medication regimens. As a result, higher-income individuals tend to see improved health outcomes as compared to their lower-income counterparts. Income inequality is a growing issue in the United States, resulting in increased health disparities among various populations.¹¹

The following table depicts per capita income and earnings in Palm Beach County and the Glades region in 2019. Overall, Palm Beach County had a significantly higher per capita income (\$39,933.00) compared to all of the Glades region ZIP codes. Belle Glade reported a per capita income of \$13,564.00, Canal Point reported a per capita income of \$22,936.00, Pahokee reported a per capita income of \$12,888.00, and South Bay reported the lowest per capita income of \$6,625.00 in 2019.

Table 16: Per Capita Income and Earnings, Glades Region and Palm Beach County, 5-Year Estimate, 2019

	Palm Beach County	Belle Glade (33430)	Canal Point (33438)	Pahokee (33476)	South Bay (33493)
Per capita income	\$39,933.00	\$13,564.00	\$22,936.00	\$12,888.00	\$6,625.00
Nonfamily households	208,797	3,144	9	1,009	134
Median nonfamily income	\$40,985.00	\$12,307.00	--	\$15,570.00	\$19,063.00
Mean nonfamily income	\$66,323.00	\$21,586.00	--	\$21,629.00	\$23,537.00
Median earnings for workers	\$32,308.00	\$21,917.00	\$23,333.00	\$19,311.00	\$19,439.00
Median earnings for male full-time, year-round workers	\$49,093.00	\$32,467.00	--	\$28,239.00	\$35,365.00
Median earnings for female full-time, year-round workers	\$41,982.00	\$26,812.00	\$31,250.00	\$28,829.00	\$30,000.00

Household Income and Benefits

Household income also serves as a socioeconomic indicator for healthcare access and affordability. Those with a lower household income face increased challenges in obtaining the timely medical care that they need.

The table below depicts household income and benefits in the Glades Region and Palm Beach County in 2019. The median household incomes for Belle Glade (\$24,625.00), Canal Point (\$58,750.00), Pahokee (\$22,919.00), and South Bay (\$31,850.00) were each less than that of Palm Beach County (\$63,299.00). Additionally, while 9.8% of Palm Beach County residents used SNAP assistance in the last twelve months in 2019, these percentages were greater in Belle Glade (39.1%), Canal Point (10.5%), Pahokee (44.0%), and South Bay (39.8%). This indicates a significant increase in need in these areas as compared to the county.

Table 17: Household Income and Benefits, Glades Region and Palm Beach County, 5-Year Estimate, 2019

Family Income and Benefits

Family income is another socioeconomic determinant of health. Both income and income inequality affect health outcomes, especially for those in lower socioeconomic classes. Income inequality research has shown that median family income is negatively correlated with birth outcomes, including preterm births, low infant birth weight, very low infant birth weight, and infant mortality, making this an important indicator of health.¹² Similar to other income indicators, Belle Glade (\$32,392.00), Canal Point (\$56,250.00), Pahokee (\$30,458.00), and South Bay (\$41,518.00) had a much lower median family income than Palm Beach County (\$78,370.00) as a whole.

Table 18: Family Income and Benefits, Glades Region and Palm Beach County, 5-Year Estimate, 2019

Gini Index

The Gini Index is a measurement of income distribution throughout areas within the county. A Gini Index value will vary between 0 and 1 based on resident income in the defined area. A value of 0 indicates perfect income equality, where there is an equal distribution of income among the residents. A value of 1 indicates perfect inequality, where one household possesses all of the income and other households do not have any income.

The below chart depicts the Gini Index for Palm Beach County and the Glades region in 2019. Among the Glades region ZIP codes, Canal Point (0.223) had the most equal income distribution based on the Gini Index.

Table 19: Gini Index, Glades Region and Palm Beach County, 5-Year Estimate, 2019

Business and Employment

Employment Status

Well-paying and stable jobs increase an individual's ability to live in a safe neighborhood, obtain education for their children, secure childcare services, and purchase healthy foods. Compared to their employed counterparts, unemployed Americans are more likely to be diagnosed with depression and have poorer health outcomes, including an increased risk of developing a stress-related condition such as stroke, heart attack, heart disease, or arthritis.¹³ Moreover, additional research shows that quality, stable employment is shown to reduce these health concerns, and mortality rates and rates of chronic disease are lower among employed individuals compared to unemployed individuals.¹⁴

The table below depicts employment status in the Glades region and Palm Beach County in 2019. The unemployment rate was higher in all four Glades region ZIP codes, Belle Glade (14.5%), Canal Point (30.0%), Pahokee (24.7%), and South Bay (11.4%), compared to Palm Beach County (5.9%).

Table 20: Employment Status, Glades Region and Palm Beach County, 5-Year Estimate, 2019

DRAFT

Employment by Industry

Different industries are associated with varying health risks, work hours, and socioeconomic statuses of employees. Understanding a population's employment by industry can give valuable insight into the needs, relevant services, and lifestyles of residents to better target health interventions, marketing, and programs. Jobs that are typically categorized as "blue-collar" are indicative of increased physical demands and low flexibility of work hours. Alternatively, "white-collar" jobs are more likely to experience high time pressure, regular overtime, and frequent interruptions or poor work-life balance. Additionally, evidence shows that morbidity and mortality increase as social or socioeconomic status decrease. Despite this, studies have shown that social support at work and job security are not clearly related to occupational class or to socioeconomic or educational status.¹⁵

This table shows employment by industry in the Glades region and Palm Beach County in 2019. Most employed residents in Palm Beach County (20.9%), Belle Glade (19.9%), Pahokee (17.6%), and South Bay (28.1%) worked in educational services, healthcare, or social services compared to any other industry in those areas.

Table 21: Employment by Industry, Glades Region and Palm Beach County, 5-Year Estimate, 2019

Employment by Occupation

Similar to employment by industry, employment by occupation is an important factor to consider to understand the potential needs of a community. Studies show that workers with lower educational and occupational status are more likely to report poor self-rated health, limited physical functioning, and absences due to sickness.¹⁶

The table below shows the employment by occupation in the Glades region and Palm Beach County in 2019. In Belle Glade (24.6%), Pahokee (30.4%), and South Bay (26.4%), service occupations made up the largest percentage of occupations for employed residents over age 16. In Canal Point, over half (59.5%) of employed residents over age 16 worked in management, business, science, or arts occupations.

Table 22: Employment by Occupation, Glades Region and Palm Beach County, 5-Year Estimate, 2019

Class of Worker

Worker class can be an indicator of health insurance availability through the workplace and can give providers and health organizations insight on the potential needs of residents.

The table below depicts the class of worker for all residents employed over the age of 16 in the Glades region and Palm Beach County in 2019. Across all areas, a majority of employed residents are private wage and salary workers, with 80.0% in Belle Glade, 81.6% in Canal Point, 77.4% in Pahokee, 78.5% in South Bay, and 83.1% in Palm Beach County overall.

Table 23: Class of Worker, Glades Region and Palm Beach County, 5-Year Estimate, 2019

Education

Public School Enrollment

Education and health have an established, positive association.¹⁷ Educational programs and early learning programs are critical to childhood social and emotional development, and these experiences serve as a catalyst for children to develop skills, relationships, and interests that shape their future. Research shows that early learning educational programs lead to enhanced literacy, language, math, and self-regulation skills. For children who are dual language learners or from lower income households, these positive results were greater when early learning programs were attended.¹⁸ School enrollment is also an indication of population growth and can inform service delivery planning and implementation.

The following table depicts public school enrollment in the Glades region and Palm Beach County in 2019. Elementary school students comprised the largest percentage of students enrolled in school in Belle Glade (43.0%) and Pahokee (40.3%). South Bay had the largest percentage of its students enrolled in high school, with 56.6% enrolled, and Canal Point had the largest percentage enrolled in college or graduate school (54.7%).

Table 24: Public School Enrollment, Glades Region and Palm Beach County, 5-Year Estimate, 2019

	Palm Beach County		Belle Glade (33430)		Canal Point (33438)		Pahokee (33476)		South Bay (33493)	
	Count	Percent	Count	Percent	Count	Percent	Count	Percent	Count	Percent
Population 3+ years enrolled in school	324,367	100%	6,311	100%	64	100%	2,308	100%	1,430	100%

Educational Attainment

Educational attainment is positively correlated with life expectancy. Research shows that increased education can lead to more stable jobs, increased pay and benefits, and the provision of health insurance provided by an employer. These elements can increase an individual's access to care, leading to positive health outcomes.¹⁹

The table below depicts educational attainment in the Glades region and Palm Beach County in 2019. It is significant to note that the percentage of residents aged 25 years and over who reported obtaining less than a ninth-grade education was 21.5% in Belle Glade, 7.1% in Canal Point, 17.4% in Pahokee, and 10.6% in South Bay, all much higher than the 5.8% reported in Palm Beach County.

Table 25: Educational Attainment, Glades Region and Palm Beach County, 5-Year Estimate, 2019

	Palm Beach County		Belle Glade (33430)		Canal Point (33438)		Pahokee (33476)		South Bay (33493)

DRAFT

Graduation Rates

High school graduation rates have been referred to as a “barometer” of health due to the association between education and health and progress in a community.²⁰

The table and graph below show graduation rates in the Glades region and Palm Beach County from the 2016 – 2017 school year through the 2019 – 2020 school year. Glades region graduation rates increased from 58.9% in the 2017 – 2018 school year to 80.5% in the 2019 – 2020 school year. Despite the increase, the Glades region average was still below the Palm Beach County rate of 90.2% in the 2019 – 2020 school year.

The Healthy People 2030 national target is to increase the proportion of high school students who graduate in four years after starting ninth-grade to 90.7%. The most recent national data shows that 85.8% of students graduated with a regular diploma in the 2018 – 2019 school year four years after starting ninth-grade. While Palm Beach County does not specify graduation within four years of starting ninth-grade, the data does show that Palm Beach County is close to reaching a target graduation rate, with rates reaching 90.2% in the 2019 – 2020 school year. The Glades region is farther off target, with a graduation rate of 80.5% in the 2019 – 2020 school year.

Figure 8: Graduation Rates, Glades Region and Palm Beach County, School Year 2016 – 2017 through 2019 – 2020

	2016-2017	2017-2018	2018-2019	2019-2020
Palm Beach County	85.0%	87.2%	87.1%	90.2%
Glades Region Average	65.3%	58.9%	72.4%	80.5%

School Grades by Year

School grades, assigned by the Florida Department of Education, are an indicator of individual school performance throughout the county and serve as a way for the Department to communicate how well each school is serving its students. It is important to note that on March 23, 2020 the Florida Department of Education Emergency Order No. 2020-EO-1 was issued and subsequently cancelled all spring K-12 statewide assessment tests. As such, accountability measures for the 2019 – 2020 school year that used statewide assessment data were not fully calculated. Additionally, on April 9, 2021, Florida Department of Education Emergency Order No. 2021-EO-02 made 2020 – 2021 school grades optional and gave schools the ability to choose to opt-in to this measure.²¹

This table shows the school grades by year in the Glades region from 2015 to 2019. During this timeframe, 0% of schools received an A rating from the Florida Department of Education in the Glades region. From 2016 to 2019, a majority of schools received a C rating each year, an improvement from the 45.5% of schools that received a D rating in 2015. Additionally, the percentage of schools receiving a B grade increased incrementally from 2017 (0%) to 2019 (16.7%). The schools included in the data were: Belle Glade Elementary School, Belvedere Elementary School, Glade View Elementary School, Glades Academy, Inc., Glades Central High School, Gove Elementary School, K. E. Cunningham/Canal Point Elementary, Lake Shore Middle School, Pahokee Elementary School, Pahokee Middle-Senior High, Pioneer Park Elementary School, and Rosenwald Elementary School.

Table 26: School Grades by Year, Glades Region, 2015-2019

School Grade	2015		2016		2017		2018		2019	
	Count	Percent	Count	Percent	Count	Percent	Count	Percent	Count	Percent
A	0	0%	0	0%	0	0%	0	0%	0	0%
B	0	0%	1	8.3%	0	0%	1	8.3%	2	16.7%
C	3	27.3%	9	75.0%	10	83.3%	8	66.7%	9	75.0%
D	5	45.5%	1	8.3%	2	16.7%	2	16.7%	1	8.3%
F	3	27.3%	1	8.3%	0	0%	1	8.3%	0	0%
Total	11*	--	12	--	12	--	12	--	12	--

Note: *In 2015, only 11 out of the 12 reporting Glades region schools received a letter grade. Glades Academy, Inc. did not receive a letter grade in 2015.

Note: Pursuant to FDOE Emergency Order No. 2021-EO-02, only schools for which an opt in request was submitted by the school district superintendent or charter school governing board have a letter grade assigned for the 2020-21 school year. More information can be found at <https://www.fldoe.org/core/fileparse.php/19861/urlt/2021-EO-02.pdf>.

Public Assistance Benefits

Students Qualifying for Free and Reduced Lunch

Free and reduced-price lunches are proven to reduce food insecurity, obesity rates, and poor health among students. School lunches offer an opportunity for children to have a nutritious meal at school that follows the standards of the National School Lunch program.²² In the Glades region, an average of 97.1% of students were eligible for the school lunch program in the 2020 – 2021 school year. This is significantly higher than in Palm Beach County as a whole, where 65.1% of students were eligible that same school year.

Table 27: Students Qualifying for Free and Reduced Lunch, Glades Region and Palm Beach County, School Year 2020 – 2021

	Total Students	Percent Eligible	# of Free Lunch Students	# of Reduced-Price Lunch Students	# of Provision 2 Students	# of Direct Certification CEP Students

SNAP Participation

The United States' anti-hunger program, The Supplemental Nutrition Assistance Program (SNAP), has been proven to improve health outcomes and lower healthcare costs for participants. This program also serves as an indication of need in an area. Overall, food insecurity is shown to increase the risk of adverse health outcomes and is linked with higher health care costs. Food insecurity can also complicate an individual's ability to manage illness, further complicating health issues. Research has shown that food insecurity is strongly correlated with chronic health conditions among children, working-age adults, and seniors. SNAP works to increase food security and offers benefits that enable families to purchase healthier foods while saving money that can be used towards other health-promoting activities and medical care. Studies show that SNAP participants are more likely to report excellent or very good health compared to low-income non-SNAP participants.²³

The table below depicts SNAP participation by ZIP code among age groups in the Glades region as of September 2021. Notably, approximately half of Glades region residents were SNAP recipients in September 2021. Among the Glades region ZIP codes, Canal Point had the highest percentage of the population utilizing SNAP (56.7%) and South Bay had the smallest (48.6%).

There is no Healthy People 2030 national target directly related to SNAP participation.

Table 29: SNAP Participation, Glades Region, September 2021

ZIP Code		Population Estimate*	Age 17 & Under Receiving SNAP	Age 18-59 Receiving SNAP	Age 60 & Above Receiving SNAP	Total SNAP Recipients	Percentage of the Population SNAP
33430	Belle Glade	23,172	6,696	3,396	1,362	11,454	49.4%
33438	Canal Point	367	111	76	21	208	56.7%
33476	Pahokee	8,513	2,758	1,441	478	4,677	54.9%

Housing

Householder Living Alone

Social isolation can have a significant impact on health and is shown to increase an individual's risk of premature death from all causes. Social isolation is also associated with a 50% increase in the risk of dementia. Loneliness, a common factor related to social isolation, is associated with higher rates of depression, anxiety, and suicide. Older adults are at an increased risk for this isolation as they are more likely to live alone compared to other age groups.²⁴

This table depicts householders living alone and householders ages 65 years and older living alone in the Glades region and Palm Beach County in 2019. Belle Glade (37.7%), Pahokee (29.2%), and South Bay (24.4%) had similar rates of householders living alone as Palm Beach County (31.0%). Pahokee (6.9%), South Bay (9.9%), and Canal Point (0.0%) had lower percentages of householders living alone over the age of 65 years compared to Palm Beach County (16.8%) and Belle Glade (16.2%).

Table 30: Householder Living Alone, Glades Region and Palm Beach County, 5-Year Estimate, 2019

Housing Value

As noted, housing that is stable, affordable, safe, and well-maintained is vital for community health and development.²⁵ Housing value is an indicator of the cost of living and economic stability.

The table and graph below depict the distribution of housing values in Palm Beach County and the Glades region in 2019. The median housing values in the Glades region ZIP codes, \$111,500.00 in Belle Glade, \$107,800.00 in Canal Point, \$98,200.00 in Pahokee, and \$82,200.00 in South Bay, were much lower than that of \$283,600.00 in Palm Beach County in 2019.

Table 31: Housing Value, Glades Region and Palm Beach County, 5-Year Estimate, 2019

Figure 10: Housing Value, Glades Region and Palm Beach County, 2019

Gross Rent

Average rent is an important economic indicator in regards to understanding the health status of a community. Residents who face disproportionate rent costs compared to their income often face increased economic challenges, which can further impact the ability to access healthcare services.

This table shows the gross rent in the Glades region and Palm Beach County in 2019. The median cost of rent in the Glades region ZIP codes, \$601.00 in Belle Glade, \$581.00 in Pahokee, and \$803.00 in South Bay, was significantly less than that of \$1,398.00 in Palm Beach County in 2019. Data for median cost of rent was unreported for Canal Point.

Transportation

Vehicles Available by Household

Transportation is frequently cited as a barrier to accessing healthcare services, resulting in missed appointments or delayed care by residents who do not have the ability to physically attend medical appointments or pharmacies. Residents with transportation barriers tend to miss medical care appointments, leading these residents to experience poorer health outcomes.²⁶

The following table depicts vehicles available by household, which is an important indicator when understanding transportation in the community, in the Glades region and Palm Beach County in 2019. In Belle Glade (25.3%) and Pahokee (23.6%), nearly one-quarter of the residents have no vehicles available, much higher than the 6.1% of Palm Beach County residents without a vehicle available.

Table 33: Vehicles Available by Household, Glades Region and Palm Beach County, 5-Year Estimate, 2019

	Palm Beach County		Belle Glade (33430)		Canal Point (33438)		Pahokee (33476)		South Bay (33493)

Crime

Total Arrests

According to the Centers for Disease Control and Prevention, violence is now widely recognized as a public health issue.²⁷ Individuals may experience negative physical, mental, and emotional impacts as a direct victim or witness to violence. Research shows that exposure to violence in childhood can lead to an increased risk for substance abuse, risky sexual behavior, and unsafe driving behavior in adulthood. Violence can also impact a community at-large. When people feel unsafe, they have a decreased sense of community and are less likely to engage in outdoor physical activity or wellness activities. As a result, violence has a negative impact on all community members. Arrests are one indicator of crime and violence in a community.

The following table depicts the total arrests by law enforcement agencies serving the Glades region and Palm Beach County in 2019. The South Bay Police Department had the lowest arrest rate of 891.8 per 100,00 population, while the Palm Beach County Sheriff's Office had the highest rate of 2,496.9 per 100,000 population.

Table 34: Total Arrests, Glades Region and Palm Beach County, 2019

Agency/County	Population	Total Arrests	Arrest Rate per 100,000	Total Adult Arrests	Total Juvenile Arrests
Palm Beach County	1,447,857	40,492	2,796.7	37,272	3,220
Palm Beach County Sheriff's Office	632,793	15,800	2,496.9	14,492	1,308
Belle Glade Police Department	17,979	423	2,352.7	401	22

Arrests by Charge, Index Arrests

Further analysis of arrests in the Glades region shows the types of Index Arrests made by each law enforcement agency serving the Glades region and Palm Beach County in 2019. The Belle Glade Police Department (71) and Pahokee Police Department (23) made the most Index Arrests for aggravated assault in 2019. South Bay Police Department had the most Index Arrests for larceny (8) and aggravated assault (7). Additionally, Palm Beach County Sheriff's Office had the most Index Arrests for larceny (933) in 2019.

Table 35: Arrests by Charge, Index Arrests, Glades Region and Palm Beach County, 2019

Agency/County	Murder	Rape	Robbery	Aggravated Assault	Burglary	Larceny	Motor Vehicle Theft
Palm Beach County	63	90	483	1,640	758	4,250	523

Arrests by Charge, Part II Arrests

Part II arrests are those arrests that include manslaughter, kidnap/abduction, arson, simple assault, drug arrests, bribery, embezzlement, fraud, counterfeit/forgery, extortion/blackmail, intimidation, prostitution, non-forcible sex offenses, stolen property, DUI, destruction/vandalism, gambling, weapons violations, liquor law violations, and other miscellaneous offenses.²⁸

The table below shows the arrests by part II arrest charges in the Glades region and Palm Beach County in 2019. The most Part II arrests made by the Belle Glades Police Department were drug arrests (119). The Pahokee Police Department had the highest Part II arrest counts for drug arrests (29) and simple assault (29) in 2019. The South Bay Police Department had 13 Part II arrests related to Simple Assault, the highest arrest count category for that area.

Table 36: Arrests by Charge, Part II Arrests, Glades Region and Palm Beach County, 2019

Part II Arrest	Palm Beach County	Palm Beach County Sheriff's Office	Belle Glade Police Department	Pahokee Police Department	South Bay Police Department

DRAFT

Health Status Profile

Maternal and Child Health

Prenatal Care

Births to Mothers with 1st Trimester Prenatal Care

Early prenatal care provides benefits to both mothers and their babies.²⁹ Receiving care during the first trimester, defined as the first 12 weeks of pregnancy, is especially crucial.³⁰ Receiving early medical attention can ensure that any medical conditions or potential complications are detected and addressed before they arise or worsen.³¹ In rural areas, women face particular barriers to receiving prenatal care, including hospital closures, shortages of obstetricians and gynecologists, and lengthy distances to maternal health providers.³²

The following table shows the total number of births to mothers who received first trimester prenatal care in the Glades Region from 2016 to 2019. The number of births to mothers with first trimester prenatal care in Belle Glade decreased from 2016 (168) to 2017 (153), and then increased in 2019 (191). In Pahokee, the number of births remained fairly stable from 2016 (65) to 2018 (64), then notably increased from 64 births in 2018 to 73 births in 2019. In South Bay, the number of births remained steady from 2016 (26) to 2019 (24). Additionally, the number of births in Canal Point declined from 7 in 2017 to 2 in 2019.

The Healthy People 2030 national target is to increase the proportion of women who receive early and adequate prenatal care to 80.5%.³³ While the data below shows the total number of births, any increase in these numbers is progress towards a healthier community.

Births to Mothers with 3rd Trimester Prenatal Care

The third trimester of pregnancy begins during the 28th week of gestation and ends with delivery.³⁴ The risks of receiving late or no prenatal care are significant. Babies born to mothers who receive no prenatal care are three times more likely to have a low birth weight and five times more likely to die as compared to those born to mothers who do receive prenatal care.³⁵ Under 50% of all rural women have access to perinatal services within a 30-minute drive of their home, and over 10% of rural mothers are forced to drive at least 100 miles for such services.³⁶

The table below shows the births to mothers with third trimester prenatal care in the Glades Region from 2016 to 2019. Births to mothers receiving third trimester prenatal care in Belle Glade increased from 2016 (9) to 2018 (17), then decreased slightly in 2019 (14). Canal Point reported no births to mothers with third trimester prenatal care in all years. In Pahokee, the number of births to mothers with third trimester prenatal care was highest in 2018 (6) and lowest in 2019 (3). South Bay reported no births to mothers with third trimester prenatal care in 2016 and 2017, and reported 3 births to mothers with third trimester prenatal care in both 2018 and 2019.

Healthy People 2030 has not identified a national target for births to mothers with third trimester or no prenatal care.

Births to Mothers with No Prenatal Care

As previously mentioned, a failure to receive prenatal care is associated with a higher likelihood of negative health outcomes for both babies and their mothers, and a failure to receive prenatal care has significant consequences for rural women in particular. As recently as 2015, there were 29.4 maternal deaths per 100,000 population in the most rural areas versus 18.2 per 100,000 population in urban areas. Research suggests that difficulty accessing prenatal care in rural areas may be causing this disparity.³⁷

This table shows the total number of births to mothers with no prenatal care in the Glades Region from 2016 to 2019. Births to mothers with no prenatal care decreased from 2016 to 2019 for Belle Glade and Pahokee. Canal Point reported no births during this time frame. The total number of births to mothers with no prenatal care in South Bay was lowest in 2017 with 0 births, and highest in 2019 with 6 births.

Healthy People 2030 has not identified a national target for births to mothers with third trimester or no prenatal care.

Births by Kotelchuck Prenatal Care Index by Mother's Education

The Kotelchuck Index, also referred to as the Adequacy of Prenatal Care Utilization (APNCU) Index, uses elements obtained from birth certificate data, including when prenatal care began (initiation) and the number of prenatal visits from when prenatal care began until delivery (received services). These elements are used to determine the adequacy of prenatal care received.³⁸ A ratio of observed to expected visits is calculated and grouped into four categories: Inadequate (received less than 50% of expected visits), Intermediate (received 50%-79% of expected visits), Adequate (received 80%-109% of expected visits), Adequate Plus (received 110% or more of expected visits).³⁹ The Kotelchuck Index is recommended for use among low-risk pregnancies because high-risk pregnancies tend to require many more visits than would normally be expected. Mothers in rural areas are more likely to report inadequate prenatal care.⁴⁰

The following four tables show the total number of births by the Kotelchuck Prenatal Care Index by mother's education in each of the Glades Region ZIP codes in 2019. While the majority of mothers received Adequate Plus prenatal care in three of the four (33430, 33476, 33493) Glades Region ZIP codes, the number of mothers who received Inadequate prenatal care was similar to the number who received Adequate prenatal care in all ZIP codes. Additionally, mothers with lower educational attainment were more likely to receive Inadequate prenatal care, and mothers with at least a high school degree were more likely to receive Adequate or Adequate Plus prenatal care.

Healthy People 2030 has not identified a national target for the number of births by the Kotelchuck Prenatal Care Index by mother's education.

Table 40: Births by Kotelchuck Prenatal Care Index by Mother's Education, Glades Region Zip Code 33430, 2019

Overweight & Obesity

Births to Overweight Mothers at the Time Pregnancy Occurred

From 2016 to 2019, pre-pregnancy obesity increased among women of all ages in the United States.⁴¹ Pre-pregnancy BMI is associated with various adverse health outcomes for mothers and newborns, including gestational diabetes, hypertension, preeclampsia, cesarean delivery, preterm delivery, large size for gestational age, and infant death.⁴² Previous research suggests that rural mothers are more likely to have unhealthy pre-pregnancy body mass index (BMI) levels as compared to their urban counterparts.⁴³

This table shows the total number of births to overweight mothers at the time pregnancy occurred in the Glades Region from 2016 to 2019. The total number of births increased Belle Glade from 71 in 2016 to 88 in 2019. The number of births decreased from 35 in 2017 to 26 in 2019 in Pahokee and decreased from 19 in 2017 to 11 in 2018 but increased again slightly to 14 in 2019 in South Bay. The number in Canal Point fluctuated during this time period, but ultimately decreased from 3 in 2018 to 1 in 2019.

Healthy People 2030 has not set a national target for births to overweight mothers at the time of pregnancy.

Births to Obese Mothers at the Time Pregnancy Occurred

The table below shows the births to obese mothers at the time pregnancy occurred in the Glades Region from 2016 to 2019. In Belle Glade, the number of births to obese mothers decreased between 2016 (102) and 2017 (97), then increased from 2018 (114) to 2019 (126). In Pahokee, the lowest number of births to obese mothers was reported in 2017 (35) and the highest was reported in 2018 (58). The number of births to obese mothers in South Bay decreased from 2016 (25) to 2017 (20), increased in 2018 (23), and remained steady in 2019 (23).

Healthy People 2030 has not set a national target for the number of births to obese mothers at the time of pregnancy.

WIC

Births by Mothers Participating in WIC

The Supplemental Nutrition Program for Women, Infants, and Children (WIC) is a federal nutrition program that serves low-income pregnant and postpartum women, infants, and children nationwide.⁴⁴ Prenatal WIC participation by low-income women is associated with fewer premature deaths, lower incidence of very low and low birth weight, reduced infant mortality, and an increased likelihood of receiving prenatal care.⁴⁵ Despite this, WIC is particularly underutilized in rural areas.

The table below shows the total number of births to mothers participating in WIC in the Glades Region from 2016 to 2019. In Belle Glade, the number of births to mothers participating in WIC increased from 261 in 2016 to 284 in 2019. The number of births in Pahokee increased from 2016 (92) to 2018 (118) and decreased in 2019 (98). In South Bay, the number of births to mothers participating in WIC decreased from 2016 (46) to 2019 (34). Additionally, the number of births in Canal Point has remained fairly steady.

Healthy People 2030 has not set a national target for births to mothers participating in WIC.

Birth Rates

Total Resident Live Births

Live births rates are often used to determine sociological changes, including population changes, and to provide context to maternal health outcomes.⁴⁶ Nationally, rural areas have consistently reported higher fertility rates than non-rural areas.⁴⁷

This table shows the total number of resident live births in the Glades Region from 2016 to 2019. In Belle Glades, the total number of resident live births increased each year between 2016 (317) and 2019 (340). The number of live births in Pahokee increased from 2016 (114) to 2018 (139), followed by a sharp decline in 2019 (113), while the number in South Bay decreased each year between 2016 (56) and 2019 (45).

Healthy People 2030 has not set a national target for total resident live births.

Table 47: Total Resident Live Births, Glades Region Zip Codes, 2015-2019

Repeat Births to Mothers Ages 15-19

Births to teenage mothers can have negative health, social, and economic impacts on mothers and their children. Teen births and repeat teen births can prevent mothers from pursuing educational and workforce opportunities, and repeat teen births are more likely to be preterm or of low birthweight than first teen births.⁴⁸ Nationally, the birth rate for females ages 15 to 19 fell 4% between 2018 and 2019.⁴⁹ Despite overall decreases in teenage pregnancy rates nationally, rural areas consistently report higher levels of teen pregnancy than other areas.⁵⁰

The following table shows the total number of repeat births to teen mothers in the Glades Region from 2016 to 2019. Belle Glade reported the highest number of repeat births to teen mothers in 2017 (9) compared to all other years and ZIP codes. Most recently in 2019, Belle Glade reported 4 repeat births to teen mothers, Pahokee reported 2 repeat births, and Canal Point and South Bay both reported no repeat births.

Healthy People 2030 has not set a national target for repeat births for mothers ages 15 to 19.

Newborn Discharges, By ZIP Code

The table below shows the total number of newborns delivered by mothers in the Glades region in 2020. A total of 473 newborns were delivered, 308 in the 33430 ZIP code of Belle Glade, 119 in the 33476 ZIP code of Pahokee, 39 in the 33493 ZIP code of South Bay, and 7 in the 33438 ZIP code of Canal Point.

Table 49: Newborn Discharges, by ZIP Code, Glades Region, 2020

	2020	
	Count	Percent
33430 - Belle Glade	308	65.1%
33438 - Canal Point	7	1.5%
33476 - Pahokee	119	25.2%
33493 - South Bay	39	8.2%
Total	473	100.0%

Birth Weight

Live Births Under 1500 Grams (Very Low Birth Weight)

About one percent of babies in the United States are born with very low birth weight.⁵¹ Very low birth weight often coincides with premature birth and various health complications. While urban and rural areas report equal rates of low birth weights nationally, significant rural-urban disparities continue to exist within particular regions.⁵²

This table shows the total number of live births under 1500 grams, or very low birth weight, in the Glades Region from 2016 to 2019. In Belle Glade, the number of live births under 1500 grams more than doubled from 2016 (4) to 2017 (9), stayed constant from 2017 (9) to 2018 (9), and increased slightly in 2019 (10). Most recently in 2019, Pahokee reported 3 live births under 1500 grams, South Bay reported 2, and Canal point reported 0.

Healthy People 2030 has not set a national target for the number of live births under 1500 grams.

Table 50: Live Births Under 1500 Grams (Very Low Birth Weight), Glades Region Zip Codes, 2015-2019

Live Births Under 2500 Grams (Low Birth Weight)

The World Health Organization defines low birth weight (LBW) as the birth weight less than 2500 grams regardless of gestational age.⁵³ Babies with a low birth weight are 20 times more likely to develop complications and die compared to babies with a normal birth weight.⁵⁴

This table shows the total number of live births under 2500 grams, or low birth weight, in the Glades Region from 2016 to 2019. In Belle Glade, the total number of live births under 2500 grams decreased from 2016 (33) to 2018 (25), then increased most recently in 2019 (32). In Pahokee, the number of live births in this category decreased from 17 in 2016 to a low of 10 in 2019. South Bay reported 4 in 2017 (the area's lowest number of live births under 1500 grams during this time frame), followed by an increase to 7 in 2018, and 10 in 2019. Canal Point did not report any live births under 1500 grams during this time frame.

Healthy People 2030 has not set a national target for rates of low birth weight.

Table 51: Live Births Under 2500 Grams (Low Birth Weight), Glades Region Zip Codes, 2015-2019

Preterm Births

Preterm Births

A premature birth is a birth that takes place more than three weeks before the baby's estimated due date, or before the start of the 37th week of pregnancy.⁵⁵ Premature births are associated with numerous health problems for newborns. Nationally, the preterm birth rate was 10.1% in 2020.⁵⁶ Overall, in the United States, rural areas report slightly higher rates of preterm birth, with 10.4% of babies born preterm in rural areas and 10% in urban areas.⁵⁷ States with higher levels of premature birth are also more likely to report higher levels of low birth weight, likely reflecting the association between premature birth and low birth weight.

The table below shows the total number of preterm births in the Glades Region from 2016 to 2019. The number of preterm births stayed stable for Belle Glade from 2016 (35) to 2017 (35), followed by an increase in 2018 (40) and 2019 (47). The number of preterm births increased in Pahokee from 2016 (12) to 2018 (25), then decreased in 2019 (19). Preterm births in South Bay increased from 2016 (9) to 2017 (10), decreased in 2018 (7), and then remained steady in 2019 (7). Canal Point reported no preterm births from 2016 to 2019.

The Healthy People 2030 national target is to reduce the rate of preterm births to 9.4 per 100,000 population.⁵⁸ While this data looks at the total number of preterm births, any reduction in these numbers is progress towards a healthier community.

Table 52: Preterm Births (< 37 weeks), Glades Region Zip Codes, 2015-2019

DRAFT

Infant Mortality

Resident Fetal Death Rate per 1,000 Deliveries

Fetal death refers to the death of a fetus at any time during pregnancy.⁵⁹ Fetal deaths later in pregnancy, at 20 weeks of gestation or more, are sometimes referred to as stillbirths. As of 2017, the United States reported 5.9 fetal deaths at 20 or more weeks of gestation per 1,000 live births and fetal deaths.⁶⁰

The table below shows the resident fetal death rate per 1,000 deliveries in the Glades Region from 2015 to 2019. In Belle Glade, the fetal death rate fluctuated from 2015 to 2017, and decreased from 9.1 deaths per 1,000 deliveries in 2017 to 5.9 deaths per 1,000 in 2018, where it remained in 2019. Notably, Pahokee saw a dramatic increase from 7.2 deaths per 1,000 deliveries in 2018 to 26.5 deaths per 1,000 deliveries in 2019.

The Healthy People 2030 national target is to reduce the number of fetal deaths to 5.7 fetal deaths per 1,000 live births and fetal deaths.⁶¹ Canal Point and South Bay are meeting this target, while Belle Glade and Pahokee are not.

Table 53: Resident Fetal Death Rate per 1,000 Deliveries, Glades Region, 2015-2019

ZIP Code	2015	2016	2017	2018	2019
33430 – Belle Glade	9.6	6.3	9.1	5.9	5.9
33438 – Canal Point	166.7	0	0	0	0
33476 – Pahokee	0	8.8	0	7.2	26.5
33493 – South Bay	0	0	0	0	0

Notes: Use caution when interpreting rates based on small numbers of events. Rates are considered unstable if they are based on fewer than five events or if the denominator (population at risk) is fewer than twenty.

Resident Infant Death Rate per 1,000 Deliveries

Infant mortality is the death of an infant before his or her first birthday.⁶² In 2019, the infant mortality rate in the United States was 5.6 deaths per 1,000 live births. Overall, infant mortality rates tend to be highest in rural areas, and lowest in large, urban areas.⁶³

The following table shows the resident infant death rate per 1,000 deliveries in the Glades Region from 2015 to 2019. The infant death rate per 1,000 deliveries fluctuated in Belle Glade during this time frame, and notably increased from 8.8 deaths per 1,000 deliveries in 2018 to 14.7 per 1,000 deliveries in 2019. Pahokee also reported a very large increase in infant death rates from 2018 (7.2 per 1,000) to 2019 (17.7 per 1,000). Most recently in 2019, Canal Point and South Bay reported no infant deaths.

The Healthy People 2030 national target is to reduce the rate of infant deaths to 5.0 deaths per 1,000 live births. Canal Point and South Bay are meeting this target, while Belle Glade and Pahokee are not.

Table 54: Resident infant death rate per 1,000 deliveries, Glades Region, 2015-2019

ZIP Code	2015	2016	2017	2018	2019
33430 – Belle Glade	16.0	12.6	18.2	8.8	14.7
33438 – Canal Point	0	0	0	0	0
33476 – Pahokee	8.3	8.8	8.1	7.2	17.7
33493 – South Bay	0	0	19.6	0	0

Notes: Use caution when interpreting rates based on small numbers of events. Rates are considered unstable if they are based on fewer than five events or if the denominator (population at risk) is fewer than twenty.

Breastfeeding

The U.S. Dietary Guidelines for Americans and the American Academy of Pediatrics recommend mothers exclusively breastfeed for six months and then continue breastfeeding while introducing complementary foods until a child is 12 months old or older. This is important because breastfeeding protects infants against short- and long-term illnesses and diseases such as asthma, obesity, and type 1 diabetes.⁶⁴

Mothers Who Initiate Breast Feedings

The table below shows the count of mothers who initiated breastfeeding after birth in the Glades region from 2015 to 2019. This total number of mothers who initiated breastfeeding increased from 2015 (306) to 2018 (338), then decreased in 2019 (317).

The Healthy People 2030 national target is to increase the percent of infants that are breastfed exclusively up to six months of age to 42.4%.⁶⁵

Table 55: Mothers Who Initiate Breast Feedings, Glades Region, 2015- 2019

	2015	2016	2017	2018	2019

Behavioral Health

Mental Health

Mental Disorder Emergency Department Utilization

According to the Substance Abuse and Mental Health Services Administration, in the United States, overall mental health service utilization was highest among White adults (18.3%), followed by adults reporting two or more races (17.6%), American Indian or Alaska Native (14.4%), Black (8.9%), Hispanic (8.7%), Native Hawaiian or Pacific Islander (6.9%), and Asian (5.9%) adults.⁶⁶ Regarding outpatient mental health services, the highest utilization rates were reported among adults reporting two or more races (10.2%), followed by White (9.0%), American Indian or Alaska Native (7.6%), Black (5.0%), and Asian (3.8%) adults. Additionally, females were more likely than males to utilize mental health outpatient services. White males utilized mental health service more than males of all other races, and White females also reported higher utilization than females of all other races. For every age group, White adults were more likely to use mental health services than adults of all other races. Socioeconomic and environmental factors, including access to insurance and available transportation, contribute to these disparities.

Additionally, among the one-fifth of all Americans who live in a rural area, 20% have a mental illness.⁶⁷ While rates of mental illness and disorders are similar between rural and urban areas, those in rural areas are less likely to receive mental health treatment.

The table below shows the number of mental disorder emergency department diagnoses by race in the Glades Region in 2019. Across all Glades ZIP codes, except 33438 (Canal Point), Black or African American patients were more likely than those of other races to be diagnosed with a mental disorder in an emergency department setting. In 33438 (Canal Point), Black or African American patients were the most likely to receive a mental disorder principal diagnosis (100%), but White patients were most likely to receive any level of mental health diagnoses (86.8%).

Healthy People 2030 has not set a national target for mental disorder emergency department utilization by race.

Table 56: Mental Disorder Emergency Department Utilization, By Race, Glades Region Zip Codes, 2020

Mental Disorder Emergency Department Utilization, By Ethnicity

The table below shows the number of mental disorder emergency department diagnoses by ethnicity in the Glades region in 2019. Across all ZIP codes in the Glades region, Non-Hispanic patients were much more likely to receive a mental disorder diagnosis than any other ethnicity reported. Belle Glade had the greatest total number of mental disorder diagnoses (1,639), with the second greatest number reported in Pahokee (649).

Table 57: Mental Disorder Emergency Department Utilization, By Ethnicity, Glades Region Zip Codes, 2020

ZIP Code	Ethnicity	Principal Diagnosis	Other Diagnosis 1-3	Total
33430- Belle Glade	Hispanic	45	220	265

Mental Disorder Emergency Department Utilization, By Sex

The table below shows the total number of mental disorder emergency department diagnoses by sex in the Glades region in 2019. Across all ZIP codes in the Glades region, Male patients were more likely than female patients to receive a mental disorder diagnosis overall. However, female patients were more likely to receive a principal mental disorder diagnosis in '33430 - Belle Glade' (54.2%) and '33476 - Pahokee' (54.5%), whereas male patients were more likely to receive a mental disorder diagnosis 1 through 3 in those same areas.

Table 58: Mental Disorder Emergency Department Utilization, By Sex, Glades Region Zip Codes, 2020

ZIP Code	Sex	Principal Diagnosis	Other Diagnosis 1-3	Total

Mental Disorder Emergency Department Utilization, By Age

The following table shows the total number of mental disorder emergency department diagnoses by age in the Glades region in 2019. Patients between the ages of 31 and 40 (27.6%) were the most likely to be diagnosed with a mental disorder, with those ages 21 to 30 (24.5%) being the second most likely to be diagnosed.

Table 59: Mental Disorder Emergency Department Utilization, By Age, Glades Region Zip Codes, 2020

Age	Principal Diagnosis	Other Diagnosis 1-3	Total
0-10 Years	1	9	10
11-20 Years	42	156	198

Mental Disorder Inpatient Utilization, By Race

Inpatient hospitals, where patients stay overnight, can provide care for individuals afflicted by mental disorders. Nationally, between 2015 and 2019, inpatient mental health service use was highest among Black adults (1.5%) as compared to adults of other races, and highest among Hispanic adults (1.0%) as compared to adults of other ethnicities.⁶⁸ Females were more likely than males to utilize mental health inpatient services, as well. As mentioned previously, individuals living in rural areas are less likely to receive care for mental illness compared non-rural individuals.

The following table shows the total number of mental disorder inpatient diagnoses by race in the Glades region in 2019. In 33430 – Belle Glade (69.5%), 33476 – Pahokee (80.2%), and 33493 - South Bay (77.9%), Black or African American patients received the most mental disorder diagnoses of all races reported, while in 33438 – Canal Point, White patients (76.9%) received the most mental disorder diagnoses.

There is no Healthy People 2030 national target currently set for mental disorder inpatient utilization by race.

Table 60: Mental Disorder Inpatient Utilization, By Race, Glades Region Zip Codes, 2020

DRAFT

Mental Disorder Inpatient Utilization, By Ethnicity

This table below shows the total number of mental disorder inpatient diagnoses by ethnicity in the Glades region in 2019. Overall, Non-Hispanics comprise the majority of all Principal Diagnoses, Other Diagnoses 1-3 and Total Diagnoses. This trend was reflected across all zip codes – 33430, 33438, 33476, and 33493. There is no Healthy People 2030 national target currently set for mental disorder inpatient utilization by ethnicity.

Table 61: Mental Disorder Inpatient Utilization, By Ethnicity, Glades Region Zip Codes, 2020

ZIP Code	Ethnicity	Principal Diagnosis	Other Diagnosis 1-3	Total
33430- Belle Glade	Hispanic	10	30	40
	Non-Hispanic	69	162	231
	Unknown	1	0	1
	Total	80	192	272

Mental Disorder Inpatient Utilization, By Sex

The table below shows the total number of mental disorder inpatient diagnoses by sex in the Glades region in 2019. Overall, Males comprise the majority of all Principal Diagnoses, Other Diagnoses 1-3 and Total Diagnoses. This trend was reflected across all zip codes – 33430, 33438, 33476, and 33493 – with notable exceptions among Females in Canal Point among Other Diagnoses 1-3, as well Females in South Bay among Principal Diagnoses.

There is no Healthy People 2030 national target currently set for mental disorder inpatient utilization by sex.

Table 62: Mental Disorder Inpatient Utilization, By Sex, Glades Region Zip Codes, 2020

ZIP Code	Sex	Principal Diagnosis	Other Diagnosis 1-3	Total
33430- Belle Glade	Female	31	88	119
	Male	49	104	153

Mental Disorder Inpatient Utilization, By Age

The table below shows the total number of mental disorder inpatient diagnoses by age in the Glades region in 2019. Overall, the highest totals for inpatient utilization were reported among the ages of 11-20 years, followed by 21-30 years, and 31-40 years. The highest number of Principal Diagnoses was reported among those aged 11-20 years, and the highest number of Other Diagnoses 1-3 was reported among those aged 21-30 years. There is no Healthy People 2030 national target currently set for mental disorder inpatient utilization by age.

Table 63: Mental Disorder Inpatient Utilization, By Age, Glades Region Zip Codes, 2020

Age	Principal Diagnosis	Other Diagnosis 1-3	Total

DRAFT

Morbidity

Asthma

Asthma is a chronic lung disease that inflames and narrows the airways causing recurring attacks of symptoms, such as wheezing and coughing. Inflammation makes the airways sensitive to various allergens and irritants in the environment, including mold, dust mites, animal dander, pollen, diesel emissions and tobacco smoke. This disease affects people of all ages but is one of the most common long-term diseases among children.⁶⁹

In rural regions, asthmatic adults and children can be triggered by agricultural practices and chemicals, and the lack of respiratory specialists in rural counties often makes asthma management difficult. However, in more urban areas, higher average daily traffic increases exposure to car emissions that can trigger asthma in adults and children, and limited access to public transportation often makes getting to medical appointments difficult.

Emergency Department Visits from or with Asthma

The table below shows the percentage of emergency department visits from or with an asthma diagnosis by residents of select ZIP codes in the Glades region of Palm Beach County in 2020. The Glades region overall contributed to 6% of principal diagnosis and 7.3% of other diagnoses within Palm Beach County. Among residents of the Glades region, residents from the 33430 ZIP code of Belle Glade represented the highest percent of principal (3.8%) and other diagnoses (4.7%) due to asthma compared to the other ZIP codes. This was followed by residents of the ZIP code 33476, Pahokee, with 1.4% of principal diagnoses and 1.7% of other diagnoses.

Table 64: Emergency Department Visits from or with Asthma, Glades Region, 2020

ZIP Code	Asthma			
	Principal Diagnosis		Other Diagnoses 1-3	
	Count	Percent	Count	Percent
Palm Beach County	3,135	100%	9,003	100%
33430 - Belle Glade	120	3.8%	422	4.7%
33438 - Canal Point	1	0.0%	7	0.1%
33476 - Pahokee	45	1.4%	153	1.7%

Chronic Obstructive Pulmonary Disease

Chronic obstructive pulmonary disease (COPD) is a group of diseases, which includes emphysema, chronic bronchitis, and non-reversible asthma. COPD can make it difficult to breathe and can ultimately result in death. According to the Centers for Disease Control and Prevention, chronic lower respiratory disease, specifically COPD, was the fourth leading cause of death in the United States in 2018. Based on 2013 data, the following groups were more likely to report COPD: women, adults ages 65 and older, American Indians/Alaska Natives, multiracial non-Hispanics, current or former smokers, and people with a history of asthma.⁷⁰ Similar to asthma, exposure to air pollution due to agricultural practices and chemicals in rural communities is also a risk factor for COPD.

Emergency Department Visits from or with Chronic Obstructive Pulmonary Disease

The table below shows the percentage of emergency department visits from or with COPD among residents of select ZIP codes in the Glades region of Palm Beach County in 2020. The Glades Region contributed to 5.5% of principal diagnosis and 7.1% of other diagnoses. Among residents of the Glades region, residents from the 33430 ZIP code of Belle Glade represented the highest percent of principal (3.3%) and other diagnoses (3.9%) due to COPD compared to all other ZIP codes. This was followed by residents of the ZIP code 33476 of Pahokee with 1.5% of principal diagnoses and 2.3% of other diagnoses.

Hypertension

Hypertension is defined by the American College of Cardiology and the American Heart Association as blood pressure that is at or above 130 over 60 millimeters of mercury (mm Hg). Having hypertension puts individuals at risk for heart disease and stroke, the leading cause and fifth leading cause of death in the United States.⁷¹

Certain factors can put an individual at increased risk of hypertension including certain health conditions, lifestyle behaviors, and a family history of hypertension. The risk of hypertension also increases with age, because blood pressure tends to rise as an individual gets older. In addition to age, other risk factors include sex, race, and ethnicity. Compared to men, women are more likely to develop hypertension. Black Americans develop hypertension earlier in life compared to White Americans, and Black Americans develop hypertension more often than Hispanics and other racial and ethnic groups.⁷²

Emergency Department Visits from or with Hypertension

The table below shows the percent of emergency department visits from or with hypertension among residents of select ZIP codes in the Glades region of Palm Beach County in 2020. The Glades region contributed to 3.5% of principal diagnosis and 6.4% of other diagnoses related to hypertension in Palm Beach County. Among residents of the Glades region, residents from the 33430 ZIP code of Belle Glade had the highest percentage of principal (2.1%) and other diagnoses (4.1%) due to hypertension.

Table 70: Emergency Department Visits from or with Hypertension, Glades Region, 2020

Dental Conditions

Oral health refers to the health of the teeth, gums, and the entire oral-facial system that allows us to smile, speak, and chew. Some of the most common diseases that impact our oral health include cavities (tooth decay), gum (periodontal) disease, and oral cancer. Tooth decay is the most common chronic disease in children and adults in the United States.⁷³ To prevent these dental conditions, routine preventative dental care is essential. Many people, however, are unable to afford dental care compared to other types of health care. Dental care is also not covered by Medicare, and Medicaid programs are not required to provide dental benefits to adult enrollees.⁷⁴ Factors that are known to contribute to oral health challenges in rural communities include a lack of access to dental care, lower oral health literacy, a lack of fluoridated water supplies, and a higher prevalence of tobacco use.⁷⁵

Emergency Department Visits From Or With Dental Conditions

The table below shows the percentage of emergency department visits from or with a diagnosis of dental conditions among residents of select ZIP codes in the Glades region of Palm Beach County in 2020. The Glades region contributed to 8.2% of principal dental condition diagnoses and 7.7% of other diagnoses due to dental conditions in Palm Beach County. Among residents of the Glades region, residents from the ZIP code 33430 of Belle Glade contributed to the majority of principal (4.8%) and other diagnosis (4.5%).

Substance Use

More than 20 million adults and adolescents in the United States had a substance use disorder in the past year. Substance use disorders can involve illicit drugs, prescription drugs, or alcohol. These disorders are also linked to many health problems, and overdoses can lead to emergency department visits and death.⁷⁶ According to the Rural Health Information Hub, adults in rural areas report higher rates of tobacco use and methamphetamine use, while prescription drug misuse and heroin use has increased across all communities. Factors that contribute to substance use in rural communities include low educational attainment, poverty, unemployment, lack of access to mental healthcare, and isolation.⁷⁷

Emergency Department Visits from or with Substance Use

The table below shows the percentage of emergency department visits from or with substance use among residents of select ZIP codes in the Glades region of Palm Beach County in 2020. The Glades region contributed to 1.7% of principal diagnosis and 7.2% of other diagnoses due to substance use. Among residents of the Glades region, residents from the 33430 ZIP code of Belle Glade had the highest percentage of principal diagnosis (1.2%) and other diagnosis (4.3%) due to substance use compared to all other ZIP codes.

Mortality

Leading Causes of Death

Chronic diseases are a concern to rural healthcare systems and rural residents due to their impact on quality of life, mortality, and healthcare costs. Compared to urban communities, rural communities have fewer resources to prevent chronic diseases, which are difficult and expensive to treat.⁷⁸

Leading Causes of Deaths

The table below shows the death counts due to the leading causes of death for select ZIP codes in the Glades region of Palm Beach County in 2020. In the Glades Region overall, the leading cause of death was cardiovascular disease (70) followed by Cancer (48). Cardiovascular disease was also the leading cause of death in Belle Glade (44), Pahokee (16), and Canal Point (3).

Table 79: *Leading Causes of Deaths, Glades Region, 2020*

Cause of Death	Belle Glade (33430)	Canal Point (33438)	Pahokee (33476)	South Bay (33493)	Total
Anemias (D50-D64)	1	0	0	0	1

DRAFT

Diabetes

Diabetes is a disease that occurs when a person's blood glucose, also called blood sugar, is too high. The most common type of diabetes is type 2 diabetes. Individuals with diabetes are twice as likely to have heart disease or suffer a stroke compared to those without diabetes.⁷⁹ Those with diabetes are also more likely to have adverse outcomes at a younger age. Risk factors that put an individual at a higher risk for developing type 2 diabetes include being physically active less than 3 times per week, being overweight, being 45 years or older, or having a close relative with diabetes.⁸⁰ Black Americans, Hispanics, American Indians or Alaska Natives are also at a higher risk for developing diabetes compared to those of other races.⁸¹

Deaths by Diabetes Mellitus

The table below shows the death counts due to diabetes mellitus in the Glades Region of Palm Beach County from 2015 to 2019. Compared to other ZIP codes, the 33430 ZIP code of Belle Glade had the most deaths each year. Overall, the death count in the Glades region increased from 7 in 2016 to 16 in 2019.

Table 80: Deaths by Diabetes Mellitus, Glades Region, 2015-2019

	2015	2016	2017	2018	2019
33430 - Belle Glade	9	1	4	9	11

Chronic Lower Respiratory Disease

Chronic respiratory diseases, such as asthma and Chronic Obstructive Pulmonary Disease (COPD), make it difficult to breathe due to problems in the airway and other lung structures. Although death rates for chronic lower respiratory disease (CLRD) are higher in rural areas, rural communities are less likely to have pulmonary rehabilitation facilities and pulmonologists to properly treat the disease.⁸²

Deaths by Chronic Lower Respiratory Disease

The table below shows the death counts due to CLRD within the Glades region from 2015 to 2019. Overall, the total death count in the Glades region due to CLRD increased from 2015 (8) to 2017 (14), then decreased to 2019 (6).

Table 81: Deaths by Chronic Lower Respiratory Disease (CLRD), Glades Region, 2015-2019

Heart Disease Deaths

Cardiovascular Disease Deaths

The following table shows the number of cardiovascular disease deaths in the Glades region and Palm Beach County from 2016 to 2020. From 2019 to 2020, the total deaths decreased among residents in all areas of the Glades region but increased in Palm Beach County overall. In 2020, the most cardiovascular disease deaths in the Glades region occurred in Belle Glade (44) followed by Pahokee (16).

There is no Healthy People 2030 national target directly associated with this health indicator.

Table 82: Cardiovascular Disease Deaths, Glades Region and Palm Beach County, 2016 – 2020

	2016	2017	2018	2019	2020

Cancer Deaths

The following table shows the number of cancer deaths in the Glades region and Palm Beach County from 2016 to 2020. The number of cancer deaths among Belle Glade residents decreased from 39 in 2019 to 27 in 2020. Belle Glade also had the highest number of cancer deaths of all areas in the Glades region each year from 2016 to 2020 followed by Pahokee.

The Healthy People 2030 national target is to reduce the overall cancer death rate to 122.7 per 100,000 population.⁸³ While the data below shows the total number of cancer deaths, any decrease in these numbers is progress towards a healthier community.

Table 83: Cancer Deaths, Glades Region and Palm Beach County, 2016 - 2020

	2016	2017	2018	2019	2020
Palm Beach County	3,368	3,182	3,237	3,211	3,232

Unintentional Injury Deaths

The table below shows the number of unintentional injury deaths in the Glades region and Palm Beach County from 2016 to 2020. Unintentional injuries include, but are not limited to, motor vehicle crashes, other land transport accidents, water/air/space transport accidents, falls, firearms discharge, drowning, smoke, fire and flame exposure, poisoning, and noxious substance exposure.⁸⁴ From 2019 to 2020, the number of unintentional injury deaths increased from 9 to 15 among Belle Glade residents, decreased from 7 to 4 among Pahokee residents, decreased from 4 to 1 among South Bay residents, and increased from 0 to 1 among Canal Point residents.

The Healthy People 2030 national target is to reduce unintentional injury deaths to 43.2 per 100,000 population.⁸⁵ While the data below shows the total number of unintentional injury deaths, any decrease in these numbers is progress towards a healthier community.

Table 84: Unintentional Injury Deaths, Glades Region and Palm Beach County, 2016 - 2020

	2016	2017	2018	2019	2020
Palm Beach County	998	1,098	913	1,013	1,157

Homicide Deaths

The table below shows the number of homicide deaths in the Glades region and Palm Beach County from 2016 to 2020. The number of homicide deaths among Belle Glade residents increased from 2019 (4) to 2020 (8). In Pahokee, the number of deaths decreased from 2018 (4) to 2019 (1) and remained constant in 2020 (1).

The Healthy People 2030 national target is to reduce homicides to 5.5 per 100,000.⁸⁶ While the data below shows the total number of homicide deaths, any decrease in these numbers is progress towards a healthier community.

Table 85: Homicide Deaths, Glades Region and Palm Beach County, 2016 - 2020

Cerebrovascular Deaths

The following table shows the number of cerebrovascular deaths in the Glades region and Palm Beach County from 2016 to 2020. Every year during this timeframe, Belle Glade had the highest number of deaths among residents. From 2019 to 2020, the number of deaths decreased among Belle Glade residents from 13 to 8 and among Pahokee residents from 4 to 2. There were 0 deaths among Canal Point residents and 3 deaths among South Bay residents most recently in 2020.

There is no Healthy People 2030 national target directly associated with this health indicator.

Table 86: Cerebrovascular Deaths, Glades Region and Palm Beach County, 2016 - 2020

Health Resource Availability and Access

The ability to access to timely, quality health care services is considered a social determinant of health and indicator of wellbeing in communities. Unfortunately, many people do not get the services they need due to availability or lack thereof of health care resources in a certain area.

According to the United States Census, approximately 1 in 10 individuals did not have health insurance coverage in 2020.⁸⁷ People without health insurance are less likely to have a primary care provider, resulting in delayed care, less preventative health screenings, and, ultimately, worse health outcomes. Specialty healthcare services may be inaccessible due to lack of transportation and necessary medication critical for treatment be unaffordable, further exacerbating issues.⁸⁸ These situations can lead people to utilize the emergency department as a primary source of care, driving up healthcare costs and unnecessarily filling beds.

This section explores the availability of health resources and associated factors in the Glades region, ZIP codes 33430, 33438, 33476, 33493, to assess residents' ability to access healthcare and identify any gaps or barriers that exist. Inequities in healthcare access can lead to disparities in health outcomes, so it is important to understand these factors related to Glades region residents specifically. Data on Palm Beach County overall has been included for context. Included in this section is data on the following indicators: hospital utilization, health care provider supply, Federal Health Professional Shortage Areas (HPSAs), Federal Medically Underserved Areas/Populations (MUA/Ps), and health insurance.

Hospital Utilization

Emergency Department Utilization

Between 2005 and 2016, rural emergency department visits increased by over 50%, while urban emergency department visits stayed relatively stable.⁸⁹ This growth was largely fueled by increased visits by those ages 18 to 64, non-Hispanic white patients, Medicaid beneficiaries, and patients without insurance.

⁸⁷ Health Insurance Coverage in the United States: 2020 (2021, September). In *United States Census Bureau*. Retrieved from <https://www.census.gov/content/dam/Census/library/publications/2021/demo/p60-274.pdf>

⁸⁸ Health Care Access and Quality (n.d.). In *Healthy People 2030*. Retrieved from <https://health.gov/healthypeople/objectives-and-data/browse-objectives/health-care-access-and-quality>

Additionally, more hospitals in rural settings are acting as safety-net hospitals, or hospitals that serve patients regardless of their ability to pay, a trend that is increasing pressure on rural emergency departments.

Hospital Emergency Department Utilization, January-December 2020

The table below shows the total number of visits in hospital emergency departments in the Glades region and for all Palm Beach County Hospitals from January to December 2020. Lakeside Medical Center is the only emergency department in the Glades region, accounting for 16,721 (2.1%) of emergency department visits during this time frame.

Healthy People 2030 has not identified a national target for emergency department utilization for all causes.

Table 87: Hospital Emergency Department Utilization, January-December 2020

Facility Name	Visits	% of Total
Lakeside Medical Center	16,721	3.4
Total for Palm Beach County Hospitals	488,851	--

Emergency Department Utilization Top Ten Principal Diagnosis

There were 130 million emergency department visits in the United States in 2018, with 12.4% of those visits (16.2 million) requiring hospital admission.⁹⁰ Of those visits, 16.2 million required hospital admission, and 2.3 million required critical care.

The table below shows the hospital emergency department top ten principal diagnosis groupings for Lakeside Medical Center in 2019. “Acute upper respiratory infection, unspecified” (3.7%) was the most common diagnosis grouping in 2019, with “Chest pain, unspecified” (2.8%) and “Hypertensive chronic kidney disease with stage 5 chronic kidney disease or end stage renal disease” (2.8%) as the second and third most common grouping.

Healthy People 2030 has not identified a national target for emergency department top ten principal diagnoses.

Table 88: Hospital Emergency Department Top Ten Principal Diagnosis Groupings, Lakeside Medical Center, Glades Zip Codes, 2020

Principal Diagnosis Groupings	Visits	Percent of Total
Acute Upper Respiratory Infection, unspecified	671	3.7
Chest pain, unspecified	511	2.8
Hypertensive chronic kidney disease with stage 5 chronic kidney disease or end stage renal disease	507	2.8
Urinary tract infection, unspecified	381	2.1
Influenza due to identified novel influenza A virus with other respiratory manifestations	310	1.7
COVID-19	303	1.7
Low Back Pain	247	1.4
Viral infection, unspecified	233	1.2
Acute pharyngitis, unspecified	225	1.2
Headache	216	1.2
All Other Diagnoses	14,660	80.3%
Total – All Principal Diagnoses	18, 264	100%

Federal Health Professional Shortage Areas (HPSAs)

Health Professional Shortage Areas, or HPSAs, are geographic areas, populations or facilities that have a shortage of primary, dental, or mental health care providers. HPSAs are designated by the Health Resources Services Administration (HRSA) and are therefore eligible to receive certain federal resources with the goal of improving access to health care services in under-resourced communities.⁹¹

Each HPSA receives a score based on certain common criteria, including the population-to-provider ratio, percent of population below 100% of the Federal Poverty Level (FPL), and travel time to the nearest source of care outside of the HPSA designation area. Additional criteria are used for HPSA scoring for each of the primary care, dental, and mental health areas. Scores can range from 0 to 25 for Primary Care and Mental Health, and from 0 to 26 for Dental Health. The greater the score, the greater the need.⁹²

Looking at the tables, the HPSA FTE Short refers to the number of full-time equivalent (FTE) practitioners needed to achieve the population to practitioner target ratio in that HPSA.⁹³

Primary Care Health Professional Shortage Areas

As previously mentioned, Primary Care areas can receive a score between 0 and 25. This figure shows the Primary Care HPSA scoring process.

Figure 11: Primary Care HPSA Scoring

DRAFT

Federal Medically Underserved Areas/Populations (MUA/Ps)

Federal Medically Underserved Areas/Populations (MUA/P) designate areas and populations with a lack of access to primary care services and are used to help establish health maintenance organizations or community health centers. MUAs have a shortage of primary care services within a geographic area, including a county, group of counties, or urban census tracts. MUPs have a shortage for a specific population subset facing barriers to health care access within a geographic area, including people who are experiencing homelessness or migrant farm workers.⁹⁴ HPSAs are designated by the Health Resources Services Administration (HRSA) and are therefore eligible to receive certain federal resources with the goal of improving access to health care services in under-resourced communities.⁹⁵

Each MUA/P receives an Index of Medical Underservice (IMU) score calculated for the designated area or population. An area or population with an IMU score of 62.0 or below can be classified as a MUA/P, and scores can be between 0 and 100. The following figure shows the score process for MUA/Ps.

Figure 14: MUA/P Scoring

Source: Health Resources and Services Administration, Scoring Shortage Designations, 2021

This table below shows the Medically Underserved Areas and Populations (MUA/Ps) in Palm Beach County as of October 2021. The Low Inc/ M F W – Belle Glade/Pahokee area had an IMUS score of 53.6, the third lowest score in Palm Beach County. Additionally, this was the only area designated as rural.

Table 94: Medically Underserved Populations and Areas, Palm Beach County, As of October 2021

Service Area Name	MUA/P ID	Index of Medical Underservice Score	Rural Status	Designation Date
Low Inc - Boca Raton	07246	57.8	Non-Rural	07/26/2002
Low Inc - Boynton Beach	00570	56.2	Non-Rural	09/04/2002

DRAFT

Health Insurance

Previous research suggests that having health insurance is a key determinant of being able to access routine, preventative, and comprehensive healthcare- which ultimately impacts health outcomes and risk of mortality.⁹⁶ A number of the leading causes of disability and disease can be prevented through early detection, which makes increasing health insurance coverage very important. While health insurance is only one factor mediating access to healthcare, it is foundational for improving quality of life and achieving health equity.

Insurance Coverage for Individuals with Disabilities

The table below shows the health insurance coverage status for individuals with disabilities in the Glades region and Palm Beach County in 2019. Pahokee (5.4%) and Belle Glade (3.6%) had the largest proportions of individuals under 19 years of age with a disability. All individuals in this age group with a disability in Pahokee were covered by health insurance, while only 88.0% were covered in Belle Glade. Canal Point (16.2%) and Pahokee (16.0%) had the largest proportion of individuals ages 19 to 64 with a disability. All disabled individuals in this age group in Canal Point were covered by health insurance. However, only 80.5% of disabled individuals in Pahokee were covered by health insurance, which was the lowest proportion across all areas. Pahokee had the largest proportion of individuals ages 65 and over with a disability (46.8%), and the lowest proportion of disabled individuals in this age group covered by health insurance (85.4%).

Uninsured

This table below shows the percent of individuals uninsured by age and sex in the Glades region in 2019. South Bay had the highest proportion of uninsured individuals under 19 years of age with 17.8% uninsured. Belle Glade had the highest proportion of uninsured individuals ages 19 to 25 (38.6%) and 19 to 64 (35.7%) years of age. Pahokee had the highest proportion of uninsured individuals ages 65 and older with 9.1% uninsured.

The proportion of uninsured males in Belle Glade (23.8%), Pahokee (20.2%), and South Bay (25.9%) was higher than that of females. Belle Glade had the highest proportion of uninsured females across all areas, with 22.3% of females uninsured.

Uninsured by Race and Ethnicity

The table below shows the percent of uninsured individuals by race and ethnicity in the Glades Region in 2019. South Bay had the largest proportion of uninsured 'White alone' (29.4%) and 'Black or African American alone' (24.6%) individuals. In Belle Glade, 90.9% of 'Asian alone' individuals were uninsured. In Canal Point, 100.0% of 'Some other race alone' individuals were uninsured.

When comparing 'Hispanic or Latino (of any race)' and 'White alone, not Hispanic or Latino' demographic categories, Pahokee had the largest proportion of 'Hispanic or Latino (of any race)' (30.4%) uninsured individuals and Belle Glade had the largest proportion of 'White alone, not Hispanic or Latino' (23.5%) uninsured individuals.

1. Description: Operations Reports – November 2021

2. Summary:

This agenda item provides the following operations reports for November 2021:

- Clinic Productivity, including in-person and telehealth metrics, No Show trended over time, demographics metrics and walk-in percentage.

3. Substantive Analysis:

In November, we had 9,861 visits which are 862 less than the month prior and 283 more than November of 2020. Our average patient visits per weekday were 543 among all clinics and an improved average of 45 patients on Saturdays among 6 clinics. The Lantana Clinic had the highest volume with 1,627 visits, followed by the Lewis Center Clinic with 1,262.

Our payer mix for November reflects 58% uninsured patients and 26% Managed Care.

By visit category, Women's Health, Pediatrics and Substance Abuse met their productivity target.

Productivity targets were met in the Delray and Lantana Primary Care, Lewis Center Primary Care and Substance Abuse, Lantana Pediatrics, Women's Health in Lake Worth and Belle Glade and Behavioral Health in Lewis Center, West Palm Beach and Lake Worth Clinics. In the 90% and higher range were West Palm Beach, Jupiter and Lake Worth Adult Primary Care, Delray and West Palm Beach Dental and Lantana Behavioral Health.

The largest age group of patients were ages 1-9 at 15% and ages 30-39 also at 15%. 48% of patients reported as White followed by 40% Black or African American. 40% of patients reported as Hispanic or Latino. 50% of patients' primary language was English, followed by Spanish at 32%. Creole-speaking totaled 16%. 60% of patients identified as female and 90% as straight. 5% of patients reported as Agricultural workers, of which 75% were seasonal and 25% migrant. 11% of patients reported as homeless, of which 83% were Doubling Up.

The No Show rate in November remains consistently at 27%. The year-to-date Tele no-show rate is 11.4% of the total no-show.

In November, the number of patients who walked in and were seen the same day totaled 1,945, 18% in medical and 23% in dental. In medical, the highest percent of walk-ins by clinic was the West Palm Beach clinic at 28%, followed by Lantana clinic with 24% of all patients seen. In dental, the highest percent of walk-ins by clinic was the Delray Clinic with 31%, followed by the West Palm Beach clinic with 29%.

1. Description: Quality Report

2. Summary:

This agenda item presents the updated Quality Improvement & Quality Updates:

- Quality Council Meeting Minutes January 2022
- UDS Report – December 2021
- Provider Productivity – November 2021

3. Substantive Analysis:

PATIENT SAFETY & ADVERSE EVENTS

Patient safety and risk, including adverse events, peer review and chart review are brought to the board “under separate cover” on a quarterly basis.

PATIENT SATISFACTION AND GRIEVANCES

Patient Relations to be presented as a separate agenda item.

QUALITY ASSURANCE & IMPROVEMENT

- QI Plan Updated
- Colorectal Cancer Screening – the data shows that Belle Glade clinic is outperforming all other clinic locations, and we plan to use it as a blueprint for education at other clinic locations.
- Cervical Cancer Screening - team looking to develop more sophisticated reporting for targeted follow-up and quality improvement.
- Diabetes control – we are meeting the metric for HbA1C

UTILIZATION OF HEALTH CENTER SERVICES

Individual monthly provider productivity stratified by clinic.

		To be re-evaluated in January once we have a whole month of Operation. We will track nurse visits at this location for productivity.	Clinic Admin Team	
PATIENT RELATIONS				
SURVEY RESULTS	<p><u>Patient Satisfaction Survey</u></p> <p>There were 258 surveys received in November 2021, a 15% decrease from the previous month. The Boca Raton Clinic received the most surveys. This brings the year-to-date total to 2,824 Patient Satisfaction Surveys received. Of the 258 Surveys received in October:</p> <ul style="list-style-type: none"> • Belle Glade – 13 (5%) • Boca Raton – 81 (31%) • Delray Beach – 15 (6%) • Jupiter – 1 (<1%) • Lake Worth – 89 (34%) • Lantana – 37 (14%) • Lewis Center – 10 (4%) • Mangonia Park – 7 (3%) • West Palm Beach – 5 (2%) <p>General Summary – November 2021</p> <ul style="list-style-type: none"> • November Surveys received by Language: <ul style="list-style-type: none"> ○ English = 62% ○ Spanish = 34% ○ Creole = 4% • Patients aged 21-60 completed 78% of November surveys. Patients over 80 and between ages 0 and 20 completed the least amount of surveys (<1%). 			

	<ul style="list-style-type: none"> • Surveys were received from all service lines, with Adult medical having the most at 74%, followed by Women's Health Services at 17%. • Most patients prefer to be seen in person on Monday, Tuesday, and Wednesday mornings. • Time at Practice <ul style="list-style-type: none"> ○ 28% were completed by Patients who have received care between 1 and 3 years. ○ 26% were completed by Patients who have received care less than 6 months. ○ 15% were completed after a patient first visit to the practice. <p>Patient Satisfaction Of the 258 surveys, 5 (2%) surveys were marked as Fair or Poor.</p> <ul style="list-style-type: none"> • Providing details about new medications prescribed <ul style="list-style-type: none"> ○ 1 (<1%) Lake Worth • Being aware of care you received from other doctors/providers, not in this practice <ul style="list-style-type: none"> ○ 1 (<1%) Lake Worth • Involving you in making decisions about your health <ul style="list-style-type: none"> ○ 1 (<1%) Lake Worth • Balancing personal interaction with you while using a laptop or computer <ul style="list-style-type: none"> ○ 1 (<1%) Lake Worth • Explaining things in a way that is easy to understand <ul style="list-style-type: none"> ○ 1 (<1%) Lake Worth 			
--	--	--	--	--

	<p>Of the 258 Surveys received:</p> <ul style="list-style-type: none"> • There were 2 surveys (<1%) that rated their Provider as Fair or Poor (btw 0-4 on a scale of 10) • There were 3 surveys (<1%) that indicated a patient would not recommend their provider (btw 0-4 on a scale of 10) • There was 1 survey (<1%) that indicated a patient would not recommend the practice to others (btw 0-4 on a scale of 10) <p>Wait Time –Patients perceived wait time between their scheduled appointment and actual time seen by their provider. Of the 303 responses received:</p> <ul style="list-style-type: none"> • 36 (14%) - 5 minutes or less • 127 (49%) - Between 6 and 15 minutes. • 69 (27%) - Between 16 and 30 minutes • 16 (6%) - Between 31 and 45 minutes • 10 (4%) - Over 45 minutes <p>Patient Experience Most patients rated their patient experience as positive. Of the 258 surveys, 24 (9%) surveys were marked as Fair or Poor. This is a significant decrease from last month.</p> <ul style="list-style-type: none"> • Having a comfortable and pleasant waiting area <ul style="list-style-type: none"> ○ 2 (<1) – Delray, Lewis • Ability to communicate with the practice on the phone <ul style="list-style-type: none"> ○ 12 (5%) – Belle Glade (1), Boca (5), Delray (1), Lake Worth (4), Lewis Center (1) • Ease of scheduling this appointment 			
--	--	--	--	--

- **9 (3%)** - Boca (3), Delray (1), Lake Worth (4), Lantana (1)
- Being informed about any delays during this visit
 - **1 (<1%)** – Lantana

All patients rated their patient experience as positive. Of the 258 surveys, there were no (0) surveys marked as Disagree or Strongly Disagree
The trend over time data & patient comments presented.

Dr. Andric Asked if we have fully made the switch to Phreesia for surveys. As of January 1, 2022, all surveys will be taken via Phreesia. There was a bit of a delay as some questions are being added to be trended over time. However, we are now active in Phreesia.

Dr. Andric would like to add use metrics of the Language line services in the clinics. Dr. Warren finds that there are concerns with patient usability in the clinics and that use of Doximity on the Language Line iPads seems to be the best for patient experience. Dr. Warren would like that enabled also. Mobile connectivity in the clinics seems to be non-existent and providing patients with iPads that are already on our network would provide for a more robust mobile experience at our locations that might require telehealth visits

There is a question about how we would be able to pull that data

David / Marisol to follow up

David /
Marisol

David / Marisol to follow up on possible options for tracking the use of Doximity and Language line

David /
Marisol

	(Patient Satisfaction Survey PowerPoint presented.)	David to also follow up with June on if there will be a way to tie the encounters with patient encounter IDs	David / June	
	<p><u>CSC Activity Reports and Outbound Campaigns</u></p> <p>After Hours Call Return Summary Report – December In December, the Clinic Service Center returned 151 calls received from the After-Hours service. This was a 57% decrease from the previous month. Trends over time reported and a total of 2,445 after-hours calls were processed in 2021.</p> <p>Hospital Follow up calls November 2021 The Clinic Service Center contacted 248 Managed Care patients that required a Hospital Follow Up appointment. This was a 25% increase from the previous month. Of the 248 patients, 41% were seen or scheduled to be seen by their clinic PCP.</p> <p>Outbound Campaigns In December 2021, the Clinic Service Center contacted 56 patients to schedule a follow-up appointment for their hypertension. The Clinic Service Center also contacted 212 patients regarding scheduling a follow-up appointment for their Diabetes. This was conducted in order to meet UDS measures.</p>			

	<p>Patient Appointment Rescheduling</p> <p>In December 2021, the Clinic Service Center contacted 280 patients to reschedule their appointment. The highest amount of reschedules at 224 (98%) was for Ketely Philistin. This was due to the resignation of a provider, causing Ketely to now take on that provider's schedule. This was an increase from November, which had 58 patients rescheduled.</p> <p>(Report presented.)</p>			
<p>GRIEVANCES, COMPLAINTS & COMPLIMENTS</p>	<p><u>Patient Relations Report</u></p> <p>For November 2021, 18 Patient Relations Occurrences occurred between 6 clinics, 2 mobile units, and Clinic Administration. Of the 18 occurrences, there were 0 Grievances and 18 Complaints. The top 5 categories were Care & Treatment, Finance, Communication, Nursing Related and Referrals. The top subcategory with 3 complaints and grievances was billing issues. There was also a total of 2 compliments received across 1 clinic and Clinic Administration.</p> <p>The referral Category made an appearance for the first time. Why referral complaints would be tied to admin and not a specific clinic was asked.</p>	<p>Referrals complaints about referral clerks are attributed to admin because the referral clerks are based out of the home office and not at clinic locations per se. Though there will be times where the referrals will have to be tagged to specific clinics, for the most part, they will be tied</p>	Alexa	2/1/22

	<i>(Patient Relations Report & Patient Relations Dashboard with Graphs presented.)</i>	to admin. Alex will monitor complaints/grievances and place them accordingly.		
QUALITY				
QUALITY AUDITS				
MEDICAL	<u>Hemoglobin A1C/Point of Care Testing</u> We are currently meeting the HbA1C metric.			
	<u>Colorectal Cancer Screening</u> Satisfied: 4,295 (46%) Needs Data: 4,991 (54%) Low performance overall; however, Lewis Center and Mangonia are performing even lower than other clinic locations, even with smaller denominators. There is a high percentage of tests ordered (91%) for patients who meet the criteria for ordered test. The issue is in receiving results for the aforementioned orders.	Belle Glade is outperforming all other clinic locations. Dr. Warren will follow with Belle Glade on what their process is, and how we can improve at our other locations.	Dr. Warren	2/1/22
	<u>Cervical Cancer Screening</u> Satisfied: 5,820 (53%) Needs Data: 5,171 (47%) There has been a slight decrease (54% Satisfied Last Month) in the rate of patients who have met their Cervical Cancer screening requirements. We are using a new data source here, which could be having an effect.	Currently working with Ivonne to develop reports that show follow-up actions for unsatisfied patients. This will result in more targeted efforts to better improve care quality	Dr. Warren	2/1/22

	More sophisticated report for targeted care.	<p>Smart text will be built to allow for better reporting</p> <p>The suggested solution is “PAPs on Demand,” similar to the POD approach.</p> <p>The team will discuss this at the next medical workgroup</p>		
DENTAL	<p><u>Dental Sealants</u></p> <p>84% (n=579) January-November 2021</p> <p>56% November 2021</p> <p>The age group is – 6-9 with moderate to high Carries risk.</p> <p>Dental sealant is usually done on the same day.</p>	Called a meeting to discuss how data is being collected, as it is of concern to Dr. Cucuras.	Dr. Cucuras Ivonne	2/1/22
	<p><u>Same Day Extractions</u> (Limited Exams)</p> <p>Limited Exams (n= 372)</p> <p>Same Day Extractions: 187 (50% n=372)</p> <p>Returns (Follow-Up): Patients with a future extraction appointment type– 37 (10% n=372)</p> <p>Returned within 21 days for extraction</p> <p>29 (78% n=37)</p>	Dr. Andric to meet internally with the Dental team and Business Intelligence to discuss Dental Dashboard and increase familiarity.	Dr. Andric / Dr. Cucuras	

	<p>Antibiotics Given: Patients without a future extraction appointment type</p> <p>66 (18% n=372)</p> <p>Extraction not needed: non-emergent</p> <p>47(13% n=372)</p>

INTRODUCTION

C. L. Brumback Primary Care Clinics (CLBPCC) works diligently to improve the health of families in Palm Beach County, including the indigent and medically underserved population. It provides an accessible cost-effective, high-quality and comprehensive primary health service programs.

CLBPCC strives to ensure that all service delivery is compliant with industry standards, government regulations, and contractual agreements.

CLBPCC works to integrate quality and safe practices into all operations, promoting accountability throughout the organization. CLBPCC also works to promote a culture that encourages real-time staff reporting of errors and near-misses.

STATEMENT OF PURPOSE

As part of providing quality care in alignment with the C. L. Brumback Primary Care Clinics Mission Statement, CLBPCC has implemented the Quality Improvement (QI) Program under the supervision of the FQHC Medical Director. The purpose of the QI Program is to track clinical, operational and other measures to promote quality, ensure patient safety and improve patient care, aligned with the Health Resources and Services Administration' (HRSA) clinical and financial performance measures. The QI Plan is also designed to move CLBPCC toward achieving professional accreditations in health care and improving population health at reduced per capita cost.

SCOPE

The scope of the QI Plan is comprehensive and serves as a guide to all clinical and operational QI activities in CLBPCC.

The QI/QA program addresses the following:

1. Quality assurance and improvement

2. Utilization of health center services
3. Patient satisfaction and patient grievance processes and
4. Patient safety, including adverse events

The plan focuses on:

1. Designing, implementing, monitoring and improving processes
2. Addressing findings identified through audits and assessments
3. Ensuring accountability at all levels
4. Establishing clear differentiation of responsibilities
5. Meeting all requirements of the QI Program required by HRSA, the Federal Tort Claims Act (FTCA), Patient-Centered Medical Home (PCMH) Accreditation and other grant-related requirements and
6. Establishing key initiatives

QI PROGRAM MONITORING

Board of Directors

The CLBPCC is governed by the Federally Qualified Health Center (FQHC) Board of Directors (BOD) which is responsible for providing oversight and direction related to care and services provided by the organization. The BOD is accountable for compliance with the Quality Improvement Plan for CLBPCC. Accountability begins with the Board's initial approval of the QI Plan and continues through the re-approval of the plan, which takes place at least every three years (more often if substantial changes are made in the CLBPCC QI Program).

BOD delegates responsibility to the AVP & Executive Director of Clinics & Pharmacy to ensure that resources such as personnel, finances and equipment are available for QI activities. The AVP & Executive Director of Clinics & Pharmacy delegates primary responsibility for implementing, managing and monitoring CLBPCC QI Program efforts to the FQHC Medical Director. He or she reports to the Board on a monthly basis and presents

the Quality Council meeting minutes, summary Uniform Data System (UDS reports) and at least quarterly QI/QA assessments.

The BOD is responsible for the following activities:

1. Reviewing and approving the QI Plan
2. Reviewing summary reports of the QI Program
3. Credentialing and privileging of provider staff
4. Reviewing and approving policies
5. Reviewing summary reports and patient complaints
6. Reviewing the results of quality audits, patient satisfaction and trend report results
7. Reviewing legal claims related to patient care

Quality Council

The Quality Council is a cross-functional committee that meets monthly (per our bylaws). It includes clinical and administrative staff and serves as the umbrella committee for quality across the CLBPCC service lines. The Quality Council is chaired by the Executive Director of Corporate Quality.

The Quality Council reviews and makes recommendations for clinical services, monitors progress of Health Care objectives, reviews clinical outcome measures, monitors and review quality assurance and continuous quality improvement. It also monitors principles of practice, credentialing, community needs survey data, patient satisfaction and recommends new clinical programs. The Quality Council will meet on a monthly basis. The Executive Director, or his/her designee, will serve as a non-voting, ex-officio member of this committee.

The Quality Council provides leadership by defining organizational priorities as agreed upon and continually assessing the CLBPCC needs for QI improvement activities. The Quality Council selects and prioritizes quality metrics to be monitored and assesses the data source and integrity for each metric. The Quality Council sets a performance goal for each metric, assigns responsibility for improvement, institutionalizes improvement changes, and

recommends development of policies and procedures as needed. The Quality Council reviews incidents, complaints, grievances, high-risk condition reports, and any sentinel events. The Quality Council develops the QI Plan, which shall be approved by the BOD. Recommendations discussed and approved at the Quality Council meetings are presented to the BOD at the next full BOD meeting by the FQHC Medical Director for review and approval.

This Quality Council consists of:

- FQHC Senior Management (Executive Director, Medical Director, Associate FQHC Medical Director, Director of Dental, Director of Clinic Operations,, Director of Behavioral Health, Director of Nursing, Director of Patient Experience)
- HCD Corporate Management (VP & Chief Medical Officer, Executive Director of Corporate Quality)
- Senior Risk Manager, Patient Relations Manager, Operations Process Manager, Corporate Quality Reporting Analyst, Clinic Quality Analyst
- Invited Guests as required

Workgroups

Quality workgroups (e.g., Risk Workgroup, Medical Workgroup, etc.) recommend process improvement strategies and ensure implementation down the service line; review chart audits and peer review summaries; analyze Clinic Quality Site Visit summaries and recommend improvements. The Workgroups ensure that the chosen metrics are being monitored, data is being collected, and those metrics not meeting the required threshold are moved into the QI action phase. The workgroups will work to determine whether findings are employee specific, clinic specific, or systemic issues. Quality Workgroups validate data, evaluate effectiveness of QI activities, document improvements and ensure that identified quality issues are fully resolved. The workgroups will also identify areas of improvement, initiate Quality Improvement opportunities, and provide any corrective actions to improve the delivery of quality care. Ad-hoc committees may be formed as needed to address unique challenges that can be addressed and resolved in smaller workgroups on shorter timelines.

Pertinent issues, metrics, summaries as well as recommended action plans are presented monthly to Quality Council for further review and discussion.

QI/QA Assessments

Clinic Quality Site Visits (QSV) are performed at each clinic location and for each clinic service line at least quarterly. The QSVs are conducted by designated leadership. The QSV is a combination of facility assessments, staff interviews/meetings, and. Facility assessments include review of compliance / regulatory requirements, HIPAA and Privacy Practices and assurance, Equipment and Supply checks, Quality Binders and QI Logs, patient care areas, Lab-related activities, Vaccine Management, Safety and Security measures, clinic flow, OSHA, Infection Control, and special focus items for each service line: Medical, Dental, Behavioral Health and Clinic Operations. During the QSV, the Quality team meets with staff, assesses competencies, shares provider metrics, reports clinic trends, identifies problems and provider corrective actions, provides staff training, requests staff input and feedback. At the conclusion of a QSV, results are relayed to the Clinic admin team where results are reviewed in appropriate workgroups, new protocols established, and goals for corrective actions are set. Information from these actions are gathered and relayed to Practice Management, Clinical Leads, and other available clinic staff for implementation.

Team-member Meetings

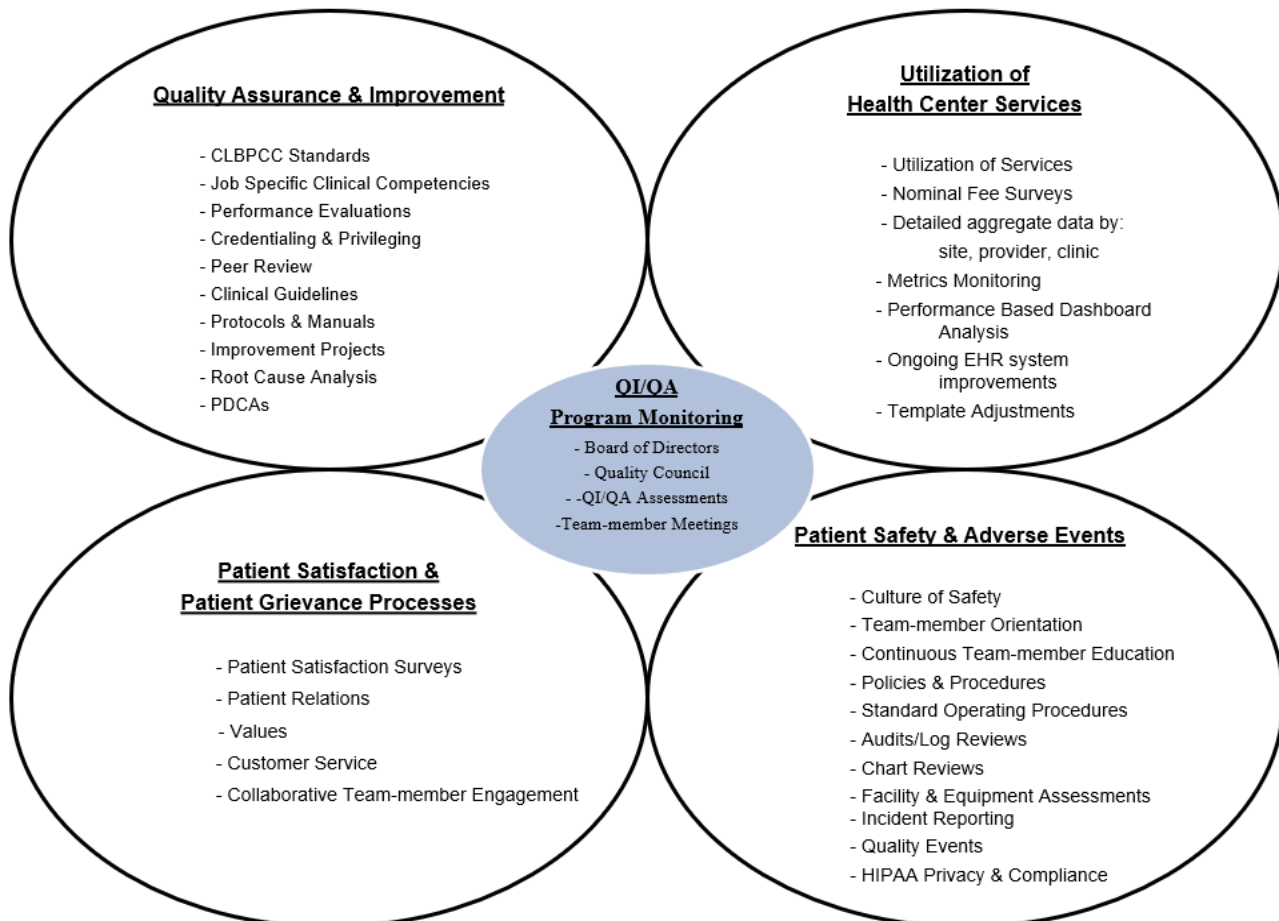

Team-member meetings are held to provide an opportunity for Clinic Administration and Practice Management to share clinic updates and provide education and/or training to clinic team members. During this time, team members also have the opportunity to ask questions, learn best practices from other clinics and share opportunities for improvement. Feedback and comments are gathered from team members and brought back to relevant workgroups for further discussion and follow-up.

Title	Quality Responsibility
Chief Medical Officer	Provide strategic oversight of quality initiatives across the organization.
Executive Director of Corporate Quality	Responsible for implementing, managing and updating CLBPCC QI Program in accordance with the HRSA Compliance Manual. Implements initiatives resulting from strategic planning. Responsible for oversight and direction for clinics quality metrics. Leads customization and optimization of EHR to support accreditation and performance improvement efforts. Hold staff accountable for achievement of goals as determined by metrics. Ensures consistent and repeatable data collection. Responsible for grant compliance, including Uniform Data System (UDS) reporting. Responsible for ensuring the development of appropriate policies and procedures.
AVP & Executive Director of Clinics & Pharmacy	Provides direction to QI Program activities and supports Quality Improvement activities assuring that quality improvement initiatives are consistent with our mission. Leads strategic planning for the clinics.
FQHC Medical Director	Responsible for assessing the CLBPCC QI Program. Responsible for periodic assessment of the appropriateness of the utilization of services and the quality of services provided or proposed to be provided to individuals served by the center. Responsible for oversight and direction for medical providers. Responsible for providers credentialing

	and privileging. Responsible for after-hours coverage and on-call schedule and procedure. Assures that all activities of the medical staff are in alignment with QI plan. Responsible for adoption of clinical guidance for providers. Responsible for pharmaceutical quality review of prescribing practices by providers and reporting on their compliance with best practices. Presentation of Peer Review results for quality documentation in patient records. Responsible for development of the electronic health record templates and standardized order sets. Responsible for grant compliance with clinical performance expectations. Responsible for development of appropriate policies and procedures.
Associate FQHC Medical Director	Responsible for Uniform Data System improvement of quality metrics over the course of each calendar year and managing the identified quality champions across our clinics. Responsible for grant compliance with clinical performance expectations. Responsible for development of appropriate policies and procedures.
Director of Clinic Operations	Responsible for periodic assessment of the appropriateness of the utilization of services and the quality of services provided or proposed to be provided to individuals served by the center. Producing and sharing reports on QI/QA to support decision-making and oversight by key management staff and by the governing board regarding the provision of health center services.

	<p>Responsible for business processes including flow of the clinics, patient access and cycle time, and efficient operations in a fiscally sound manner. Responsible for accuracy of the financial and business-related EHR documentation and business-related reports and quality metrics. Responsible for coordinated information flow such as record transfers and coordination of care with other providers. Suggests customization and optimization of EHR. Responsible for development of appropriate policies and procedures. Responsible for communicating action items to FQHC Practice Management.</p>
Director of Patient Experience	<p>Ensures patient experience data are collected and provides directions on improvement efforts based on this data. Ensures that patient complaints are answered in timely manner. Responsible for timeliness of patient encounter closure. Responsible for oversight of Call Center and coordinate patient experience continuum activities including all patient satisfaction related reports. Responsible for coordinated information flow such as referrals and coordination of care with other providers.</p>

The following diagram summarizes the scope of the QI Program at CLBPCC:

QUALITY ASSURANCE & IMPROVEMENT

CLBPCC Standards

CLBPCC standards are defined in our Policies and Procedures, and Standard Operating Procedures (SOPs) that provide the framework for all programs.

All BOD approved Policies and Clinic Procedures are posted on the organization's Intranet SharePoint site, so that all staff can access them at any time. New hires are instructed on how to access the policies and procedures at their initial orientation and existing employees are advised by their supervisors when new policies are added. Additionally, all new Policies,

Procedures, and Standard Operating Procedures are discussed during the staff meetings and clinic huddles and are a standing agenda item. Once a new policy is reviewed with staff, sign-off sheets are utilized to track that training is completed. A copy of the sign-off sheets is kept for each clinic.

Policies and Procedures are grouped into fifteen categories: Administration, Compliance, Human Resources, Information Technology, Finance, Credentialing, Risk, Clinical, Dental, Pharmacy, Behavioral Health, Women's Health, Substance Abuse, Telemedicine, and Clinic Service Center.

Job Specific Clinical Competencies & Performance Evaluation

Each staff is presented with a job description upon their first day of employment, as well as a defined list of detailed job-specific competencies. An assessment of the competencies for the staff is completed during each employee's performance evaluation (the initial evaluation is done during on-boarding, again after three months of employment, followed by a six-month evaluation, and then a one-year evaluation. Evaluations are done annually thereafter.). Assessment of the competencies is completed by immediate supervisors with input provided by key stakeholders.

Credentialing & Privileging

CLBPCC has policies in place that ensure verification of the credentials of health care practitioners and define their privileges to increase safety of the patients and provide the highest quality care to our patients. The Health Care District of Palm Beach County has established a "Credentialing and Provider Service Department" that works with the CLBPCC in all credentialing activities. Credentialing with primary and secondary source verification is performed on all licensed or certified health care staff members before assuming patient care activities. Completed and verified packets are reviewed by the corresponding Director (Medical, Dental, and/or Behavioral Health) and the Director of Credentialing and Provider Services established under the Health Care District of Palm Beach County, the co-applicant to the FQHC's. For all Licensed Individual Practitioners, the corresponding Director (Medical,

Dental, Women's Health, and/or Behavioral Health) makes recommendations to approve (or not approve) applicant for credentialing and privileging to the BOD. These recommendations are based on thorough review of the practitioner's credentials and evaluation of clinical qualifications. Renewal of all previously credentialed and privileged staff will be performed every two years.

Peer Review

CLBPCC has an ongoing Provider Peer Review process as a mechanism of having medical, dental, women's health, and behavioral health providers work routinely reviewed by their peers. The purpose of Peer Review is to ensure the delivery of high-quality care, assess clinical performance, and is used to reappoint providers in the credentialing and privileging process. Charts are audited by using an electronic *Peer Review Form* in the Electronic Risk/Quality reporting platform. Please refer the Peer Review Policy and Procedure regarding the minimum number of charts requiring review per quarter. Clinicians are required to respond to all identified deficiencies. Any identified deficiencies affecting direct patient care will be corrected at the future visit with the patient. Peer review data is aggregated and reviewed monthly with providers during provider meeting as well as Quality Council meetings. Any trends on an individual level will be discussed privately with the clinician and the corresponding FQHC Director and will result in a corrective plan of action for the clinician. Provider specific Peer Review summaries are reviewed during provider's re-credentialing process.

Clinical Guidelines

CLBPCC adheres to current evidence-based clinical guidelines, standards of care, and standards of practice, as applicable. Program-specific evidence-based guidelines from National sources (including, but not limited to: the American Diabetes Association, American Heart Association, the United States Preventative Services Workgroup guidelines, etc.) are adopted and followed by CLBPCC providers and updated when necessary. Similarly, the dental program also follows guidelines (including, but not limited to: The Organization for Safety, Asepsis, Prevention (OSAP), and Lexi-comp). These guidelines are discussed

during monthly provider meetings. Adherence to these guidelines are monitored via periodic chart reviews, peer reviews, audits, and the *Tableau* platform.

In addition, CLBPCC maintains an organization-wide subscription to “UpToDate”, an online clinical information resource that is evidence based and constantly updated. “UpToDate” encompasses all current clinical practice guidelines and is recommended and endorsed by the Society of General Internal Medicine, the American Academy of Pediatrics, and the American Academy of Family Practice. It is CLBPCC expectation that our medical clinicians refer to “UpToDate” for all current guideline reference.

Protocols & Manuals

CLBPCC works diligently to develop Standard Operating Procedures (SOPs) for all clinical and nonclinical operations in order to ensure standardized training so that patient care is consistent. All departments develop and maintain their own protocols consisting of SOPs (including, but not limited to: Frontline Manual, Referrals Processing Manual - *Referral Institute*, Clinical Manual, Dental Clinical Manual, Call Center Manual, etc.). Clinical and Dental Protocols are grouped into two categories: Adults and Pediatrics. These protocols consist of all standard nursing procedures, standing lab orders, immunization standards and protocols, process maps, screen prints, etc. Every reasonable attempt will be made to streamline our protocols so they follow clinical competencies.

Improvement Projects

Process Improvement is an ongoing system. Through monthly Quality meetings, established reporting systems & protocols, and consistent review of services, CLBPCC staff are able to identify areas in need of improvement in a timely and consistent manner. It is expected that all improvements should enhance our processes and ultimately the health care outcomes of our patients.

The following criteria are followed when establishing priorities for Performance Improvement Projects:

- Any process/procedure that presents a significant risk to patients and staff members
- Any process/procedure that is high in volume (regardless if low risk)
- Any process/procedure that is high risk (regardless if low volume)
- Any process/procedure of high expense or conversely one that could save money

CLBPCC strives to maintain the highest quality standards. Leadership provides thorough, detailed analysis of all sentinel events, performance that significantly reflects sub-standard care, and trends or patterns that significantly deviate from recognized standards of care.

All performance improvement processes will begin with expectation of what is determined to be minimum acceptable standard of compliance for CLBPCC. All criteria used in the evaluation process will be measurable and responsibility for implementation of the project defined.

Effective actions that might be taken once issues are thoroughly evaluated include, but are not limited to:

- Improvement in operations or facilities
- Actions to improve staff knowledge, such as changes in orientation, in-service training and continuing education Programs
- Redistribution or addition of staff, supplies or equipment
- Change in clinical or administrative policies and procedures
- Changes in modifications in clinical privileges
- Individual counseling or disciplinary action

All final findings, conclusions and recommendations are presented to the Quality Council for review, discussion and implementation of change as appropriate.

Root Cause Analysis

Root Cause Analyses are used as our process for identifying, analyzing, and addressing patient adverse events primarily for in-depth analysis of an adverse incident (or “sentinel

event”). However, it is also used as the first step in our improvement process by asking the “Five Whys”. By repeatedly asking the question “Why”, you can peel away the layers of symptoms which can lead to the root cause of a problem. With each successive step, the team asks “Why?” again, until it has been asked five times. This approach enables the team to dig deeply into the source of the issue, generally resulting in a better understanding and, thus, a more functional solution.

Plan Do Check Act (PDCA)

CLBPCC uses QI tools such as PDCA cycles, process mapping, brainstorming and other techniques for problem identification and/or process improvement.

Plan - Determine what data will be collected and what change/intervention/test to be performed.

Do - Carry out the determined change/intervention/test then collect data again to begin analysis.

Check - Complete analysis of data, summarize what was learned and compare to prediction.

Act – Implement the change tested and study again.

Frequency of data collection and the timeline for sampling of events or activities monitored will be determined based on the frequency of the identified problem. Measurement criteria will be modified as needed based on assessment activities and current literature.

In addition to standard data collection methods (EHR reports, incident reports, management reports, etc.), performance is monitored by patient/staff satisfaction surveys, suggestion boxes, staff reporting errors, and staff suggestions.

UTILIZATION OF HEALTH CENTER SERVICES

Utilization of Services

CLBPCC conducts periodic assessments of the appropriateness of the utilization of services and the quality of services provided or proposed to be provided to individuals served by our clinics. These assessments are:

- Conducted by physicians or by other licensed health professionals under the supervision of physicians;
- Based on the systematic collection and evaluation of patient records;
- Assess patient satisfaction, achievement of project objectives, and include a process for hearing and resolving patient grievances; and
- Identify and document the necessity for change in the provision of services by the center and result in the institution of such change, where indicated.

Additionally, a detailed annual review is undertaken to examine the relevance of service area boundaries, to identify opportunities to better serve the needs of the target population and to ensure adherence with compliance requirements.

Sliding Fee Scale Program and Nominal Fee Surveys

Sliding Fee Scale Program and Nominal Fee Surveys are conducted at least every three years to ensure the Sliding Fee Scale Program is being helping the patients we serve and the flat nominal charge(s) are set at a level that is considered to be nominal from the perspective of the patient based on input from patient surveys.

Detailed Aggregated Data by Site, Provider, Clinic

CLBPCC conducts a monthly overall, as well as clinic-specific and provider-specific, analysis of productivity including number of patients seen by each provider in each service line as compared to targets set for that provider, daily average, percent monthly target achieved and payor mix.

Metrics Monitoring

CLBPCC monitors clinical outcomes (such as UDS requirements, PCMH, and HEDIS indicators), clinical patient care (such as access and cycle time), and business process metrics (such as operational efficiencies and maximized revenue). For selected metrics, the Quality Council leadership establishes a goal and related plan for performance measurement.

Clinical Outcome Measure Audits

UDS Measure Audits and Meaningful Use Audits are performed monthly and presented to the monthly Quality Council meetings as overall “up to date” reports and/or clinic-specific or provider-specific reports. Reports are measured against national goals and closely monitored from month to month. The PDCA process is mapped for the selected measures not meeting the goals.

Clinical Patient Care

CLBPCC continuously monitors both fundamental primary care metrics and program-specific quality metrics for initiatives such as access, cycle time, health information technology, referral tracking, chronic disease management, and team care. These may be measured with reports such as *Patient Cycle Time*, *Third Next Available Appointment*, *Percentage of Closed Referrals*, *Number of Referrals vs. PCP Encounters*, *Percentage of Chronic Disease Management Patients*, and *Percentage of Patients who are Compliant with Team Care Plans and Goals* as well as other improvement measures.

Business Processes

CLBPCC continuously monitors finances, coding and billing accuracy and consistency, patient access, staff turnover, and efficiencies seen as a result of PCMH. These may be measured with reports such as *Cash Collection* and *Coding/Billing Audits*.

Performance Based Dashboard Analysis

Selected performance measures are presented on a monthly basis to the Quality Council and BOD relative to pre-established goals. Metrics identified as deterring from our goals are followed and expected improvement is specified by leadership. Quality Councils track and report progress until improvement is reached. When improvement activity is complete, the Quality Councils re-analyze dashboard outcome data to ensure improvements are sustained. Dashboards are shared with the clinics and personalized goals presented to providers at least quarterly to increase staff awareness of goals achieved and identify where improvements can be made.

Additionally, CLBPCC utilizes a *Tableau* platform which provides a wide variety of user-friendly performance-specific dashboards to drive improvement in population health. This unique high-tech software is based on extrapolated data from the EHR which is provided to the software vendor for aggregation. This tool provides performance feedback and comparative benchmarking for the selected measure set. Providers have access to the *Quality Report Module* that they may use for actionable patient lists with the goal to improve these metrics. *Clinic Quality Boards* are also updated on a monthly basis in each clinic break-room.

Ongoing EHR System Improvements

EHR improvements can come from new interfaces that improve efficiencies, EHR enhancements and updates from the vendor, as well as suggested improvement from internal customers or consultants. We aim to review our health IT tools, add-on products, and software solutions on an ongoing basis.

Template Adjustments

CLBPCC internal customers strive to offer and suggest improvements such as provider, program or service-line specific order sets which streamline documentation and increase overall standardization.

PATIENT SATISFACTION & PATIENT GRIEVANCE PROCESSES

Patient Satisfaction Surveys

Patient Satisfaction Surveys enable CLBPCC to ensure a process is followed for assessing patient satisfaction and patient experience and to better meet patient expectations and create loyalty. The Patient Satisfaction Survey is offered to patients during operating hours in the clinic through staff reminders and QR codes. It is also offered through our clinic website. Results are compiled monthly and trended over time.. The summary of the results are shared with the staff, Workgroup, Quality Council, and the BOD.

Patient Relations

CLBPCC monitors all patient relations activities including Patient Complaints, Grievances, and Compliments. CLBPCC has a BOD approved Patient Grievance Policy and Procedure that describes our process for hearing, receiving, reviewing and resolving patient grievances. The Patient Experience Director oversees all aspects of the patient experience. The Patient Relations Manager processes, investigates, tracks, provides follow-up on Patient Grievances, Complaints and Compliments. All patient complaints and grievances are reported to the Executive Director, Medical Director, Patient Experience Director and appropriate Program Director by the Patient Relations Manager. The Patient Experience Director provides monthly reports to the Quality Council and at all Clinic Workgroup. CLBPCC presents Patient Relations data quarterly at the Corporate Quality, Patient Safety and Compliance Committee Meeting.

Values

CLBPCC values the following:

Patient Focus – Providing high quality services for patients, which exceed their expectations. Physical space, patient care processes and clinical and business procedures at the clinics respect the comfort and dignity of the patient at all times. Patient satisfaction is assessed regularly through patient satisfaction surveys. Patient complaints are answered in timely manner. Patient should have timely access to appointments as measured by

appointments availability. Access relates to ease and timeliness in obtaining care and includes hours of operation, after-hours on-call systems and telephone systems. These must meet the needs of patient.

Vitality and Efficiency – In order to deliver the highest quality of care, our staff needs to be well trained, satisfied, and empowered to serve the patients. Our organization must be fiscally sound in order to continue our Mission. CLBPCC are devoted to using available resources to produce the highest quality health services.

Equity – All patients will be served with dignity and respect. Sliding fee scale fees will be available to those uninsured patients who qualify according to federal regulations. Pharmacy Programs utilizing the 340B Program are available to our patients. Multilingual staff and appropriate translations are available to patients. No disparities regarding race, ethnicity, or payer class will exist within CLBPCC.

Accessibility – Access to care for underserved communities and patients is achieved by forming outreach teams, careful planning, marketing, and removal of barriers of care. This includes the establishment of extended hours at specified clinics and the availability of a After Hours Answering Service.

Leadership Involvement – The BOD and Executive Director provide strong leadership, direction, and support of QI activities. This involvement of organizational leadership assures that QI initiatives are consistent with our mission and strategic plan.

Data Informed Practice – CLBPCC uses feedback loops and data to better inform the practice and make fact-based decisions.

Analytic Tools – For continuous improvement of care, tools, and methods are needed that foster knowledge and understanding. CLBPCC uses a defined set of analytic tools, reports, and metrics for both clinical patient care and quality of business processes to

turn data into information. This information is reported at the Quality Council meetings each month and escalated to the Quality Council as appropriate.

Customer Service

CLBPCC strives to partner with patients and families to understand each patient's unique needs, culture, values and preference. We are working to change our culture from reactive to proactive in addressing patient experience. We aim to develop and support an empathetic culturally diverse, competent, motivated and service oriented-workforce; to recruit and retain highly competent team-members. We smile.

Collaborative Team-member Engagement

CLBCC approach to quality improvement is that all staff, regardless of their position, are considered to be customer service improvement agents. They receive training during their orientation and training on the QI Program, including patient satisfaction and are expected to participate in these activities. Customer service and QI activities are considered to be embedded in all operations, not separate from the full operations.

PATIENT SAFETY & ADVERSE EVENTS

Culture of Safety

CLBPCC strives to maintain a patient-centered and "Just Accountable" culture that encourages all employees to provide safe quality care and conduct themselves in a professional, team-driven manner.

Team-member Orientation

New staff at CLBPCC complete new employee orientation. During the on-boarding period, new employees receive job-specific training that includes, but is not limited to: training on clinical manuals, electronic health/dental records training, clinical competencies, policies and procedures, quality metrics, HIPAA compliance, and Risk & OSHA. During this period,

skills are assessed for clinical and dental privileging. All new clinic employees are paired with a clinic peer for a minimum of two weeks. Their work is assessed during the first month by an assigned evaluator, via chart audits, and during 1:1 meetings with their supervisor, or a designated Manager.

Continuous Team-member Education

Education of staff at CLBPCC occurs on a continuous basis. As the need arises, updated policies and procedures are reviewed with staff. Select Policies and Procedures are reviewed with staff annually. Employee trainings are tracked through the use of sign-in sheets. In the event an employee missed a required training, the employee is provided a make-up training. Selected training is provided on an annual basis (such as OSHA & Risk, Medical Malpractice, clinical skills, guideline review, EHR/EDR, and standing orders). All licensed medical clinical staff have access to continuing education through an organizational subscription.

Policies & Procedures and Standard Operating Procedures (SOPs)

CLBPCC seeks to implement best practices and streamline processes across all clinics and departments. Policy and Procedure are established by Clinic Administration with input from Corporate Departments (Legal, Compliance, Information technology, Finance, Human Resources, Provider Services, Quality, and Risk) as needed. All clinic policies are reviewed and signed by the FQHC Board. The Policies and Procedures of the Healthcare District Palm Beach County are reviewed and adopted by the CLBPCC and stored in an electronic version-controlled system on SharePoint. All policies and procedures are reviewed at a minimum once every three years or as needed to reflect current processes. The CLBPCC also creates Standard Operating Procedures to introduce new workflows or to provide specific instructions on a new process.

Audits/Log Reviews

CLBPCC conducts scheduled clinic quality audits by conducting clinic quality site visits on rotating basis with the goal that each clinic is visited at least quarterly. During the quality site

visits, all clinics are reviewed and audited through the use of an established audit tools that encompasses a variety of topics (such as compliance signage, equipment, safety, OSHA, inventories, and employee performance). Visit findings are recorded by using a standardized checklist. Visit findings are then tracked by documenting newly created action items and by updating ongoing action items. Findings and action items are presented at Clinical Workgroups and Quality Council Meetings. A copy of findings is placed in each clinic for staff review at meetings and clinic huddles.

CLBPCC maintains the Quality Improvement Action items log that identifies all action items from Workgroups, Clinical Site Visits, Quality Council Meetings, Internal/External Audit findings, Accreditation Bodies, Grant-Funded Programs, and Administrative and Corporate Departments.

Chart Reviews

Chart Audits of the Electronic Health and Dental Records are done on a routine basis by Clinical Directors, Clinic Quality Analyst, Risk Manager, Clinical Coordinators, and Chart Auditor and through the Peer Review process. Performance Measures including UDS indicators, specific grant program requirements, and insurance company's requirements are monitored, analyzed, and reported through electronic reports generated in the "Tableau" database and the Electronic Medical Record systems. The results of clinical audits are presented in the Clinic Workgroups and Quality Council meetings in the form of dashboards, graphs, and pivot tables. These results are escalated to the Board of Directors as necessary.

Facility & Equipment Assessments

CLBPCC seeks to provide an environment of care where safe operations of medical equipment implements and supports the care of patients. CLBPCC has implemented the "Management of Clinical Equipment" SOP that establishes, supports, and maintains a Program that is based on assessed clinical and physical risks of the equipment, monitoring and evaluation of organizational practices, applicable law and regulation, and accepted practices within the healthcare industry. Clinically validated medical and dental equipment

is purchased whenever possible. Users of medical and dental equipment receive training on the safe operation of all equipment as part of their orientation to specific job responsibilities. Training is ongoing and as necessary. All equipment is inspected, tested, and maintained at least bi-annually through agreements with vendors. For retired or non-functioning equipment, staff follow the “Lock-Out Tag-Out for Inoperable Equipment” policy and procedure.

Incident Reporting

The office of Corporate Risk, established under the Health Care District of Palm Beach County, has been tasked to lead CLBPCC Risk Management activities, but efforts are made in every service line. The Medical Director, Dental Director, Women’s Health Director, Behavioral Health Director, Practice Operations Director, Nurse Manager, Clinic Quality Analyst, Dental Quality Coordinator, and Practice Management or delegate work with all staff to discuss actual, potential, and alleged risk management cases and potential system improvements to improve care of all CLBPCC sites. CLBPCC stresses timely, constructive and educational dialogues between involved parties in continuous efforts to improve the quality of the patient care. CLBPCC has a BOD approved “Risk Management Plan” that defines the goals and objectives of the Risk Program including a process for identifying, analyzing, and addressing patient safety and adverse events and for implementing follow-up actions, as necessary. This plan emphasizes implementing evidence-based best practices, learning from incident analysis, and providing constructive feedback, rather than blame and punishment. In a just culture, unsafe conditions and hazards are readily and proactively identified, medical or patient care incidents are reported and analyzed, issues are openly discussed, and suggestions for systemic improvements are welcomed.

Risk Management:

The Corporate Risk and FQHC Leadership incorporates best practices throughout its operations to provide a safe environment for staff and patients. CLBPCC maintains a culture of patient safety and performs routine activities to ensure staff are educated and reminded of patient safety practices. The Director of Corporate Risk Management, established under

the Health Care District of Palm Beach County, co-applicant to the FQHC's, works alongside the Clinic Risk Manager to provide direction, oversight and support to CLBPCC Risk Management education and activities. The Clinics Risk Manager provides monthly reports to the Quality Council on all incidents from the previous month. Risk Management Education/Activities are conducted and tracked in accordance with the Risk Management Plan.

Quality Events

CLBPCC has established a process in which clinical and/or operational challenges that have been noted as a trend can be documented, analyzed, and improved through a "Quality Event" portion of the Risk & Quality Electronic Management System. Those events are opportunities to provide corrective actions or quality improvement activities in a more structured way to improve the overall quality of service and minimize risk. Quality events are reviewed and tracked by the CLBPCC Clinic Quality Analyst. Quality Events are reported at the Quality Councils. The Risk Manager provides oversight and support for reviewing and handling Quality Events.

HIPAA Privacy and Compliance

CLBPCC maintains the confidentiality of patient records, including all information as to personal facts and circumstances obtained by the health center staff about recipients of services. Specifically, CLBPCC does not divulge such information without the individual's consent except as may be required by law or as may be necessary to provide service to the individual or to provide for medical audits by the Secretary of Health and Human Services or his/her designee with appropriate safeguards for confidentiality of patient records.

KEY INITIATIVES

Quality and Patient Safety

To provide quality, patient centered health care that can be defined and measured. To enforce and invest in a pervasive culture of safety with zero preventable errors.

People

To be the employer of choice. To develop and support a culturally diverse, competent, motivated and service oriented workforce. To recruit and retain highly competent providers to meet patient needs.

Cost

To maximize taxpayer investment while advancing the mission and vision. To offer unquestionable value to payers and consumers.

Community Leader

To lead Palm Beach County in improving health status and access to care through community coordination and collaboration. To protect and advance the county's health care safety net.

Data-Driven Culture

To encourage the use of data to improve decision making and inform strategy by promoting a data-driven culture using "democratized" data.

6B	11a	Breast Cancer Screening	Percentage of women 50-74 years of age who had a mammogram to screen for breast cancer in the 27 months prior to the end of the Measurement Period	Women 51-74 years of age with a visit during the measurement period	Women with one or more mammograms during the 27 months prior to the end of the measurement period	<p>Women who had a bilateral mastectomy or who have a history of a bilateral mastectomy or for whom there is evidence of a right and a left unilateral mastectomy.</p> <p>Patients whose hospice care overlaps the measurement period.</p> <p>Patients 66 and older who are living long term in an institution for more than 90 consecutive days during the measurement period.</p> <p>Patients 66 and older with advanced illness and frailty</p>	CMS125v9	45.3%	COVID-19 Pandemic	None	<p>Documentation in the medical record must include date of test, who performed it, and test result</p> <p>Do not count in the numerator:</p> <ul style="list-style-type: none"> Referrals to third parties without documentation of results Statements from patient that it was done—without documentation Refusal of patient to have the test <p>Include women in the evaluation of this measure if they had any medical visit during the year, regardless of the nature of the visit</p> <p>Include patients who were provided mammography services elsewhere</p>

Table	Line	UDS Measure Name	Brief Description	Denominator (Universe)	Numerator	Exclusions or Exceptions	eCQM # (for 2021 Report)	2020 National Average	Major Differences from 2019 to 2020	Major Differences from UDS to eCQM	Reminders
6B	12	Weight Assessment and Counseling for Nutrition and Physical Activity for Children and Adolescents	<p>Percentage of patients 3 - 17 years of age who had an outpatient medical visit and who had:</p> <ul style="list-style-type: none"> Evidence of height, weight, and body mass index (BMI) percentile documentation and who had documentation of counseling for nutrition and had documentation of counseling for physical activity during the measurement period 	Patients 3 through 17 years of age with at least one medical visit during the measurement period	<p>Patients who had:</p> <ul style="list-style-type: none"> Their BMI percentile (not just BMI or height and weight) recorded during the measurement period AND who had documentation of counseling for nutrition during the measurement period AND who had documentation of counseling for physical activity during the measurement period 	<p>Patients who have a diagnosis of pregnancy during the measurement period</p> <p>Patients who were in hospice care during the measurement period</p>	CMS155v9	65.1%	COVID-19 Pandemic	<p>eCQM denominator is limited to outpatient visits with a primary care physician or obstetrician / gynecologist. UDS includes children seen by nurse practitioners and physician assistants</p> <p>Numerator BMI, nutrition, and activity are reported separately in the eCQM, but combined in the UDS</p>	<p>Include children and adolescents in the evaluation of this measure if they had any medical visit with the health center during the year</p> <p>Do not count well-child visits as automatically meeting the measurement standard</p>

Table	Line	UDS Measure Name	Brief Description	Denominator (Universe)	Numerator	Exclusions or Exceptions	eCQM # (for 2021 Report)	2020 National Average	Major Differences from 2019 to 2020	Major Differences from UDS to eCQM	Reminders
6B	13	Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan	Percentage of patients aged 18 years and older with BMI documented during the most recent visit or within the 12 months prior to that visit and when the BMI is outside of normal parameters, a follow-up plan is documented during the visit or during the previous 12 months of that visit	Patients 18 years of age or older on the date of the visit with at least one medical visit during the measurement period	Patients with a documented BMI (not just height and weight) during the most recent visit in the measurement period or during the previous 12 months of that visit, AND when the BMI is outside of normal parameters, a follow-up plan is documented during the visit or during the previous 12 months of the current visit. Normal parameters: Age 18 years and older BMI was greater than or equal to 18.5 and less than 25 kg/m ²	<p>Patients who are pregnant during the measurement period</p> <p>Patients receiving palliative care during or prior to the visit</p> <p>Patients who refuse measurement of height and/or weight, or refuse follow-up during the visit</p> <p>Patients with a documented medical reason during the visit or within 12 months of the visit, including:</p> <p>Elderly patients for whom weight reduction/ weight gain would complicate other underlying health conditions</p> <p>Patients in an urgent or emergent medical situation where time is of the essence and to delay treatment would jeopardize the patient's health status</p>	CMS69v9	65.7%	COVID-19 Pandemic	None	Include adults in the evaluation of this measure if they had any medical visit during the year, regardless of the nature of the visit. If more than one BMI is reported during the measurement period, use the most recent BMI to determine if the performance has been met.

Table	Line	UDS Measure Name	Brief Description	Denominator (Universe)	Numerator	Exclusions or Exceptions	eCQM # (for 2021 Report)	2020 National Average	Major Differences from 2019 to 2020	Major Differences from UDS to eCQM	Reminders
6B	14a	Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention	Percentage of patients aged 18 and older who were screened for tobacco use one or more times within 24 months and who received cessation counseling intervention if defined as a tobacco user	Patients aged 18 years and older seen for at least two medical visits in the measurement period or at least one preventive medical visit during the measurement period	Patients who were screened for tobacco use at least once within 24 months before the end of the measurement period, AND who received tobacco cessation intervention if identified as a tobacco user	Documentation of medical reason(s) for not screening for tobacco use or for not providing tobacco cessation intervention (e.g., limited life expectancy, other medical reason)	CMS138v9	83.4%	COVID-19 Pandemic	Denominator patient population and numerator are reported separately in the eCQM, but combined in the UDS	<p>Cessation counseling intervention for a tobacco user must occur at or following the most recent screening and before the end of the measurement year.</p> <p>Count in the numerator both patients with a negative screening result AND those with a positive screening who had cessation services provided</p> <p>Include all forms of tobacco, but exclude e-cigarettes, in the screening</p> <p>Include patients who receive tobacco cessation intervention by any provider, including:</p> <ul style="list-style-type: none"> Received tobacco use cessation counseling services, or Received an order (a prescription or a recommendation to purchase an over the counter [OTC] product) for a tobacco use cessation medication Are on (using) a tobacco use cessation agent

Table	Line	UDS Measure Name	Brief Description	Denominator (Universe)	Numerator	Exclusions or Exceptions	eCQM # (for 2021 Report)	2020 National Average	Major Differences from 2019 to 2020	Major Differences from UDS to eCQM	Reminders
6B	17a	Statin Therapy for the Prevention and Treatment of Cardiovascular Disease	<p>Percentage of the following patients at high risk of cardiovascular events aged 21 years and older who were prescribed or were on statin therapy during the measurement period</p> <p>Patients 21 years of age or older previously diagnosed with or currently have an active diagnosis of clinical atherosclerotic cardiovascular disease (ASCVD); or Patients 21 years of age or older who have ever had a fasting or direct low-density lipoprotein cholesterol (LDL-C) level greater than or equal to 190 mg/dL or were previously diagnosed with or currently have an active diagnosis of familial or pure hypercholesterolemia; or</p> <p>Patients 40 through 75 years of age with a diagnosis of diabetes with a fasting or direct LDL-C level of 70-189 mg/dL.</p>	<p>Patients 21 years of age and older with who have an active diagnosis of ASCVD or ever had a fasting or direct laboratory result of LDL-C greater than or equal to 190 mg/dL or were previously diagnosed with or currently have an active diagnosis of familial or pure hypercholesterolemia; or patients 40 through 75 years of age with Type 1 or Type 2 diabetes and with an LDL-C result 70-189 mg/dL recorded as the highest fasting or direct laboratory test result in the measurement year or the 2 years prior; with a medical visit during the measurement period</p>	Patients who are actively using or who received an order (prescription) for statin therapy at any point during the measurement period	<p>Patients who have a diagnosis of pregnancy</p> <p>Patients who are breastfeeding.</p> <p>Patients who have a diagnosis of rhabdomyolysis.</p> <p>Patients with adverse effect, allergy, or intolerance to statin medication.</p> <p>Patients who are receiving palliative care.</p> <p>Patients with active liver disease or hepatic disease or insufficiency.</p> <p>Patients with endstage renal disease (ESRD).</p> <p>For patients 40 through 75 years of age with diabetes who have the most recent fasting or direct LDL-C laboratory test result less than 70 mg/dL and are not taking statin therapy.</p>	CMS347v2	71.9%	COVID-19 Pandemic	None	<p>Current statin therapy use (including statin medication samples provided to patients) must be documented in the patient's current medication list or ordered during the measurement period.</p> <p>Do not count other cholesterol lowering medications as meeting the measurement standard—only statin therapy meets the measurement standard. Ensure patients are not counted in the denominator more than once. Once a patient meets one set of denominator criteria (check from first listed in Measure Description to last), he/she is included and further risk checks are not needed.</p> <p>Intensity of statin therapy or lifestyle modification coaching is not being assessed for this measure—only prescription of any statin therapy.</p>

Table	Line	UDS Measure Name	Brief Description	Denominator (Universe)	Numerator	Exclusions or Exceptions	eCQM # (for 2021 Report)	2020 National Average	Major Differences from 2019 to 2020	Major Differences from UDS to eCQM	Reminders
6B	18	Ischemic Vascular Disease (IVD): Use of Aspirin or Another Antiplatelet	Percentage of patients aged 18 years of age and older who were diagnosed with acute myocardial infarction (AMI), or who had a coronary artery bypass graft (CABG) or percutaneous coronary interventions (PCIs) in the 12 months prior to the measurement period, or who had an active diagnosis of IVD during the measurement period, and who had documentation of use of aspirin or another antiplatelet during the measurement period	Patients 18 years of age and older with a medical visit during the measurement period and who had an AMI, CABG, or PCI in the 12 months prior to the measurement period or who had a diagnosis of IVD overlapping the measurement period	Patients who had an active medication of aspirin or another antiplatelet during the measurement period	<p>Patients who had documentation of use of anticoagulant medications overlapping the measurement period</p> <p>Patients who were in hospice care during the measurement period</p>	CMS164v7	78.8%	COVID-19 Pandemic	None	Include in the numerator patients who received a prescription for, were given, or were using aspirin or another antiplatelet drug

Table	Line	UDS Measure Name	Brief Description	Denominator (Universe)	Numerator	Exclusions or Exceptions	eCQM # (for 2021 Report)	2020 National Average	Major Differences from 2019 to 2020	Major Differences from UDS to eCQM	Reminders
6B	19	Colorectal Cancer Screening	Percentage of adults 50– 75 years of age who had appropriate screening for colorectal cancer	Patients 50 through 75 years of age with a medical visit during the measurement period	<p>Patients with one or more screenings for colorectal cancer. Appropriate screenings are defined by any one of the following:</p> <ul style="list-style-type: none"> ▪ Fecal occult blood test (FOBT) during the measurement period ▪ Fecal immunochemical test (FIT)- deoxyribonucleic acid (DNA) during the measurement period or the 2 years prior to the measurement period ▪ Flexible sigmoidoscopy during the measurement period or the 4 years prior to the measurement period ▪ Computerized tomography (CT) colonography during the measurement period or the 4 years prior to the measurement period ▪ Colonoscopy during the measurement period or the 9 years prior to the measurement period 	<p>Patients with a diagnosis of colorectal cancer or history of total colectomy</p> <p>Patients who were in hospice care during the measurement period</p>	CMS130v9	40.1%	COVID-19 Pandemic	None	There are two FOBT test options: Guaiac fecal occult blood test (gFOBT) and the immunochemical-based fecal occult blood test (iFOBT - commonly known as a FIT test)

Table	Line	UDS Measure Name	Brief Description	Denominator (Universe)	Numerator	Exclusions or Exceptions	eCQM # (for 2021 Report)	2020 National Average	Major Differences from 2019 to 2020	Major Differences from UDS to eCQM	Reminders
6B	20	HIV Linkage to Care	Percentage of patients newly diagnosed with HIV who were seen for follow-up treatment within 90 days of diagnosis	Patients first diagnosed with HIV by the health center between October 1 of prior year through September 30 of the current measurement year and who had at least one medical visit during the measurement period or prior year	Newly diagnosed HIV patients that received treatment within 90 days of diagnosis. Include patients who: Were newly diagnosed by your health center providers, and Had a medical visit with your health center provider who initiates treatment for HIV, or had a visit with a referral resource who initiates treatment for HIV	None	no eCQM	81.4%	COVID-19 Pandemic	None	<p>Only include patients in the denominator who have never before been diagnosed with HIV anywhere</p> <p>Note that the identification of patients for this measure crosses years and may include prior year patients</p> <p>To confirm HIV diagnosis, patient must receive a reactive initial HIV test confirmed by a positive supplemental HIV (blood) test</p> <p>Medical treatment must be initiated within 90 days of HIV diagnosis (not just a referral made, education provided, or retesting conducted)</p>

7	3a-3f	Diabetes: Hemoglobin A1c (HbA1c) Poor Control (>9%)	Percentage of patients 18–75 years of age with diabetes who had hemoglobin A1c > 9.0% during the measurement period	Patients 18 through 75 years of age with diabetes with a medical visit during the measurement period	Patients whose most recent HbA1c level during the measurement year is greater than 9.0 percent or who had no test conducted during the measurement period	Patients who were in hospice care during the measurement period	CMS122v9	35.6%	COVID-19 Pandemic	None	<p>Include patients with an active diagnosis of Type 1 or Type 2 diabetes</p> <p>Include patients with active diabetes regardless of when first diagnosed</p> <p>Do not include patients with a diagnosis of secondary diabetes due to another condition (such as gestational diabetes) in the denominator</p> <p>Note: The higher the percentage of patients with Hba1c of 9.0 percent or over, the poorer the clinical performance</p> <p>Review crude prevalence rates by taking number with diabetes by race and ethnicity (Table 7) divided by total patients of same race and ethnicity (Table 3B)</p>

DISTRICT CLINIC HOLDINGS, INC.
BOARD OF DIRECTORS
January 26, 2021

1. Description: Patient Relations Dashboard Report

2. Summary:

This agenda item provides the following:

Quarterly Patient Relations Dashboard Q4 - 2021

3. Substantive Analysis:

For Quarter 4, 62 Patient Relations Occurrences occurred between 8 clinics, 2 mobile clinics and clinic administration. Of the 62 occurrences, there were 10 grievances and 52 complaints. The top 5 categories were Care and Treatment, Physician Related, Communication, Respect Related and Finance. The top 2 subcategories with 8 complaints and grievances in each were Poor Communication and Response Time issues.

There were also 24 compliments received across 7 clinics and clinic administration.

4. Fiscal Analysis & Economic Impact Statement:

	Amount	Budget
Capital Requirements	N/A	Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>
Annual Net Revenue	N/A	Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>
Annual Expenditures	N/A	Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>

Reviewed for financial accuracy and compliance with purchasing procedure:

N/A
Candice Abbott
VP & Chief Financial Officer

5. Reviewed/Approved by Committee:

N/A
Committee Name

Date Approved

6. Recommendation:

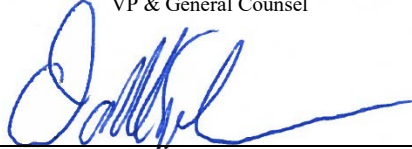

Staff recommends the Board approve the Quarterly Patient Relations Dashboard for Q4 2021.
